Container Sizes: d1 - 2-3/8" sq. x 5" deep d2 - 2-7/8" sq. x 5-1/2" deep d4 - 3-5/8" sq. x 6" deep			
Acacia pravissima	Slightly tender, dazzling evergreen small tree, yellow flowers in late winter. Full sun, dry. 15'	gal	\$18.00
Agapanthus 'Sue Crûg' (#52)	With distinctive 'smoke gets in your eye' very pale lavender flowers, large and flaring, with a numerous flower count atop sturdy 2' stems, this mid-season, durable and very pretty Windcliff selection is as durable and very pretty as our dear friend, Sue Wynn-Jones, for whom we honor with its name. She is also mid-season (aren't we all?). In full sun and well drained soils. Fully deciduous	d4	\$22.50
Aloe haworthioides	A rarely encountered Aloe forming low, dense rosettes of very hairy foliage and short spikes of orange flowers in mid-summer. Untried in the open ground, the Aloes are an enormous part of our terrace containerized plant collection adding good foliage and hummingbird attracting flowers throughout the spring and summer	d1	\$20.00
Beesia deltophylla DJHC 98447	Hinkley introduction into commerce from Emei Shan, Sichuan, evergreen clumping perennial with purple tinged new growth, white flowers, NO direct sun. Refined.	d2	\$8.00
Begonia baviensis DJHV 13034	One of the most startling of the Begonias I have collected in Vietnam, and successfully cultivated outside for numerous years, with bristly red stems, hairy leaves and large white flowers. Best cultivated in partial shade and provided some overstory protection, in cool humusy soils.	d4	\$18.00
Brachyglottis compacta	A fool proof, striking and drought tolerant evergreen shrub from New Zealand, forming a dense rounded shrub clad with glistening silver gray foliage, while clusters of yellow daisies appear on the end of each branch in mid-summer. Much too infrequently seen in PNW gardens.	d4	\$12.00
Calanthe discolor DJHC 610	Well, dis color is white but dat color is pink. This hardy, dependable and easy terrestrial orchid, collected in Sichuan Province in 1996, can be very variable in color, however this collection presents very pretty silvery white 'orchids' on stems to 10" above spreading colonies of semi-evergreen strap-like foliage, for semi shaded sites in cool, evenly moist, humus-rich, draining soils.	d4	\$22.50
Cardamine trifolia	An indispensable evergreen ground cover forming low, slowly spreading, weed smothering mats of dark green foliage and clean white flowers in late winter rising to 5". Self cleansing. Partial shade in evenly moist, draining soil. A Top Ten.	d2	\$8.00
Carex cumberlandensis 'Jacksboro'	Forming a tight 10" tall x 2' wide evergreen clump looking a doppelgänger to Liriope, great in mass or as a solitary specimen, this Tony Avent collection from Alabama, for shade or light shade, drought tolerant when fully established.	d2	\$12.00
Correa alba	Evergreen shrub for full sun and mild conditions and draining soil or containers (we successfully cultivate under a southern eve) with non-stop white flowers throughout winter, hummingbird attracting. 3'	d4	\$12.00

Name	Description	Size	Price
Container Sizes: d1 - 2-3/8" sq. x 5" deep d2 - 2-7/8" sq. x 5-1/2" deep d4 - 3-5/8" sq. x 6" deep			
Dichroa febrifuga	Historically a now well-documented medicinal in S. Asian pharmacognacy, the semi-deciuous shrub to 4' is also highly ornamental. Lovely blue flowers in early summer are replaced by metallic sapphire blue fruit held for months throughout late autumn and early winter. This represents Peter Wharton's collection from Guizhou Province in the mid 80's.	d4	\$18.00
Dierama adelphicum	A distinctive and truly lovely species of wandflower, collected by late great friends Rod and Rachel Saunders, forming vigorous mounds of evergreen grass like foliage to 18 in. early June, rich rose nodding bells atop 2 ft stems. Full sun, draining soils. Loveliness.	d1	\$8.00
