**NATIONAL AERONAUTICS AND SPACE ADMINISTRATION**

NASA Continuing Bibliographies are annotated and indexed compilations of abstracts of reports and journal articles on aerospace subjects. The subjects are selected for their relationship to current developments in the space program and in response to an established interest by the aerospace community. Continuing Bibliographies are updated periodically by supplements.

This bibliography was prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by the Technical Information Services Company.

NASA SP-7011 (64)

# AEROSPACE MEDICINE AND BIOLOGY

A CONTINUING BIBLIOGRAPHY  
WITH INDEXES

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA Information System during May, 1969.

*Scientific and Technical Information Division*

**NATIONAL AERONAUTICS AND SPACE ADMINISTRATION**

WASHINGTON, D.C.

JUNE 1969

This document is available from the Clearinghouse for Federal Scientific and Technical Information (CFSTI), Springfield, Virginia, 22151, for \$3 00

# INTRODUCTION

*Aerospace Medicine and Biology* is a continuing bibliography which, by means of periodic supplements, serves as a current abstracting and announcement medium for references on this subject. The publication is compiled through the cooperative efforts of the Aerospace Medicine and Biology Bibliography Project of the Library of Congress (LC), the American Institute of Aeronautics and Astronautics (AIAA), and NASA. It assembles, within the covers of a single bibliographic announcement, groups of references that were formerly announced in separate journals, and provides a convenient compilation for medical and biological scientists. Additional background details for this publication can be found in the first issue, NASA SP-7011, which was published in July, 1964. Supplements are identified by the same number followed by two additional digits in parentheses.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the earth's atmosphere or in interplanetary space. References describing similar effects on biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis will be placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion. The contents of this issue are comprised of abstracts that were prepared by the three contributing organizations.

Each entry consists of a standard citation accompanied by its abstract. It is included in one of three groups of references that appear in the following order:

- a. NASA entries identified by their *STAR* accession numbers (N69-10000 series);
- b. AIAA entries identified by their *IAA* accession numbers (A69-10000 series), and
- c. LC entries identified by a number in the A69-80000 series.

Many of the abstracts included in this publication have been reproduced from those appearing in *STAR* and *IAA*. This procedure, adopted in the interests of economy and speed, has introduced some variation in size, style, and intensity of type.

# AVAILABILITY OF DOCUMENTS

## Availability of this Bibliography

Copies of *Aerospace Medicine and Biology* (NASA SP-7011) and its supplements are available to the public from the Clearinghouse for Federal Scientific and Technical Information, Springfield, Virginia 22151, for \$3 each. Copies are available on initial distribution without charge to the following:

- 1 NASA Offices, Centers, contractors, subcontractors, grantees, and consultants;
- 2 Other U S Government agencies and their contractors,
- 3 Libraries in the United States that have arrangements with NASA to maintain collections of NASA documents for public use,
- 4 Other organizations in the United States having a need for NASA documents in work related to the aerospace program, and
- 5 Foreign government or academic organizations that have established appropriate reciprocal arrangements with NASA

## STAR Entries

### Availability of NASA Documents

NASA documents are identified by an asterisk in the *STAR* Entries section. NASA documents that have been microfiched<sup>(1)</sup> (identified by the # sign in the *STAR* Entries section) are available on microfiche without charge to an organization eligible to receive *Aerospace Medicine and Biology* without charge.

### Availability of Non-NASA Documents

Non-NASA documents are those documents that do not carry an asterisk in the citation. Department of Defense documents (identified by the "AD" number in the citation and indexes) are available, subject to a service charge, in hard copy or microfiche from the Clearinghouse for Federal Scientific and Technical Information, Springfield, Virginia 22151. Microfiche copy of DOD reports will continue to be available to Defense Documentation Center users at no cost from the Defense Documentation Center, Cameron Station, Alexandria, Virginia 22314. National Lending Library (NLL) for Science and Technology translations are available from NLL at the price stipulated in the citation. Requests for purchase should be addressed to:

National Lending Library for Science and Technology  
Boston Spa, Yorkshire, England

Dissertations selected from Dissertation Abstracts are available in xerographic copy (HC) and on microfilm for sale from University Microfilms, Inc., Ann Arbor, Michigan, 48106. All requests should cite the author and Order Number as they appear in the citation. Note that the dissertations are provided on microfilm and not microfiche. Other non-NASA documents are publicly available as indicated in the citation. Those documents which have been microfiched are available on microfiche without charge only to NASA Offices, Centers, contractors, subcontractors, and consultants.

