Executive Summary

Natural Area Consulting Management Services (Natural Area) was contracted by the City of Kalamunda to undertake a Level 1 flora and vegetation survey for a proposed clearing area for road widening along Stage 3 of Patterson Road, Pickering Brook (SLK 2.00 to SLK 3.70). Survey outcomes will inform the clearing permit process.

The survey aimed to determine:

- flora species present
- the extent and boundaries of vegetation type and condition
- the location of declared rare or priority flora and/or ecological communities
- the presence of threatened or priority fauna and their habitat, such as tree hollows.

Survey outcomes provided in this report will inform the environmental approvals process associated with a clearing permit application.

The level 1 flora and vegetation survey within the proposed boundary of the Patterson Road Stage 3 area, Pickering Brook confirmed:

- a total of 105 flora species present from 38 families
- a total of 17 weeds and 88 native flora species
- no priority or threatened flora species were found
- one vegetation type, Marri-Jarrah Woodland occurred within the site
- vegetation condition across the site ranged from Good to Excellent.

1.0 Introduction

Natural Area Consulting Management Services (Natural Area) was commissioned by the City of Kalamunda in October 2019 to undertake a level 1 flora and vegetation survey and threatened black cockatoo habitat assessment within a proposed clearing area along Patterson Road, Pickering Brook. The survey outcomes provided in this report will inform the environmental approvals process associated with a clearing permit application for the proposed road widening.

1.1 Location

The proposed clearing area of Patterson Road Stage 3 is to extend between SLK 2.00 to SLK 3.71, within the road reserve boundary, approximately 27 km south-east of the Perth Central Business District (Figure 1). The survey was carried out within the width of the road reserve.

1.2 Scope

Activities undertaken by Natural Area included:

- desktop database searches to identify potential conservation significant flora and fauna species potentially occurring within the proposed clearing area
- a level 1 flora survey to determine vegetation type and condition
- recording of flora species present, particularly threatened and priority species
- recording key habitat presence including tree hollows that could be used by endangered black cockatoos
- reporting outcomes of the survey and the implications of results.

2.0 Site Characteristics

The characteristics of a site has an influence on the flora, vegetation, fauna, and ecological communities present. Key characteristics of the proposed clearing area of Patterson Road Stage 3 are outlined in this section.

2.1 Regional Context

According to Interim Biogeographical Regionalisation of Australia (IBRA) descriptions, Patterson Road is located in the JAF01 – Northern Jarrah Forest subregion. This subregion occurs east of the Darling Scarp which is overlying granite and metamorphic rocks with an average elevation of 300 m. The Northern Jarrah Forest region is dominated by Jarrah-Marri forest on laterite soils and in the eastern area of the subregion is dominated by Wandoo-Marri woodland on clayey soil (Mitchell and Mitchell, 2001).

2.2 Climate

The climate experienced in the area is Mediterranean, with dry, hot summers and cool, wet winters.