Dierama dracomontanum	A charming, small and early Fairy Wand with clumps of foliage less than a foot from which slightly arrive above racemes of pink/salmon tubular flowers, often 6 full weeks before any other Dierama in the PNW. This is a foreground species, or meant for along pavers as taller plants will obscure and conquer. Full sun, draining soils.	d1	\$8.00
Disanthus ovatifolius DJHV 8084	First offering of a July, 2017 described species, a brilliant and hardy evergreen tree/tall shrub with arresting silver pink abaxial leaf surface and a burgundy blush to the foliage throughout the year. Collected in N. Vietnam 2008 initially as Loropetalum subcordatum, enjoying a briefly a new genus (Uocodendron whartonii). Unblemished by cold, site in bright overstory.	d4	\$125.00
Eucryphia moorei	A rarely seen but sincerely hardy Eucryphia from SE Australia possessing distinctively narrow leaflets and masses of pristine white flowers in late summer. Though native to moist shaded sites, it performs best in the PNW in sunny, well drained positions with supplemental water (this does not say much for the climate of the PNW....) 15'	d4	\$22.50
Fatsia polycarpa DJHT 12018	One of two clones growing at Windcliff, this 2012 collection near Alishan possesses deeply and rounded leaf lobes on foliage to 15" across on specimens ultimately to 15'. Very late panicles of white umbels do appear but only on the mildest of years will they develop. A truly sensational, boldly foliaged and very hardy broadleaved evergreen for z7b and warmer, in light shade and evenly moist soils.	gal	\$32.50
Fatsia polycarpa DJHT 99009	Taiwanese counterpart to Japanese Fatsia japonica, forming rounded evergreen tree/large shrub to 20' x 20', possesses very deeply lobed, evergreen leaves to 1' across. Flower panicles are too late for viable fruit in PNW. Taiwan 1999 Central Highlands. Lt shade, cool, rich soil.	gal	\$32.50
Fuchsia splendens	Suprisingly hardy, this Central American Fuchsia performs admirably in the Puget Sound region, with vigorous growth to 3.5', clad with stunning apricot and peach elongated tubes of flowers for a staggeringly long period in summer and autumn. The succulent fruit is considered one of the best Fuchsias for culinary use; popular in jelly.	d4	\$12.00

Container Sizes: d1 - 2-3/8" sq. x 5" deep d2 - 2-7/8" sq. x 5-1/2" deep d4 - 3-5/8" sq. x 6" deep			
Globularia trichosantha DHTU 0026	Hinkley, NE Turkey 2000. An endearing, tough as nails prostrate evergreen groundcover. Buttons of lovely blue rise above glossy foliage on 5" stems, best in full sun and sharp drainage.	d2	\$8.00
Grevillea 'Canterbury Gold'	A lovely and hardy hybrid Grevillea with an astoundingly long display of spidery yellow gold flower clusters starting in early March and continuing most of the growing season. Full sun in draining soil. 5' x 5' over time.	d2	\$12.00
Helichrysum 'Miel et Curry'	L'Helichrysum 'Miel et curry' est une immortelle au parfum de miel et de curry. Arom'antique présente cette plante et propose à la vente des immortelles bio. You get the driftA lovely, drought tolerant subshrub for full sun and draining soils.	d4	\$12.00
Hesperoyucca whipplei	So-called Spanish Bayonet or Lord's Candles of S. California is a relatively well known chaparral 'yucca' there but infrequently seen in the Pacific Northwest. Perfectly hardy in our climate, it must be afforded a full sun, sharply drained site in order to thrive in our winter moist climate. Spectacular towering stems carrying white tubular flowers in late summer will be produced on occasion.	d1	\$8.00