## How to Obtain Microfiche

If you are registered with NASA and eligible to receive reports as described above, send the completed *Document Request* (Facility Form 492) to:

NASA Scientific and Technical Information Facility  
P O Box 33  
College Park, Maryland 20740

(1) A microfiche is a transparent sheet of film, 105 x 148 mm in size, capable of containing up to 72 pages of information reduced to micro images (not to exceed 20:1 reduction).

If you are not registered with NASA and wish to receive information concerning registration, request *Registration Form- Technical Publications* (Facility Form 713) from the NASA Scientific and Technical Information Facility at the address given above. Others may obtain microfiche copies by purchase from

Clearinghouse for Federal Scientific and Technical Information  
(CFSTI)  
Springfield, Virginia 22151

### **U S. Government Sales Agencies**

Publications with a CFSTI availability statement in the citation are sold in hard copy and microfiche copy by

Clearinghouse for Federal Scientific and Technical Information  
(CFSTI)  
Springfield, Virginia 22151

The following unit price has been established by CFSTI: \$3.00 for hard copy, \$0.65 for microfiche.

Publications with a SOD availability statement in the citation are sold in hard copy by Superintendent of Documents, U S Government Printing Office (SOD)  
Washington, D C 20402

NASA documents available from the SOD are also available from CFSTI at the SOD price given in the citation.

NOTE: Documents announced without specific availability statement may be requested from the issuing activity.

Bibliographic information, e.g., report number, etc., rather than the NASA accession number (i.e., N69-12345), should be provided when requesting a document from other than NASA.

### **IAA Entries**

All cited documents are available from the AIAA Technical Information Service as follows: Paper copies are available at \$3.00 per document up to a maximum of 20 pages. The charge for each additional page is \$0.25. Microfiche are available at the rate of \$0.50 per microfiche for documents identified by the symbol # following the accession number. A number of publications, because of their special characteristics, are available only for reference in the AIAA Technical Information Service Library. Minimum air-mail postage to foreign countries is \$1.00.

Please refer to the accession number, e.g., A69-13193, when requesting documents. Address all inquiries and requests to

Technical Information Service  
American Institute of Aeronautics and Astronautics, Inc  
750 Third Avenue, New York, N Y 10017

For further details please consult the *Introductions* to *STAR* and *IAA* respectively.

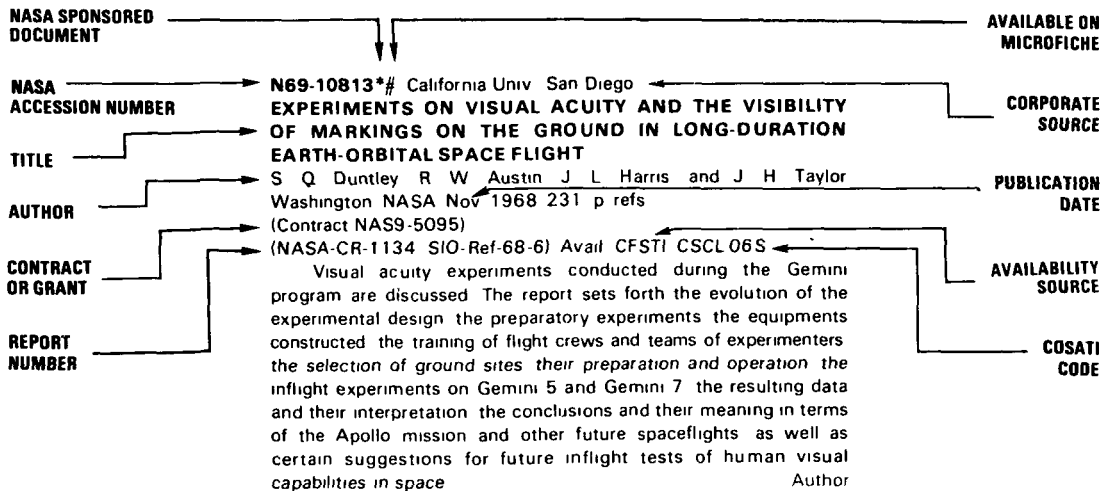

### **LC Entries**

Articles listed are available in the journals in which they appeared. They may be borrowed or consulted in libraries maintaining sets of these journals. In some instances reprints may be available from the journal offices.