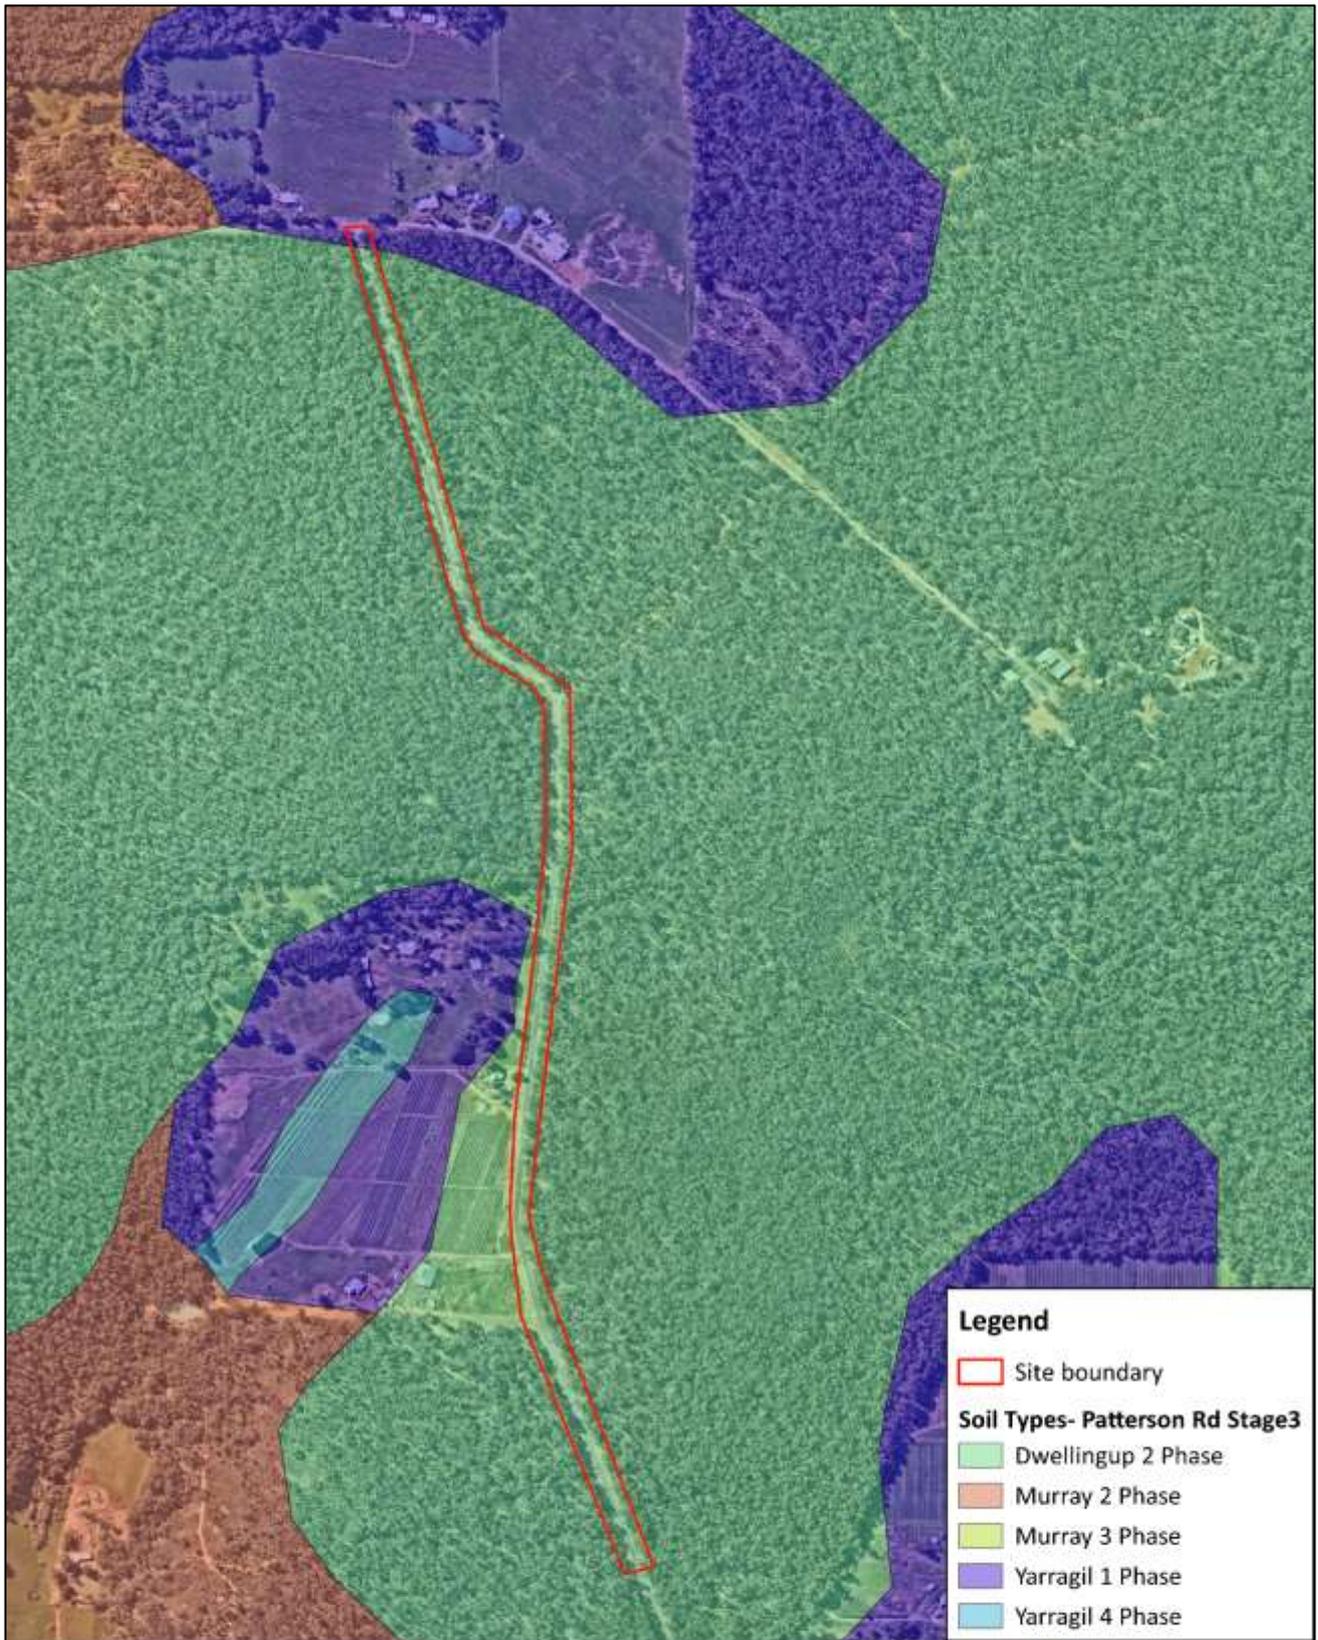

According to the Bureau of Meteorology (Perth Airport, Station ID 009021, 2019):

- average rainfall is 765.3 mm pa, with the majority falling between May and August;
- average maximum temperature ranges from 18.0 °C in winter to 31.9 °C in summer, with the highest recorded maximum being 46.7 °C;
- average minimum temperatures range from 8.0 °C in winter to 17.5 °C in summer, with the lowest recorded minimum being -1.3 °C; and
- predominant wind directions include morning easterlies and westerly sea breezes during summer months, with an average wind speed of 16.6 km/h and gusts of more than 100 km/h.

2.3 Topography and soils

Topography across the site ranges from 280 – 365 m AHD rising from the south to the north. Two soil types, Dwellingup 2 Phase (255DpDW2) soil and Yarragil 1 Phase (255DpYg1) are present on the site, identified using the NRInfo Portal (Department of Primary Industries and Regional Development, 2019, Figure 2).

Dwellingup 2 Phase soils are described as very gently to gently undulating terrain (<10%) with well drained, shallow to moderately deep gravelly brownish sands, pale brown sands and earthy sands overlying lateritic duricrust (Department of Primary Industries and Regional Development, 2019). Yarragil 1 Phase soils are described as very gentle to moderately inclined concave slopes, moderately well drained yellow duplex soils and yellow brown massive earth and gravels (Department of Primary Industries and Regional Development, 2019).

2.4 Vegetation Complex

The vegetation complex indicated by the WALGA Environmental Planning Tool (2019) as occurring within the site is the Dwellingup D2 and Yarragil 1 (WALGA, 2019). The Dwellingup D2 complex comprises of Jarrah and Marri dominated woodlands in upland areas (Hedde, Loneragan and Havel, 1980). The Yarragil Complex comprises of a mixture of open-forest of Jarrah and Marri which can include *Eucalyptus patens* (Swan River Blackbutt) and *Eucalyptus megacarpa* (Bullich). The vegetation complex of the site corresponds to the soils classification as shown in Figure 2.

2.5 Hydrology

No wetland or other water courses were identified within the study area through a search on the City of Kalamunda's IntraMaps (City of Kalamunda, 2019).

2.6 Cockatoo Habitat

According to the WALGA Environmental Planning Tool (2019), Patterson Road Stage 3 is located within a confirmed breeding and roosting area, and a potential feeding area for the Carnaby's Black Cockatoo.

3.0 Methodology

3.1 Objectives

The objective of the survey was to collect sufficient data to adequately assess the proposed clearing area against the ten clearing principles. This included undertaking a desktop review, determining flora species present, assessing vegetation type and condition, assessing the presence of key habitats which could be used by threatened black cockatoos.

3.2 Desktop and Literature Review

A desktop flora and vegetation survey was undertaken to determine:

- likely native and non-native flora and fauna species present
- current extent of native vegetation
- general floristic community types
- likely presence of threatened or priority flora and fauna species
- likely presence of any threatened or priority ecological communities.

The following databases were accessed to obtain relevant information:

- NatureMap (Department of Biodiversity, Conservation and Attractions, 2018d) (Appendix 1)
- Protected Matters Search Tool (Department of the Environment and Energy (DoEE), 2018a) (Cwlth) (Appendix 2)
- FloraBase (Department of Biodiversity, Conservation and Attractions, 2018b)
- Threatened and priority flora and ecological community database searches (Department of Biodiversity, Conservation and Attractions, 2018e).

Summary sheets of threatened flora potentially occurring in the area were created for quick reference in the field (Appendix 3).

3.3 On-ground Flora Methodology

Natural Area Botanists Sharon Hynes and Kylie Sadgrove traversed the site on the 16th October 2019, with key GPS data recorded using a handheld Samsung tablet loaded with GIS mapping software (Mappt), including:

- identification of flora species present by walking the site, including targeting declared rare and priority species indicated as potentially present during desktop assessments
- assessing vegetation type and condition across the site
- using a GPS to map significant species and boundaries of differing vegetation condition
- determining the presence of any further threatened or priority listed flora species and/or ecological communities listed under the *Biodiversity and Conservation Act 2016 (WA)* and/or the *Environment Protection and Biodiversity Conservation Act 1999 (Commonwealth)*
- locations of trees which have the potential to provide habitat in the form of hollows for cockatoos.