Hydrangea aff. chinensis DJHAP 18023	From the Mishmi Hills in NE India, a very clever form of this (suspected) species with colorful fertile flowers surrounded by decidedly jagged sterile florets, on compact shrubs to 4'. Light shade best in evenly moist soils.	d4	\$15.00
Hydrangea anom.ssp. anom. DJHG 11145	From Guizhou, handsome reddish blush to new foliage - very leathery leaves.	d4	\$18.00
Libertia ixioides 'Taupo Sunset'	Offering year-round allure, compact upright clumps sculpt narrow fans of stiff leathery blades, each uniquely painted in green, yellow, orange, purplish red and bronze-hued stripes. White airy blossoms in mid-summer.	d4	\$12.00
Libertia ixioides 'Goldfinger'	A superb evergreen 'Iris' from New Zealand, this with deep butterscotch colors throughout the year. Though sprays of white flowers appear in summer, this should primarily be considered a plant whose foliage is its dominant quality. Perfect complement for year round container plantings.	d4	\$15.00
Mukdenia rossii DJH 93046	Collections of this species made in S. Korea in 1993 when I did not fully realize what a beguiling creature this is, with maple like leaves forming low mounds and airy sprays of white in late winter on stems to 1', for full sun or light shade in moist to evenly moist soils. Larger leaves on this clone than others I have seen.	d4	\$15.00
Pachysandra axillaris 'Windcliff'	From my Sichuan 2000 collections, highly textural, stoloniferous groundcover to 12" for full or light shade with fragrant axillary racemes of white in late winter and again in the fall. Truly superb and comely ground cover, especially for problematic areas in the garden.	d4	\$12.00

Name	Description	Size	Price
Container Sizes: d1 - 2-3/8" sq. x 5" deep d2 - 2-7/8" sq. x 5-1/2" deep d4 - 3-5/8" sq. x 6" deep			
Phlomis fruticosa - small leaf form	Charming, drought tolerant evergreen shrub to 3' x 3' with felted gray green foliage and axillary clusters of yellow in spring through early summer. From a diverse genus of which we have taken a particular liking, this is one of the best.	d2	\$12.00
Phlomis italica	Of the many Phlomis I grow, this pink flowering species remains a favorite, with very pretty silver gray foliage and whorls of pink flowers on the axils of leaves along stems to 2.5'. Forming a subshrub, it can be left standing or cut hard to the ground during spring cleanup. No problem. Full sun and draining soils; fully drought tolerant when established.	d2	\$12.00
Pittosporum tenuifolium 'Elfin' PP#21822	This compact evergreen shrublet possesses slender black branches topped with small green elliptical leaves outlined in pale green, ultimately reaching an average landscape size of 2 by 2. Perfect textural relief for a small garden in full sun DO NOT PROPAGATE	d2	\$12.00
Pittosporum tenuifolium 'Marjorie Channon'	A slow-growing evergreen shrub of rounded pyramidal habit boasting beautiful, small, oval, gray-green leaves narrowly margined with cream, contrasting nicely against the dark stems provide a luminous and dense variegated foliage year-round. Full sun is best.	d2	\$12.00
Pittosporum tenuifolium 'Nanum'	A painfully slow cultivar to produce(don't worry about us....) but durable and quick to establish in the ground, forming a tight 2' mounds of small, grayish-green foliage, seemingly unconcerned of regional altercations with arctic outbreaks. Full sun best, in draining soils, really best.	d4	\$15.00
Pittosporum tenuifolium 'Oliver Twist'	A compact, upright airy, evergreen shrub to 8' or more with small silvery green leaves on thin black stems. Well-suited to use as a formal hedge, especially so in difficult areas. Full sun or light shade.	d2	\$12.00
Pittosporum tenuifolium 'Pirouette' PP#22024	A Suncrest Nursery introduction with an upswept armature brandishing large yellow variegated foliage and small purple flowers in spring, contrasting nicely with black stems forming a narrow evergreen shrub to 12' or more over time. Full sun best in draining soils. DO NOT PROPAGATE.	d2	\$12.00