**N69-19608\*#** Bellcomm, Inc., Washington, D. C.  
**LAUNCH-MAN SEQUENCING FOR EXTENDED MISSION  
EFFECTIVENESS STUDY**  
L. D. Nelson 16 Dec 1968 27 p  
(Contract NASw-417)  
(NASA-CR-100321, TM-68-1033-6) Avail CFSTI CSCL06S

The possible man mission resupply schedules that exist subject to a set of fixed constraints and capable of several sets of desired properties are determined. Those schedule types which maximize various measures of effectiveness are singled out. Three of the fixed constraints aid in defining an initial segment of a man mission resupply schedule. The derived eleven initial segments partition all admissible mission profiles into eleven classes, the classes and the schedules are analyzed via their initial segments. The analyses are performed by constructing charts exhibiting the capabilities of the initial segments with respect to the 54 sets of desired properties, reducing the charts by deleting every initial segment less capable than some remaining segment, and extracting the maximum duration entry for each set of desired properties. Other measures of effectiveness analyzed are number of astronauts exposed, mission duration/number of launch vehicles and number of astronauts/number of launch vehicles. Author

**INFORMATION PROCESSING IN THE FUNCTIONAL  
VISUAL FIELD [INFORMATIEVERWERKING IN HET  
FUNKTIONEEL GEZICHTSVELD]**

A. F. Sanders Dec 1967 13 p refs Transl into ENGLISH of the Rept No IZF-1967-6, 1967 16 p  
(NASA-TT-F-11408, IZF-1967-6) Avail CFSTI CSCL06P

It was found that performance in a number of visual tasks does not linearly decline as a function of visual angle. Instead, there are stepwise drops at two visual angles, which prove to be the boundaries of the areas where inspection by means of peripheral vision and eye movements are sufficient to obtain optimal performance. The drops are explained in terms of strategies in processing visual information, which are thought to vary from grouping signals at small visual angles to successive handling at very large angles. This theory is reevaluated in the light of more recent notions on visual coding and recoding. The relation between grouping and perceptual organization is especially considered. It is

concluded that earlier reported work is restricted to the macrostructure of the functional visual field. Author

**RADIOLOGICAL PROTECTION PROBLEMS OF TRITIUM**  
E. Dietrich and L. A. Koenig [1968] 13 p refs Transl into ENGLISH from Atompraxis (Germany) no 13, 1967 p 454-457 (NP-tr-1703) Avail CFSTI

The properties of tritium that are important in radiological protection are described. The hazards from tritium are internal since it emits very low energy beta particles. Tritium can enter the body via the lungs, the skin, and the intestinal tract. Most frequently tritium is taken in as water or water vapor. Radiological protection measurement problems are described and the most common methods of solving them are discussed. Protection factors relative to tritium-containing water vapor are examined. The techniques used at the Karlsruhe research reactor for tritium control are summarized. NSA

**TRANSMISSION SCANNING WITH SUP 99M TC AND SUP  
137 CS**

James A. Sorenson and Russell C. Briggs 22 Jul 1968 3 p ref Presented at the Annual Meeting of the Radiological Soc of Am Chicago, Ill.  
(Contract AT(11-1)-1422)

(COO-1422-24, CONF-681201-1) Avail CFSTI  
Methods are described for making transmission images of the human chest using <sup>99m</sup>Tc or <sup>137</sup>Cs as the radiation source. A rectilinear scanner was used. Good transmission scans were obtained with a 10 mCi <sup>99m</sup>Tc source but the 6 hr half-life of <sup>99m</sup>Tc requires that a new source must be prepared each day. The high energy of a <sup>137</sup>Cs source resulted in poor contrast between bone, water, and air space. NSA

**A SYSTEMS ANALYSIS OF A REGENERATIVE CABIN  
ATMOSPHERE CONTROL SYSTEM**  
Robert D. Averill (M.S. Thesis—Va Univ) Aug 1968 135 p refs (NASA-TM-X-61517) Avail CFSTI CSCL06K

A systems analysis of a regenerative cabin atmosphere control system of the type suitable for earth-orbiting manned missions up to 1 year in length is presented. A typical atmospheric control system was selected based on recent studies of the most suitable components which were currently available. An extensive review of the literature indicated that very few pertinent references were available on the subject of the closed-loop response of atmospheric control systems for life support. A dynamic nonlinear