The flora and vegetation survey was conducted in accordance with *Technical Guidance- Flora and Vegetation Surveys for Environmental Impact Assessment* (Environmental Protection Authority, 2016). Samples were collected, or photographs taken of unfamiliar species to enable later identification.

3.3.1 Flora Species

Flora species were recorded on observation across the length of the site the site, with the list of potential declared rare or priority flora species used to guide targeted searches for those species (Appendix 5).

3.3.2 Vegetation Type

The vegetation type was determined using the structural classes described in *Bush Forever Volume 2* (Government of Western Australia, 2000), and records dominant over, middle and understorey species (Table 1).

Table 1: Vegetation structural classes

3.3.3 Vegetation Condition

Vegetation condition was assessed using the rating scale attributed to Keighery in *Bush Forever Volume 2* (Government of Western Australia, 2000). A Samsung tablet loaded with GIS mapping software (Mappt) was used to differentiate the locations of the vegetation condition across the site and assist with mapping outcomes (Table 2).

3	Very Good	Vegetation structure altered, obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
4	Good	Vegetation structure significantly altered by very obvious signs of multiple disturbances. Retains basic vegetation structure or ability to regenerate it. For

5 Degraded	Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.
6 Completely Degraded	The structure of the vegetation is no longer intact and the area is completely or almost completely without native species. These areas are often described as 'parkland cleared' with the flora comprising weed or crop species with isolated native trees or shrubs.

3.4 Limitations

The survey was carried out in spring the optimal time to survey native vegetation in the South West Botanical Region. However, certain limitations for the survey works still exist, including:

- database searches only provide an indication of what flora species may be present, with on ground surveys required to confirm those present
- the differing databases are reliant on information submitted via various reporting mechanisms, so all records of a flora species or ecological community in a specified area may not be complete
- on-ground surveys indicate species present at the time of the assessment, with species flowering at different times not always able to be identified
- not all species flower every year.

Despite these limitations, Natural Area believes 80 – 90% of flora species were identified.

4.0 Flora Survey Results

Survey works for the proposed clearing of Patterson Road Stage 3 included desktop and field activities, outcomes for both are provided in this section.

4.1 Desktop Survey

4.1.1 Significant Flora

A review of NatureMap identified 258 plant species which could potentially occur within a 5 km radius of the Patterson Road site. Of the species identified, NatureMap indicated 11 conservation significant flora species listed under the *Biodiversity Conservation Act 2016* (WA) as potentially occurring within 5 km of the site (Department of Biodiversity Conservation and Attractions, 2019d). A review of the Protected Matters Search Tool (PMST) (Department of the Environment and Energy, 2019) indicated 9 significant flora species listed under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) (Cwlth) as potentially occurring within a 5 km radius of the site.

A review of the DBCA's threatened and priority flora database indicated one Priority 4 species has been previously recorded within a 10 km buffer of the survey site. Of the 11 conservation significant species potentially found in the area, it was determined that the site conditions (soil type, drainage, location) may be suitable for nine (highlighted in green) of these species (Table 3).

4.1.2 Threatened Ecological Communities

A review of the PMST report indicated that there are no listed Threatened Ecological Communities that could potentially occur within the site. Threatened and priority flora and ecological community database search indicated that there are no known Threatened or Priority Ecological Communities within a 5km radius of the site (Department of Biodiversity, Conservation and Attractions, 2018e).

4.2 On-ground Flora Survey

4.2.1 Flora

A total of 105 flora species were identified from the October 2019 survey, from 38 families. Of these 17 were weeds and 88 were native species. No conservation significant flora species were found on site. Examples of native flora species are shown in Table 4, with weed species shown in Table 5. A complete flora list is provided in Appendix 5.

4.2.2 Vegetation Type

One vegetation type was recorded across the length of the site; Marri-Jarrah Woodland (Figure 3). This vegetation community is comprised of a woodland of *Corymbia calophylla* (Marri) and *Eucalyptus marginata* (Jarrah), with a middle story of *Xanthorrhoea preissii*, *Xanthorrhoea gracilis* and mixed shrub over an understory of mixed native herbs and sedges.

