

Herbaceous perennial*Liliaceae (Lily Family)***Phenology:** flowering July to August.**Management Responsibility:** USFS (Coronado NF, Apache-Sitgreaves NF), Navajo Nation, White Mountain Apache Tribe.**Similar Species:** distinguished from other species of onions within its range by its broad, flat, rather blunt leaves, its bulbs on thick iris-like rhizomes, and its thick bulb coat of persistent parallel fibers.**Note:** palatable to livestock; heavily browsed when accessible. Habitat modification by removal of tree canopy may cause drying of site and loss of plants.**Reference:** USFWS and USFS, 1997.

Allium gooddingii

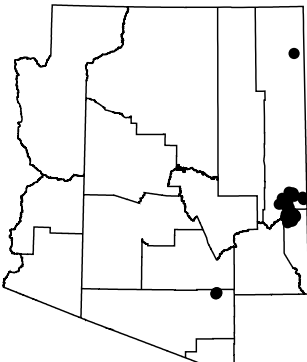

Peter Warren

Habitat: in spruce-fir forests and mixed conifer forests in moist, shady canyon bottoms and north-facing slopes, 7,500-11,250 ft (2285-3430 m) elevation.

USFWS

Range: White Mountains, Santa Catalina Mountains, and Chuska Mountains; also found in New Mexico.