**N69-19646**

model of the cabin atmosphere control system was developed and this was simplified to a small-exursion linear model for purposes of applying classic stability criteria. The nonlinear model was programmed on an electronic analog computer and sample cases were run at various conditions. The study demonstrated that the cabin atmosphere control system model was basically stable but that recovery from large transients was marginal due to component limiting. Author

(Contract NASw-1695)

(NASA-TT-F-12125) Avail CFSTI CSCL06A

The content of volatile fatty acids and hydroxy acids in the seeds and leaves of oil-bearing plants is investigated as a function of the various temperature conditions under which the plants mature. The sunflower poppy, and flax were the plants used in the tests. The results of the tests are summarized. It was found that lower temperatures facilitate the accumulation of fatty acids, and that the leaves are apparently the primary source of low fatty and hydroxy acids for the mature seeds. Author

A program of metabolic studies was carried out with quantitative procedures during the past decade with a variety of radioisotopes and labeled compounds. These studies demonstrated the capabilities of labeled pharmaceuticals, not only for kinetic studies, but also for diagnostic and localization purposes. Data display options included digital scans, computer-analyzed scans and photoscans. The radioisotopes used included  $^{198}\text{Au}$  colloids,  $^{18}\text{F}$ - $^{52}\text{Fe}$  and  $^{59}\text{Fe}$  as ferrous citrate,  $^{99}\text{Tc}$  as sulfur colloid,  $^{99}\text{Tc}$  pertechnetate and  $^{85}\text{Sr}$ . Seven features of the quantitative scanning method are illustrated with both research and diagnostic examples. Author (NSA)

Boris Mandrovsky In its Foreign Sci Bull Vol 5 No 2 Feb 1969 p 1-12 refs (See N69-19843 09-34)

Avail CFSTI

A one year sealed chamber experiment conducted in the Soviet Union is described. Its purpose was to determine the ability of human subjects to survive on artificial life support systems in a chamber of limited size for extended periods of time. Air and water were regenerated by physicochemical life support systems. Food consisted of vacuum-dried products and fresh vegetables from a 'cosmic' greenhouse. The success of the experiment was considered to be of value in solving the problem of supporting human life beyond the confines of the earth. Author

**CORRELATION STUDY OF THE SIMULATION OF GEMINI EXTRAVEHICULAR ACTIVITY WITH FLIGHT RESULTS**

Harry L Loats Jr, G Samuel Mattingly and G M Hay  
Washington NASA Feb 1969 199 p refs

(Contract NAS1-7142)

(NASA-CR-1146, ERA-67-7) Avail CFSTI CSDL 22A

The water immersion simulation of the Gemini EVA utilized full-scale mockups of the Gemini vehicle including portions of the Agena target vehicle with valid replicas of ancillary EVA equipment such as tools, astronaut maneuvering unit, etc. All important items were maintained in a neutrally buoyant condition. Bio-instrumentation was incorporated into the Gemini flight suits and continuous voice and film records were obtained. The water immersion simulation of the Gemini extravehicular activity provided a valid training time line for performance of complex extravehicular tasks and provided adequate measures of the level of work entailed. A second capability evidenced as a result of the program was the method for evaluating various competitive hardware concepts such as tools and motion restraints. The technique used in the preflight evaluation and training was to perform the simulation run with ERA subjects prior to actual performance of the training run by the astronaut. This technique permitted pre-evaluation of hardware in a repetitive manner and served to assess the validity of the water simulation mode. Factors such as drag-damping and orientational stability were compensated by variation of the mockup orientation and configuration. Author

Evidence supports the hypothesis that eye movements serve to improve acuity By measuring eye movements during a simple acuity task and during a control non-acuity task we have shown that certain patterns of eye movement are characteristic of acuity tasks Similarly, specific patterns of eye movement are generated during spatial localization tasks The observations provide circumstantial evidence for the existence of mechanisms by which eye movements mediate acuity and spatial localization information Through a comparison of acuity for stabilized retinal images with acuity for normal retinal images we have found that eye movements improve acuity very slightly at most, and that even this small improvement may be adequately accounted for by the residual fadeout effects commonly observed during prolonged viewing of stabilized images Dissert Abstr