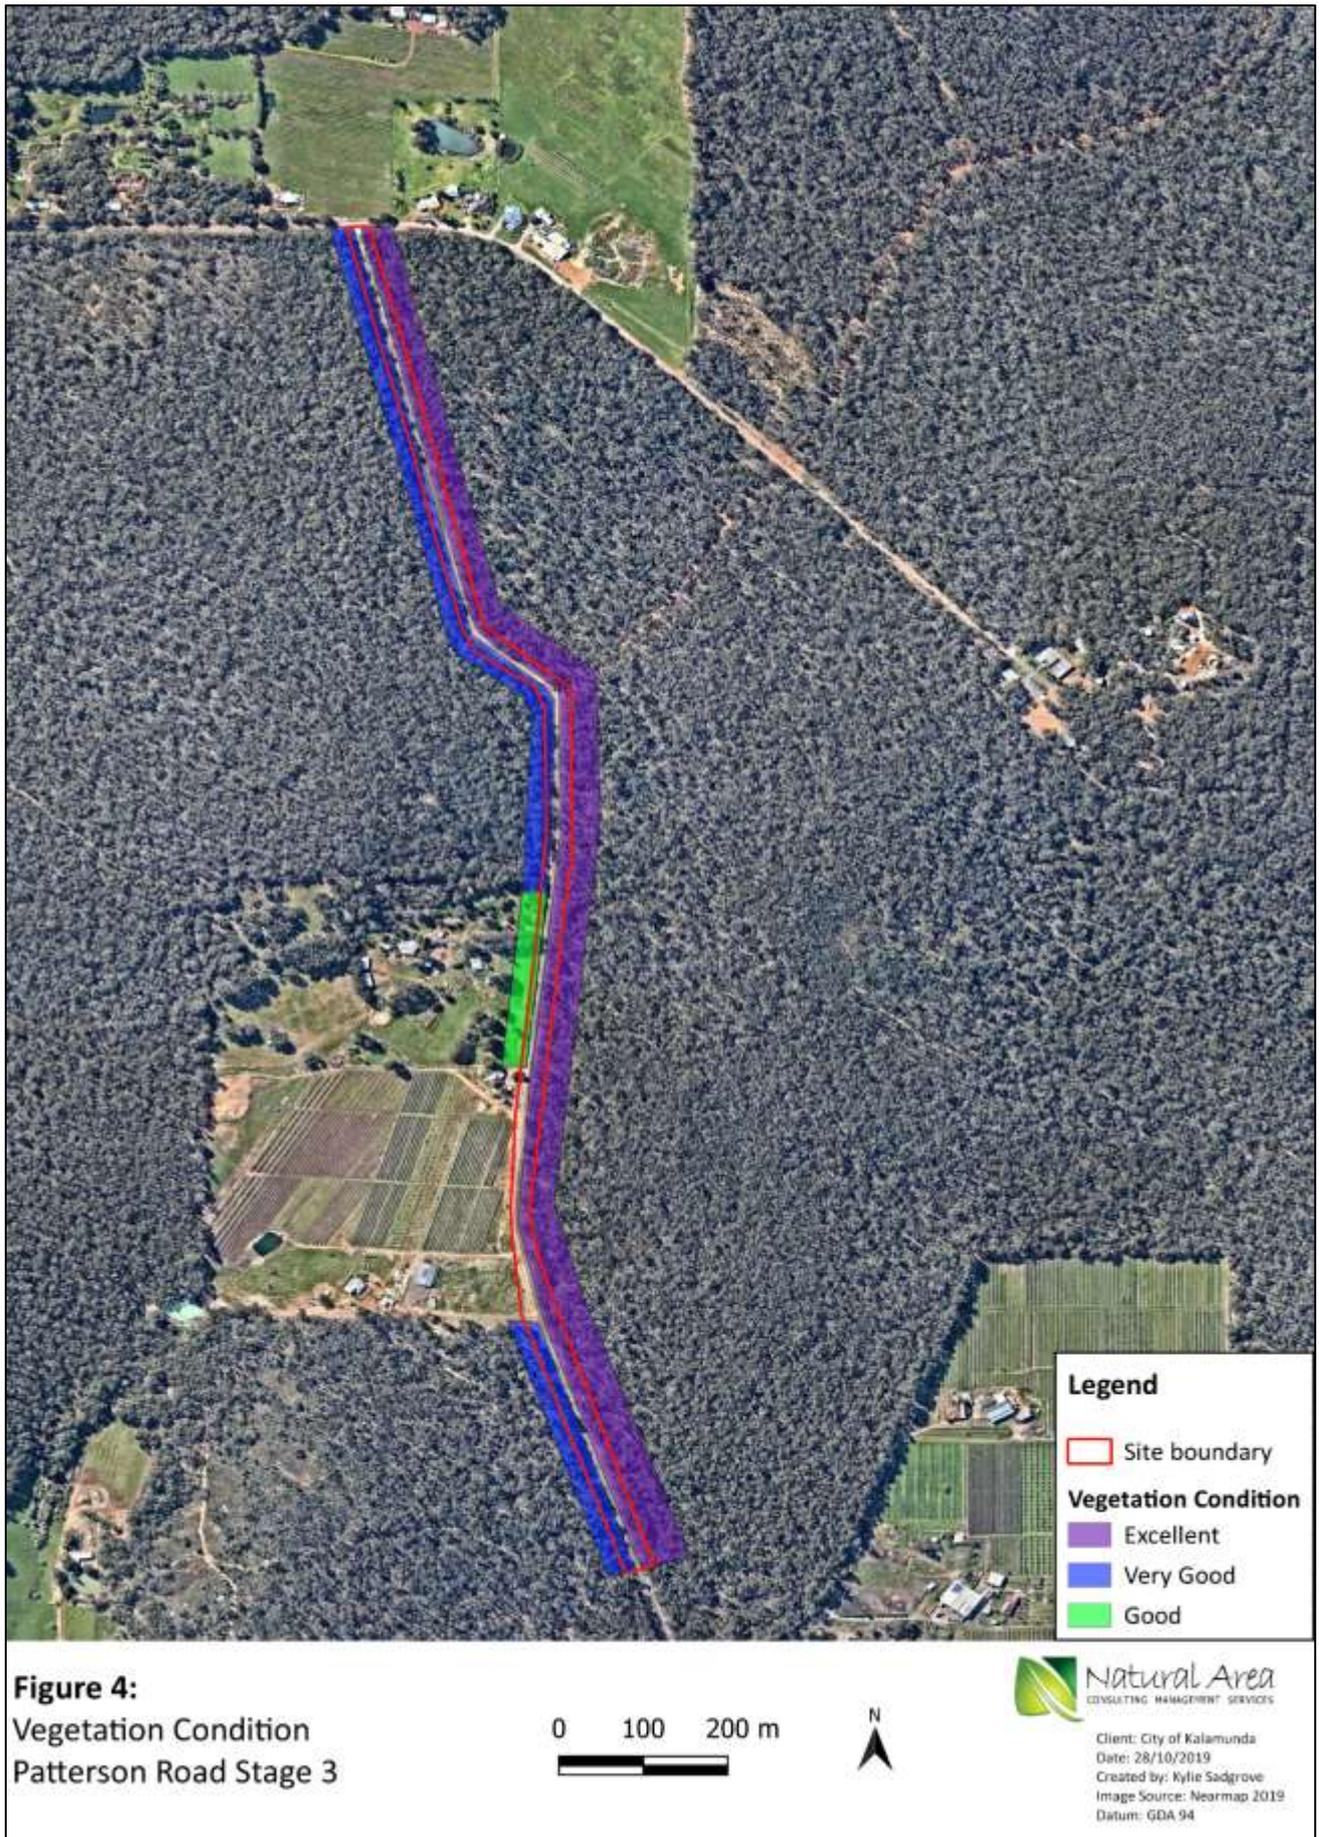

Figure 3: Marri-Jarrah Woodland at Patterson Road Stage 3, Pickering Brook.

4.2.3 Vegetation Condition

Vegetation condition across the site ranged from Good to Excellent (Figure 4). The area of Good vegetation occurred in front of the farmland property along the western side of the road. The remaining vegetation along the western side of the road was classified as Very Good. The majority of the site was in Excellent condition (63.85%, Table 6) which occurred along the eastern boundary of the road. Vegetation condition was not assessed in the cleared area in front of the farmland property as it did not contain remnant native vegetation. The borders of the vegetation condition map (Figure 4) have been extended past the proposed clearing area for ease of viewing.