Pittosporum tenuifolium 'Tasman Ruffles'	Narrow upright columns of textural silvery glistening foliage, to 8', one of the hardiest forms of this species, for full sun and draining soils.	d2	\$12.00
Podocarpus lawrencei 'Purple King'	The mountain plum-pine from Tasmania is a superb mounding conifer for the PNW, and especially so in forms that take on a rich bruise to the foliage in winter. This is one of the best, forming a 3' x 3' specimen, or somewhat taller, most effective in bright or full sun sites, in any draining soi. Easily pruned to shape or re-size.	d2	\$12.00
Podocarpus salignus HCM 98057	A most elegant small conifer with handsome narrow foliage and polite, dense and graceful format. Exceedingly rare in cultivaton; undeservedly so. 15'.	d4	\$15.00

Name	Description	Size	Price
Container Sizes: d1 - 2-3/8" sq. x 5" deep d2 - 2-7/8" sq. x 5-1/2" deep d4 - 3-5/8" sq. x 6" deep			
Rhodocoma capensis	A truly indispensable evergreen 'Restio' that forms a graceful and fluid specimen to 4.5' and as wide. The only one of its kind, dependably hardy in the PNW. Full sun and evenly moist but draining soils.	d1	\$12.00
Ruscus x microglossus	Durable, shade and drought tolerant and a cladodaceous delight to be shared with children of all ages (the flowers of this species seem to appear on top of the leaf which is so not correct. Google cladode. Don't waste my time asking). A superb low groundcover.	d4	\$18.00
Sinopanax formosanus DJHT 7095	First time offering of frequently asked about (hardest to propagate) plants in my garden, best described as polite, handsome cross between Fatsia and Tetrapanax. Monotypic, endemic to the mtns of Taiwan, hardy in the PNW and stunning, full sun or light shade in draining soils.	d4	\$45.00
Sophora microphylla 'Sun King'	Why is this small evergreen, winter flowering tree so rarely encountered? To 15', textural pinnate, black green leaves and in February and March, large nodding bells of excitedly toned butterscotch yellow. Full sun, draining soils in mild locations only.	d2	\$12.00
Trochodendron aralioides 'Big Bertha'	To our knowledge, the only named selection of the wheel tree, this from collections of the Taiwanese form of this species made in 2007. This forms a globular semi-dwarf shrub with the same handsome durable foliage and clusters of charming yellow 'parasols' in summer. An ideal selection for a distinctive hedge or screen, for light shade or full sun.	d4	\$18.00
Ugni molinae	One of my favorites of the evergreen myrtaceous shrubs from Chile, forming tight mounds of small, rounded, dark green leaves with clusters of very pretty pink flowers resulting in crops of tart, edible berries. Hugging the seaside cliffs of Chile, this is content in full sun and draining soils yet cool temperatures. 4'.	d4	\$18.00
X Didrangea Clone A - low (Hydrangea mac. x Dichroa feb.)	(Hydrangea mac.x Dichroa febrifuga) Attributes of both Hydrangea macrophylla and Dichroa febrifuga. Flowers of this selection will be as vibrant in color at Christmas as in June. A wonderful new addition to woody plants	d4	\$22.50
X Didrangea - Clone B - upright (Hydrangea mac. x Dichroa feb.)	(Hydrangea mac.x Dichroa febrifuga) Attributes of both Hydrangea macrophylla and Dichroa febrifuga. Flowers of this selection will be as vibrant in color at Christmas as in June. A wonderful new addition to woody plants	d4	\$22.50
Xanthocyparis vietnamensis DJHV 6033	Considered amongst the rarest conifers in the world and the most recently discovered (2003), forming pyramidal specimens to 10' with equal quantities of adult and juvenile bluish green foliage. Full sun. Draining soils. Hinkley, Vietnam, 2006	gal	\$45.00