(Contract F44620-67-C-0045)  
(AD-680763 RM-5843-PR) Avail CFSTI CSCL 5/9

A probability model was developed for aircrew ratios that accounts for unscheduled as well as scheduled sorties Considered are factors of aircraft and crew utilization reserve crew requirements and unscheduled sortie requirements A Poisson distribution is assumed for the number of unscheduled sorties and a probability distribution is assumed for the number of planes per sortie Formulas are derived for the number of scheduled flights during the flying period for a generalized crew ratio for the additional crews expected to be scheduled and for variance in number of additional crews A JOSS program is given for calculating aircrew ratios based on the model The basic parameters are (1) sortie rate per day per aircraft (2) proportion of time a crew is scheduled to fly (3) proportion of time a crew is scheduled in reserve Tables are provided for determining the crew ratios when these parameters are varied It can be concluded from the model that crew ratios increase as (1) the proportion of unscheduled sorties increases (2) crew unavailability increases and (3) sortie rates increase Also, reserve crew scheduling affects crew sensitivity when the reserve scheduling proportion is relatively high Author (TAB)

**BEHAVIORAL AND CIRCULATORY RESPONSES TO X-IRRADIATION DELIVERED AT 200 RADS PER MINUTE TO WHOLE BODY AND TRUNK ONLY** Technical Report, Jun -Nov 1967  
Paul H Chapman Sep 1968 13 p refs  
(AD-680843 SAM-TR-68-111) Avail CFSTI CSCL 6/18

Macaca mulatta monkeys performing a continuous avoidance task received high energy x-irradiation delivered to either whole body or trunk only at a dose rate of 200 rads per minute Prior to and during the 88-minute period of irradiation, performance and blood pressure were monitored in both groups of subjects Results

support the concept that at this dose rate of radiation exposure immediate behavioral changes seen after absorption of relatively low superlethal doses reflect radiation effects on structures located within the trunk of the subject No significant synergism between head and trunk effects appears to exist At higher doses, prominent signs of direct central nervous system damage determine the behavioral effect A phase of partially reversible hypotension is demonstrated after 1,200 to 1,600 rads are delivered at this dose rate This hypotension appears to be due largely to an effect of radiation on trunk structures Author (TAB)

A general picture is presented of the entire human and animal central nervous system Three factors determine the general structure and functional organization of the central nervous system (1) the character and location of the receptors of the given organ, (2) the character and location of neurons forming the connections between afferent and efferent formations of the nervous system (3) the character and distribution of the efferent apparatus The structure of the cortex of the cerebral hemispheres is studied in the following subchapters (1) the convolutions of the cerebral hemispheres (with illustrations of the inner and outer surfaces) (2) cyto- and myelo-architecture, and (3) myelo-architecture of the cortex It is stated that the grey matter is richer in blood vessels than the white matter and that the density of the capillary network is related to the number of nerve cells It is also stressed that the blood circulation in the brain and the spinal cord is mutually dependent on the circulation of the cerebrospinal fluid Author

Research was conducted on the origin of circadian movement periodicity and the significance of light cycling while temperature and other external conditions were maintained constant and at suitable levels. Different types of specimens with good nyctitropic activity and among these primarily deciduous leaves were taken into consideration. A few results are summarized below. The nyctitropic movements of the leaves and blossoms irrespective of whether they are carried out as the result of growth of variation are photonastic or thermonastic reaction phenomena which occur because of the daily change of illumination and/or temperature. Accordingly the nyctitropic movements disappear in plants which are brought into constant illumination and temperature and do not appear at all in plants which were raised at a constancy of illumination and temperature. After the elimination of the nyctitropic movements the organs are however only without movement if autonomous movements leave them which where they are present, occur as a rule in a much shorter rhythm.

Studies have been made of the toxicology and chemistry of nitrogen trifluoride tetrafluorohydrazine chlorine trifluoride bromine pentafluoride and oxygen difluoride. Lethality of each agent by inhalation has been determined as well as estimates of lethality after intraperitoneal administration. Experimental evidence suggests that the lethal effect of interhalogens is by corrosive local destruction of pulmonary surfaces, resulting in failure of gas exchange. Oxygen difluoride is thought to pass intact into the pulmonary cells where it reacts with biochemical reducing systems to ultimately cause cell death and structural failure. The nitrogen fluorides both cause intrinsically lethal levels of methemoglobin formation but other pharmacologic activity by these compounds or their derivatives may also contribute to their toxic activity.

A revised Primate Equilibrium Platform (PEP II) was designed and constructed to further investigate the effects of pulsed ionizing radiation on the equilibrium function. Twenty rhesus monkeys were trained to maintain a platform-horizontal position by the manipulation of a joy stick. Thirteen of the primates received an approximate midhead dose of 1,000 rads and 6 received an approximate midhead dose of 2,500 rads. One animal was omitted from the final results owing to a technical problem. After irradiation, 13 animals were tested for 1 hour and the remaining 6 animals were tested for 3 hours as these were actually two separate experiments 4 months apart. The major dependent variable was the time spent on horizontal per trial. Results demonstrated a definitive dose-level effect in the occurrence of early performance decrement. The operational significance of this finding as well as the recovery phenomenon seen in all cases, indicates the importance of continued research in this area.