Table 6: Vegetation condition

Area (ha)	2.75	1.38	0.17	0	0	4.31
Area (%)	63.84	32.1	4.06	0	0	100

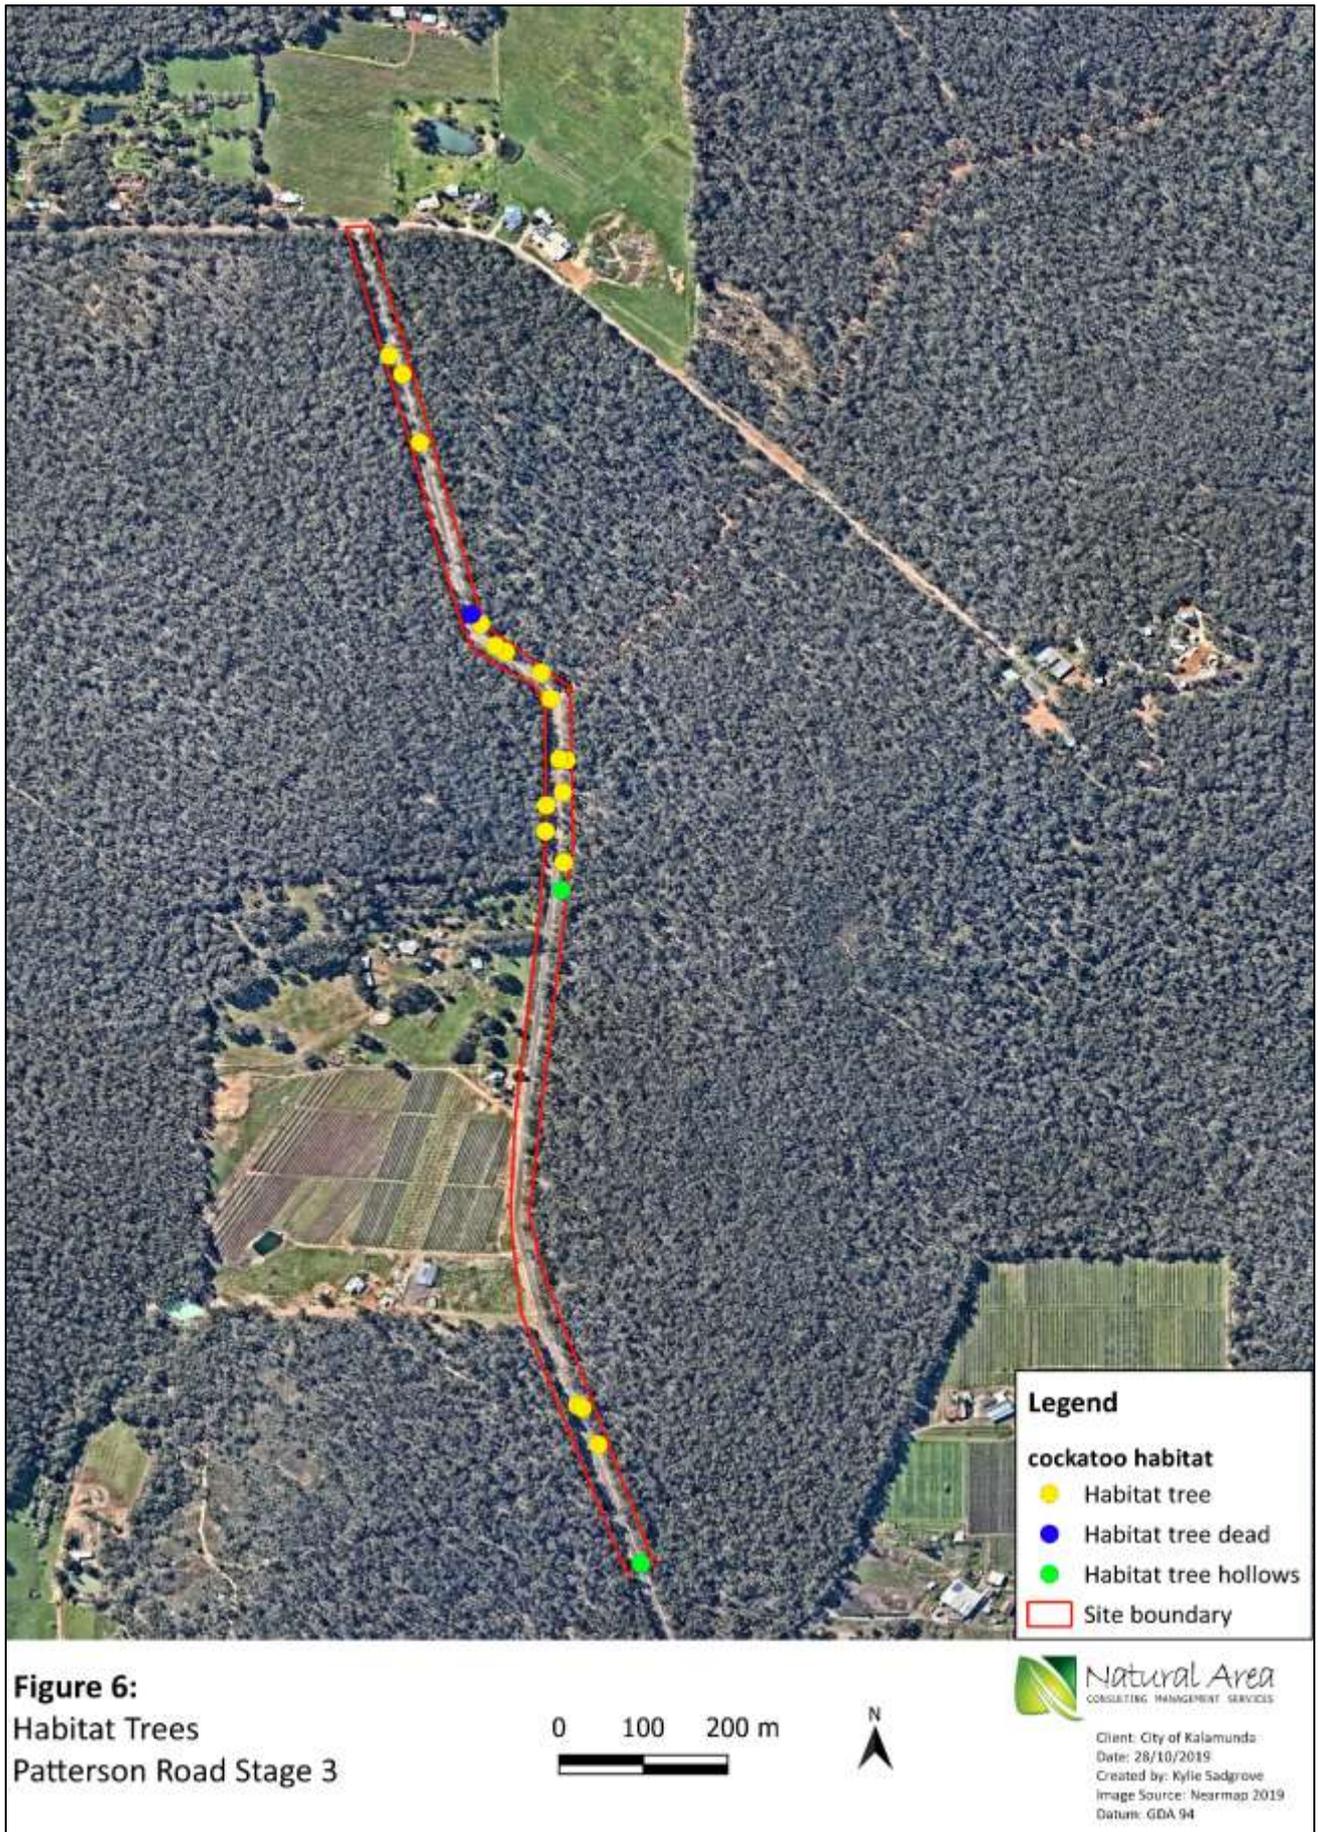

4.2.4 Cockatoo Habitat

Opportunistic observations noted 20 potential habitat trees, one of which was dead. These trees had a diameter at breast height of greater than 500 mm and have the potential to be used for roosting by threatened black cockatoos. Of these two contained hollows that appeared to be large enough to be utilised for nesting by endangered cockatoos with an entrance >100 mm wide (Figures 5 and 6). While conducting the survey no cockatoos were observed and no signs of feeding or other use were recorded.

Figure 5: Potential habitat trees/hollows for black cockatoos.

5.0 Implications of Results

5.1 Flora species

Natural Area's October 2019 survey at the site along Patterson Road Stage 3, Pickering Brook recorded 105 flora species from 38 families, 17 of which were introduced and 88 were native. One vegetation type was recorded, Marri-Jarrah Woodland with vegetation condition ranging from Good to Excellent within the survey area.