Wavelength discrimination functions were measured with square-wave grating test objects in which alternate sets of bars were illuminated with two different wavelengths. When both wavelengths are made equal in brightness, the wavelength difference required to detect the grating increases monotonically with grating spatial frequency. Since this relation is approximately constant across the visible spectrum, the shape of the wavelength discrimination function tends to be preserved at high spatial frequencies, although much higher wavelength differences are needed to detect the high frequency gratings. Introducing a detectable brightness mismatch between the two wavelengths results in (1) a reduction of the wavelength difference needed to detect a hue difference between adjacent grating bars and (2) a minimum in the threshold wavelength difference versus spatial frequency function. Under these conditions, wavelength difference no longer increases monotonically with spatial frequency. The resulting functions resemble those previously reported for threshold luminance contrast versus spatial frequency. The relation of these results to form detection and to lateral inhibition is discussed. Author (TAB)

Recommendations for a portable battery of tests to assess human mobility in full-pressure suits are presented. The literature was reviewed to determine the types of instruments and tests employed by prior investigators. Task analyses were performed on three advanced vehicles to determine the body member-movement families most frequently involved. A set of tests and measurements is suggested for those member-movement families found to be most frequently involved in advanced flight. Necessary future steps for realizing the portable battery are suggested. The test battery recommended includes the Purdue Peg Board for finger dexterity, a specially designed apparatus for the strength of various body movements, a single dimension tracking task for various coordination tests, a Leighton Flexometer, and direct measurement devices for range of movement and static anthropology measurements. Continued success in coping with the space environment has led to increased crewman confidence in his ability to perform useful work during extraterrestrial missions. Future missions will require advanced suit/life-support-system concepts. Such a concept might logically take the form of a space suit for extravehicular activity with an integrated environmental control system. A design study of this concept has been performed and drawings prepared in sufficient detail to permit fabrication of a working model in a suitably equipped model shop. Integration of the environmental control system within the hard torso of the suit assembly resulted in a system having a packaging density approaching 80 percent and able to pass through a 27 inch diameter hatch. The system will support a crewman working at 375 Kcal/hour for an indefinite time to a recharge in space capability. Author (TAB)

**APPLICATION OF THE METHOD OF CHARACTERISTICS FOR THE CALCULATION OF FLOW AROUND BLUNTED CONES BY A SUPERSONIC STREAM OF AIR**

R A Gzhelyak et al, 24 May 1968, 14 p refs. Transl into ENGLISH from Vychislitel'naya Tsentra, Sb. Rabot (Moscow) no. 7, 1967, p. 197-205.

(AD-681268 FTD-HT-23-40-68) Avail CFSTI CSCL 20/4

This article deals with the application of the method of characteristics to calculations of a supersonic region of the flow near a blunt body, and is based on the available data obtained from the detailed analyses of dissociation and ionization processes taking place behind a shock wave. Boundary conditions on the body and shock wave are used in the form which coincides with the case of a perfect gas with constant heat capacities because all physicochemical processes are considered frozen when passing through a shock front. Calculations of the flow field between the body and shock wave were carried out progressively by regions bounded by the reflected characteristics. The results of the calculations of the air flow past blunt cones are presented as an illustrative example and are compared with those for an equilibrium flow. The comparison of pressure and density distributions along blunt cones is presented in graphical form. TAB

**THE CONNECTION OF METRICS OF VISUAL AND AUDIO SPACES FOR A METHOD OF TRANSFORMING AN IMAGE INTO SOUND**

V G Grishin, 3 May 1968, 10 p refs. Transl into ENGLISH from the book Vsesoyuznaya Nauchn Sessiya Posvyashchennaya Dnyu Radio (220) Sekts Bioniki Dokl, Moscow, 1966, p. 55-60. (AD-681260 FTD-HT-23-1666-67) Avail CFSTI CSCL 6/4

The author elsewhere proposed and studied experimentally methods for image-to-sound conversion aiming at unburdening the vision of operators. It is of interest to study the given transformation algorithm from the point of view of general criteria of the pattern recognition theory without direct connections with operator psychology. Consequently the criteria, such as the interval between the classes of images and metric parameters of classes in N-dimensional index spaces within which one can realize (as points) arbitrary classes are investigated mathematically. Technical limitations are compared with the results of mathematical simplifications of the exact theory. Author (TAB)

**THE EFFECT OF ATTENTION ON AUDITORY EVOKED POTENTIALS**

Lynn C Oatman Oct 1968 48 p refs  
(AD-681207 HEL-TM-15-68) Avail CFSTI CSCL 6/16

Click-evoked potentials were recorded from unanesthetized cats with electrodes chronically implanted in the auditory cortex cochlear nucleus and round window The clicks (irrelevant stimuli) were presented continuously as background before, during and after the presentation of a visual discrimination task (relevant stimuli) which attempted to alter the attentive state of the animals The mean peak-to-peak amplitudes of averaged click-evoked responses from six adult female cats were significantly smaller during attention to the visual discrimination stimuli when compared with the pre-discrimination and control periods This relationship was present at all electrode placements for five experimental animals with middle ear muscles cut as well as one control animal with middle ear muscles intact The results suggest that during attention a central inhibitory mechanism independent of middle ear muscles modifies click-evoked responses possibly via the olivo-cochlear bundle which terminates on the hair cells in the cochlea Author (TAB)

First a method of representing heuristics as production rules is developed which facilitates dynamic manipulation of the heuristics by the program embodying them This representation technique permits separation of the heuristics from the program proper provides clear identification of individual heuristics is compatible with generalization schemes and expedites the process of obtaining decisions from the system Second procedures are developed which permit a problem-solving program employing heuristics in production rule form to learn to improve its performance by evaluating and modifying existing heuristics and hypothesizing new ones either during a special training process or during normal program operation Third the above-mentioned representation and learning techniques are reformulated in the light of existing stimulus-response theories of learning and five different S-R models of human heuristic learning in problem-solving environments are constructed and examined in detail Experimental designs for testing these information processing models are also proposed and discussed Finally the feasibility of using the aforementioned representation and learning techniques in a complex problem-solving situation is demonstrated by applying these techniques to the problem of making the bet decision in draw poker This application, involving the construction of a computer program demonstrates that few production rules or training trials are needed to produce a thorough and effective set of heuristics for draw poker Author (TAB)

The ears of twenty-five people having normal hearing were tested by a single-descent pulse-count procedure of threshold determination. Pulse trains were produced by a modified telephone dial which keyed a manual audiometer. Six frequencies were tested. Results were compared with thresholds obtained using a fixed-frequency instrument of the Bekesy type. No significant differences were found between threshold measures made by the two methods. Test-retest by the pulse-count procedure indicated that reliability compared favorably with that of other threshold measures. The test is recommended for use in clinical audiometry particularly where assurance is needed that the subject hears at least at a given level. Among examples of its uses are testing candidates for flight training and bone-conduction testing to predict results of middle ear surgery. Author (TAB) .

An investigation has been undertaken of a novel method for the dehumidification of air that would be of particular utility in manned space enclosures. The method relies on the unique permeation behavior of gas vapor mixtures through microporous membranes under a pressure gradient. Under appropriate conditions a microporous membrane can become virtually semipermeable to the vapor component (water) of a gas-vapor mixture (humid air). A search was made for the most suitable microporous membrane for this purpose. The fundamental characteristics of the permeation process were studied for selected membrane materials. Prototype dehumidification units were then constructed of the best membrane material a porous silica glass and tested. A prototype approximating a one-man capacity was submitted for evaluation. (Contract DADA17-67-C-7168)  
(AD-680967) Avail CFSTI CSCL 6/12

An oral image intensifier with peripheral equipment was designed and prototyped. The device utilizes a small number of short X-ray pulses which form an image inside the mouth on a phosphor covering the end of a fiber optic bundle. The fiber optic bundle is curved and carries the low light level image outside of the mouth to a small image intensifier which amplifies the image to a visual level. A closed circuit TV system further amplifies the image and presents it on a monitor. When the project is completed the entire system will fit into one or two medium sized suitcases. Author (TAB)