As a road reserve in a heavily vegetated area in the Perth hills, the survey area was adjacent to extensive areas of similar vegetation. Accordingly, the species recorded during the survey are representative of nearby vegetation (Figure 1). The condition of the vegetation is likely to be better within the broader vegetated area as the road acts to fragment the landscape and increases the potential for weeds to be present.

5.2 Significant Flora

No threatened or priority species were recorded during the on-ground October 2019 survey. While the DBCA database search of declared rare and priority listed flora species (2019e) noted the Priority 4 listed *Pimelea rara* was present approximately 200 m south west of the southern boundary of the site, it was not recorded during the survey. Two other records indicate the presence of this species more than 600 m to the east; all other records of significant flora are a minimum of 1.3 km from the survey site boundary.

5.3 Threatened Ecological Communities

No threatened ecological communities were present within the survey boundary.

5.4 Black Cockatoo Habitat

It is noted that Marri is a common food source for the Carnaby's Cockatoo, Baudin's and Forest Red-tailed Black Cockatoos species. The Carnaby's Cockatoo (*Calyptorhynchus latirostris*) is listed as endangered under the *EPBC Act 1999* (Cwlth), with the Forest Red-tailed Black Cockatoo (*Calyptorhynchus banksia naso*) and the Baudin's Black Cockatoo (*Calyptorhynchus baudinii*) listed as vulnerable; all are listed as threatened under the *Biodiversity Conservation Act 2016* (WA).

While there were potential habitat trees with hollows recorded on site no birds were observed within the hollows and no evidence of roosting or nesting was recorded during Natural Area's survey. The site has the potential to be used a source for foraging, particularly for Red-tailed Black Cockatoo as Marri is a preferred food source. An assessment of the referral guidelines for Black Cockatoos has been made for this site (Table 7) with the potential for high risk of significant impacts and referral is recommended. The area surveyed during October 2019, is likely to be greater than the total area to be cleared. While the recorded trees were located within the surveyed area, these may not occur within the proposed clearing boundary. As a result of this the environmental significance could vary as it is dependant on how many habitat trees are to be cleared.

Table 7: Referral guidelines for the 3 threatened Black Cockatoo species

Guideline		Comment
High risk of significant impacts: referral recommended	<ul style="list-style-type: none"> ▪ Clearing of any known nesting tree ▪ Clearing or degradation of any part of a vegetation community known to contain breeding habitat ▪ Clearing of more than 1 ha of quality foraging habitat. ▪ Clearing or degradation (including pruning the top canopy) of a known night roosting site ▪ Creating a gap of greater than 4 km between patches of black cockatoo habitat (breeding, foraging or roosting). 	<p>Patterson Rd Stage 3;</p> <ul style="list-style-type: none"> ▪ There was no observed black cockatoos or evidence of foraging at the time of the survey ▪ There are 20 potential habitat trees within the surveyed area, two of which had hollows large enough to be utilised by black cockatoos ▪ The area to be cleared is greater than 1 ha with vegetation condition ranging from Good to Excellent ▪ The site is located within a confirmed breeding and roosting area and a potential feeding area for Carnaby’s Black Cockatoo ▪ There are extensive bushland areas to the west and east of the site.
Uncertainty: referral recommended or contact the department	<ul style="list-style-type: none"> ▪ Degradation (such as through altered hydrology or fire regimes) of more than 1 ha of foraging habitat. Significance will depend on the level and extent of degradation and the quality of the habitat. ▪ Clearing or disturbance in areas surrounding black cockatoo breeding, foraging or night roosting habitat that has the potential to degrade habitat through introduction of invasive species, edge effects, hydrological changes, increased human visitation or fire. ▪ Actions that do not directly affect the listed species but that have the potential for indirect impacts such as increasing competitors for nest hollows. ▪ Actions with the potential to introduce known plant diseases such as <i>Phytophthora</i> spp. to an area where the pathogen was not previously known. 	<p>Patterson Rd Stage 3;</p> <ul style="list-style-type: none"> ▪ The site is located within a confirmed breeding and roosting area and a potential feeding area for Carnaby’s Black Cockatoo ▪ The area to be cleared is greater than 1 ha with vegetation condition ranging from Good to Excellent ▪ The area to be cleared follows the existing alignment of the road which has the potential to introduce invasive species and create edge effects

Guideline		Comment
Low risk of significant impacts: referral may not be required	<ul style="list-style-type: none"> ▪ Actions that do not affect black cockatoo habitat or individuals. ▪ Actions whose impacts occur outside the modelled distribution of the three black cockatoos. 	<ul style="list-style-type: none"> ▪ During the October 2019 survey no observed black cockatoos were present within the hollows and no evidence of roosting or nesting was found ▪ The site is located within a confirmed breeding and roosting area and a potential feeding area for Carnaby's Black Cockatoo

5.5 Assessment Against Clearing Principles

An assessment of information obtained during the October 2019 survey has been made against the Western Australian clearing principles. It is suggested that the clearing application may be at variance to two of the ten clearing principles (Table 8).

Table 8: Assessment against clearing principles

Clearing Principle	Comment
A Native vegetation should not be cleared if it comprises a high level of biological diversity.	<p>The area to be cleared may be at variance with this principle:</p> <ul style="list-style-type: none"> ▪ The majority of the vegetation to be cleared is in Very Good to Excellent condition ▪ The area of the proposed clearing area has a high level of species diversity, 88 native species were recorded during the October 2019 survey by Natural Area botanists ▪ There were no observed threatened or priority species recorded during the October 2019 survey by Natural Area botanists ▪ Flora and vegetation present within the survey boundary is consistent with extensive bushland areas adjacent to and in the broader area
B Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of, a significant habitat for fauna indigenous to Western Australia.	<p>The area to be cleared may be at variance with this principle:</p> <ul style="list-style-type: none"> ▪ A review of the information available on the WALGA Environmental Planning Tool identified that the area to be cleared is a confirmed breeding, roosting and potential feeding area for the Carnaby's Black Cockatoo ▪ During the October 2019 survey by Natural Area botanists, 20 habitat trees were recorded, with two having hollows present that could be used by black cockatoos ▪ No evidence of hollow use, roosting or feeding was noted during the survey.
C Native vegetation should not be cleared if it includes, or is necessary for the continued existence of, rare flora.	<p>The area to be cleared is not likely to be at variance with this principle:</p> <ul style="list-style-type: none"> ▪ During the October survey by Natural Area botanists, no conservation significant flora was identified within the clearing area ▪ The DBCA declared rare and priority listed flora database search indicated that there were no observations within the proposed clearing area; the closest record was the priority 4 listed <i>Pimelea rara</i> approximately 200 m to the south west of the site.
D Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of a threatened ecological community.	<p>The area to be cleared is not likely to be at variance with this principle:</p> <ul style="list-style-type: none"> ▪ No threatened or priority ecological communities were recorded. ▪ Threatened and priority flora and ecological community database search (Department of Biodiversity, Conservation and Attractions, 2018e) identified that there are no known Threatened or Priority Ecological Communities within a 5km radius of the site.

E	Native vegetation should not be cleared if it is significant as a remnant of native vegetation in an area that has been extensively cleared.	The area to be cleared is not likely to be at variance with this principle as there are very large areas of uncleared vegetation adjacent to the east and west of the proposed clearing area.
F	Native vegetation should not be cleared if it is growing in, or in association with, an environment associated with a watercourse or wetland.	The area to be cleared is not likely to be at variance with this principle as the site is no association with a watercourse or wetland (City of Kalamunda, 2019).
G	Native Vegetation should not be cleared if the clearing of the vegetation is likely to cause appreciable land degradation.	The area to be cleared is not likely to be at variance with this principle: <ul style="list-style-type: none"> ▪ The area proposed to be cleared runs adjacent to the existing alignment of the road and with the road reserve boundary
H	Native vegetation should not be cleared if the clearing of the vegetation is likely to have an impact on the environmental values of any adjacent or nearby conservation area.	The area to be cleared is not likely to be at variance with this principle: <ul style="list-style-type: none"> ▪ Nearby bushland areas are zoned parks and recreation (City of Kalamunda 2019) ▪ Not listed as a Bush Forever site ▪ Located outside the drinking water source protection area associated with Mundaring Weir
I	Native vegetation should not be cleared if the clearing of the vegetation is likely to cause deterioration in the quality of surface or underground water.	The area to be cleared is not likely to be at variance with this principle: <ul style="list-style-type: none"> ▪ No surface water courses were identified during the October 2019 survey by Natural Area botanists ▪ Any aquifers are likely to be fractured rock aquifers rather than unconfined or confined aquifers associated with the Swan Coastal Plain

¹ For NatureMap's purposes, species flagged as endemic are those whose records are wholly contained within the search area. Note that only those records complying with the search criterion are included in the calculation. For example, if you limit records to those from a specific datasource, only records from that datasource are used to determine if a species is restricted to the query area.

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected.

Information on the coverage of this report and qualifications on data supporting this report are contained in the caveat at the end of the report.

Information is available about [Environment Assessments](#) and the EPBC Act including significance guidelines, forms and application process details.

Summary

Matters of National Environmental Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

National Heritage Places:	None
Wetlands of International Importance:	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	None
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	22
Listed Migratory Species:	9

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <http://www.environment.gov.au/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Caveat

The information presented in this report has been provided by a range of data sources as acknowledged at the end of the report.

This report is designed to assist in identifying the locations of places which may be relevant in determining obligations under the Environment Protection and Biodiversity Conservation Act 1999. It holds mapped locations of World and National Heritage properties, Wetlands of International and National Importance, Commonwealth and State/Territory reserves, listed threatened, migratory and marine species and listed threatened ecological communities. Mapping of Commonwealth land is not complete at this stage. Maps have been collated from a range of sources at various resolutions.

Not all species listed under the EPBC Act have been mapped (see below) and therefore a report is a general guide only. Where available data supports mapping, the type of presence that can be determined from the data is indicated in general terms. People using this information in making a referral may need to consider the qualifications below and may need to seek and consider other information sources.

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species distributions have been derived through a variety of methods. Where distributions are well known and if time permits, maps are derived using either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc) together with point locations and described habitat; or environmental modelling (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where very little information is available for species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc). In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More reliable distribution mapping methods are used to update these distributions as time permits.

Only selected species covered by the following provisions of the EPBC Act have been mapped:

- migratory and
- marine

The following species and ecological communities have not been mapped and do not appear in reports produced from this database:

- threatened species listed as extinct or considered as vagrants
- some species and ecological communities that have only recently been listed
- some terrestrial species that overfly the Commonwealth marine area
- migratory species that are very widespread, vagrant, or only occur in small numbers

The following groups have been mapped, but may not cover the complete distribution of the species:

- non-threatened seabirds which have only been mapped for recorded breeding sites
- seals which have only been mapped for breeding sites near the Australian continent

Such breeding sites may be important for the protection of the Commonwealth Marine environment.

Appendix 4: Conservation Codes

Western Australia

Conservation Code	Name	Description
T	Threatened	Flora or fauna that is rare or likely to become extinct (Schedule 1 of the <i>Wildlife Conservation Act 1950</i>)
X	Presumed Extinct	Flora or fauna that is presumed to be extinct in the wild (Schedule 2 of the <i>Wildlife Conservation Act 1950</i>)
IA	International Agreement	Birds protected under international agreement (Schedule 3 of the <i>Wildlife Conservation Act 1950</i>)
S	Specially Protected	Other specially protected fauna (Schedule 4 of the <i>Wildlife Conservation Act 1950</i>)
<i>Schedule 1 species are ranked by DPaW according to their level of threat using IUCN Red List criteria</i>		
CR	Critically endangered	Species considered to be facing an extremely high risk of extinction within the wild
EN	Endangered	Species considered to be facing a very high risk of extinction within the wild
VU	Vulnerable	Species considered to be facing a high risk of extinction in the wild
<i>Species that have not been adequately surveyed for listing under Schedule 1 or 2 of the Wildlife Protection Act</i>		
1	Priority One	Poorly known species – known from one or a few collections or sight records (generally <5), on all lands not managed for conservation, such as road verges, urban areas, farmland, active mineral lease and under threat of habitat destruction or degradation.
2	Priority Two	Poorly known species – known from one or a few collections or sight records, some of which are on lands not under imminent threat of habitat destruction or degradation, such as national parks, conservation parks, nature reserves, State forest, vacant Crown land, water reserves and similar.
3	Priority Three	Poorly known species – known collections or sight records from several localities not under imminent threat, or from few but widespread localities with either large size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat.
4	Priority Four	Rare or near threatened and other species in need of monitoring.
5	Priority Five	Conservation dependent species that are not threatened but are subject to a specific conservation program, the cessation of which would result in them becoming threatened within five years.

Appendix 5: Flora Species List

A complete flora list is provided in the table below. *Denotes introduced species (weeds). Species are listed in alphabetical order by species name, with weeds first then natives.

Family	Species	Common Name
Asteraceae	<i>Arctotheca calendula</i> *	Cape Weed
Asteraceae	<i>Avena barbata</i> *	Bearded Oat
Poaceae	<i>Briza maxima</i> *	Blowfly Grass
Orchidaceae	<i>Disa bracteata</i> *	
Poaceae	<i>Ehrharta calycina</i> *	Perennial Veldt Grass
Poaceae	<i>Eragrostis curvula</i> *	African Lovegrass
Asteraceae	<i>Hypochaeris radicata</i> *	Flat Weed
Myrtaceae	<i>Leptospermum laevigatum</i> *	Victorian Teatree
Fabaceae	<i>Lupinus angustifolius</i> *	Narrowleaf Lupin
Oleaceae	<i>Olea europaea</i> *	Olive
Oxalidaceae	<i>Oxalis pes-caprae</i> *	Soursob
Caryophyllaceae	<i>Petrorhagia dubia</i> *	
Pinaceae	<i>Pinus radiata</i> *	Radiata Pine
Plantaginaceae	<i>Plantago lanceolata</i> *	Ribwort Plantain
Brassicaceae	<i>Raphanus raphanistrum</i> *	Wild Radish
Fabaceae	<i>Trifolium campestre</i> *	Hop Clover
Asteraceae	<i>Ursinia anthemoides</i> *	Ursinia
Fabaceae	<i>Acacia pulchella</i> var. <i>pulchella</i>	
Proteaceae	<i>Adenanthos barbiger</i>	
Hemerocallidaceae	<i>Agrostocrinum hirsutum</i>	
Casuarinaceae	<i>Allocasuarina fraseriana</i>	Sheoak
Poaceae	<i>Amphipogon debilis</i>	
Poaceae	<i>Austrostipa hemipogon</i>	
Proteaceae	<i>Banksia dallanneyi</i> subsp. <i>dallanneyi</i> var. <i>mellicula</i>	
Proteaceae	<i>Banksia grandis</i>	Bull Banksia
Pittosporaceae	<i>Billardiera fusiformis</i>	Australian Bluebell
Fabaceae	<i>Bossiaea aquifolium</i>	Water Bush
Fabaceae	<i>Bossiaea ornata</i>	Broad Leaved Brown Pea
Colchicaceae	<i>Burchardia congesta</i>	
Hemerocallidaceae	<i>Caesia micrantha</i>	Pale Grass-lily
Myrtaceae	<i>Calytrix depressa</i>	
Ranunculaceae	<i>Clematis pubescens</i>	Common Clematis
Haemodoraceae	<i>Conostylis setigera</i>	Bristly Cottonhead
Haemodoraceae	<i>Conostylis setosa</i>	White Cottonhead
Myrtaceae	<i>Corymbia calophylla</i>	Marri
Cyperaceae	<i>Cyathochaeta avenacea</i>	

Family	Species	Common Name
Goodeniaceae	<i>Dampiera linearis</i>	Common Dampiera
Fabaceae	<i>Daviesia decurrens</i> subsp. <i>decurrens</i>	
Fabaceae	<i>Daviesia rhombifolia</i>	
Restionaceae	<i>Desmocladus asper</i>	
Hemerocallidaceae	<i>Dianella revoluta</i>	Blueberry Lily
Droseraceae	<i>Drosera pallida</i>	Pale Rainbow
Myrtaceae	<i>Eucalyptus marginata</i>	Jarrah
Fabaceae	<i>Gompholobium polymorphum</i>	
Fabaceae	<i>Gompholobium preissii</i>	
Proteaceae	<i>Grevillea synapheae</i>	Catkin Grevillea
Haemodoraceae	<i>Haemodorum laxum</i>	
Proteaceae	<i>Hakea amplexicaulis</i>	Prickly Hakea
Proteaceae	<i>Hakea lissocarpha</i>	Honey Bush
Proteaceae	<i>Hakea ruscifolia</i>	Candle Hakea
Lamiaceae	<i>Hemigenia parviflora</i>	
Dilleniaceae	<i>Hibbertia acerosa</i>	Needle Leaf Guinea Flower
Dilleniaceae	<i>Hibbertia huegelii</i>	
Fabaceae	<i>Hovea chorizemifolia</i>	Holly-leaved Hovea
Asteraceae	<i>Hyalosperma cotula</i>	
Fabaceae	<i>Kennedia coccinea</i>	Coral Vine
Goodeniaceae	<i>Lechenaultia biloba</i>	Blue Lechenaultia
Cyperaceae	<i>Lepidosperma apricola</i>	
Cyperaceae	<i>Lepidosperma pubisquameum</i>	
Cyperaceae	<i>Lepidosperma scabrum</i>	
Myrtaceae	<i>Leptospermum erubescens</i>	Roadside Teatree
Ericaceae	<i>Leucopogon verticillatus</i>	Tassel Flower
Stylidiaceae	<i>Levenhookia pusilla</i>	Midget Stylewort
Campanulaceae	<i>Lobelia rhombifolia</i>	Tufted Lobelia
Asparagaceae	<i>Lomandra hermaphrodita</i>	
Asparagaceae	<i>Lomandra micrantha</i> subsp. <i>micrantha</i>	
Asparagaceae	<i>Lomandra preissii</i>	
Asparagaceae	<i>Lomandra purpurea</i>	Purple Mat Rush
Restionaceae	<i>Loxocarya cinerea</i>	
Zamiaceae	<i>Macrozamia riedlei</i>	Zamia
Fabaceae	<i>Mirbelia dilatata</i>	Holly-leaved Mirbelia
Rubiaceae	<i>Opercularia echinocephala</i>	Bristly Headed Stink Weed
Iridaceae	<i>Patersonia umbrosa</i>	Yellow Flags
Iridaceae	<i>Patersonia juncea</i>	Rush Leaved Patersonia
Apiaceae	<i>Pentapeltis peltigera</i>	
Proteaceae	<i>Persoonia elliptica</i>	Spreading Snottygobble
Rutaceae	<i>Philothea spicata</i>	Pepper and Salt
Phyllanthaceae	<i>Phyllanthus calycinus</i>	False Boronia

Family	Species	Common Name
Asteraceae	<i>Podotheca angustifolia</i>	Sticky Longheads
Phyllanthaceae	<i>Poranthera huegelii</i>	
Phyllanthaceae	<i>Poranthera microphylla</i>	Small Poranthera
Asteraceae	<i>Pterochaeta paniculata</i>	Woolly Waitzia
Poaceae	<i>Rytidosperma acerosum</i>	
Goodeniaceae	<i>Scaevola calliptera</i>	
Asteraceae	<i>Senecio diaschides</i>	
Fabaceae	<i>Sphaerolobium medium</i>	
Celastraceae	<i>Stackhousia monogyna</i>	
Stylidiaceae	<i>Stylidium araeophyllum</i>	Stilt Walker
Stylidiaceae	<i>Stylidium ciliatum</i>	Golden Triggerplant
Stylidiaceae	<i>Stylidium lineatum</i>	Sunny Triggerplant
Stylidiaceae	<i>Stylidium recurvum</i>	
Stylidiaceae	<i>Stylidium scariosum</i>	
Poaceae	<i>Tetrarrhena laevis</i>	Forest Ricegrass
Elaeocarpaceae	<i>Tetradlea hirsuta</i>	Black Eyed Susan
Orchidaceae	<i>Thelymitra crinita</i>	Blue Lady Orchid
Asparagaceae	<i>Thysanotus multiflorus</i>	Many-flowered Fringe Lily
Apiaceae	<i>Trachymene pilosa</i>	Native Parsnip
Hemerocallidaceae	<i>Tricoryne elatior</i>	Yellow Autumn Lily
Celastraceae	<i>Tripterococcus brunonis</i>	Winged Stackhousia
Rhamnaceae	<i>Trymalium ledifolium var. rosmarinifolium</i>	
Campanulaceae	<i>Wahlenbergia preissii</i>	
Xanthorrhoeaceae	<i>Xanthorrhoea gracilis</i>	Graceful Grass Tree
Xanthorrhoeaceae	<i>Xanthorrhoea preissii</i>	Grass Tree
Apiaceae	<i>Xanthosia candida</i>	
Asteraceae	<i>Xerochrysum macranthum</i>