Studies were performed in which mammalian mucociliary apparatus has been characterized under normal conditions following exposure to three irritant gases i.e. 100 per cent oxygen ozone(O<sub>2</sub>) and nitrogen dioxide (NO<sub>2</sub>). Investigations were made in normal and treated animals providing physical electrophysiological, biochemical and morphologic data of effects due to exposure. A method for in vitro microscopic observation of viable cilia and adjacent mucus blanket has been described in terms of ciliary beat and movement of particles embedded in the mucus. In vitro volumetric estimation of mucus thickness was compared to electrical resistance measurements in the attempt to provide an in vivo method to determine mucus depth alterations in treated animals. Polarographic studies of oxygen dependent enzymes were carried out on pooled stripped epithelial tissue of untreated animals and comparison made with tissues exposed to ozone and nitrogen dioxide. Exposure to 100 per cent oxygen caused a significant but selflimiting decrease in mucus velocity and viscosity. Acute exposure to nitrogen dioxide (35 and 75 micrograms per kilogram) caused marked dose dependent changes in velocity and viscosity. Exposure to 0.5 ppm ozone for a 14 day period resulted in general mucostasis and elevated viscosity levels. Author (TAB)

A discussion of the mathematical techniques and physicochemical concepts involved in the construction of certain types of biological models for use in computer simulation The basic tools employed are a mathematical method and a computer program to calculate the composition of multiphased chemical systems given the values of certain combinations of state-determining parameters (chemical inputs temperature pressure) A steady-state approach is used because the scientific basis of thermodynamics is better developed than that of kinetics the mathematical treatment is easier and many biological systems are either in or closely approach steady states in their chemical composition Selection of a physiological function or subsystem to be investigated depends on (1) the availability of technological tools (2) established data (3) whether it is conveniently factorable from a larger system so that it can be studied over a range of conditions when removed from its normal environment (4) no feedback effects as a result of changes in the subsystem An illustrative model of respiratory gases interacting with an aqueous phase is constructed Author (TAB)

Robert M Paul and George S Melville, Jr Sep 1968 14 p refs (AD-680844, SAM-TR-68-110) Avail CFSTI CSCL 6/18

An attempt was made to provide radioprotection of the Macaca mulatta primates by the use of 2-(1 decylamino) ethanethiosulfuric acid, a long chain, lipid-soluble compound. The animals were divided into seven groups: two drug control groups, one radiation control group, and four treatment groups. Each treatment group received a different dosage of drug or had a different latent period between administration of the drug and total-body irradiation. Clinical parameters were monitored and one animal from three of the treatment groups as well as two drug controls were necropsied and examined for signs of radiation damage or drug toxicity. Survival times were compared between treated animals and controls. Results indicate that this compound given as described does not afford the predicted degree of radioprotection. Author (TAB)

**N69-20826** Michigan State Univ East Lansing **VOWEL RECOGNITION THRESHOLD AS A FUNCTION OF TEMPORAL SEGMENTATION**

Richard LaVern Powell (Ph D Thesis) 1968 140 p Avail Univ Microfilms HC \$6.60/Microfilm \$3.00 Order No 68-11089

The purpose of this study was to determine the vowel recognition threshold as a function of temporal segmentation for certain vowels. Previous studies had suggested three milliseconds as the vowel recognition threshold as a function of temporal segmentation. Each of the vowels was recorded when phonated by a speaker sitting in a sound treated room. A Lissajous figure produced on an oscilloscope as well as a 125 Hz tone presented through earphones aided the speaker in attaining vowels with 125 Hz fundamentals. These vowels were each presented ten times to eight doctoral students with normal hearing for validation. A modified psychophysical method of minimal change was selected as the means for attaining the vowel recognition threshold as a function of temporal segmentation. Dissert Abstr

Energy mobilization in autotrophic grown hydrogen bacteria derives ultimately from the oxidation of hydrogen. Oxygen consumption is thus a measure of the amount of energy delivered to the biosynthetic process, and the ratio of the rate of oxygen consumption over the rate of CO<sub>2</sub> consumption is a measure of the efficiency of the biosynthetic process. The consumption ratio (O/C) of cell suspensions of *Hydrogenomonas eutropha* was studied with particular reference to the growth rate. The best efficiencies (O/C between 2 and 3) were observed with cultures growing at the maximum growth rate. When the rate of growth was limited by the supply of inorganic nutrients or by CO<sub>2</sub>, a less efficient conversion was obtained (O/C values between 3 and 5). An evaluation of gas consumption characteristics suggested that under excellent growth conditions the oxidative and assimilatory activities are well balanced, and that under these conditions about 5 moles of ATP are expended in the conversion of 1 mole of CO<sub>2</sub> to new cell material. **PILOT RESPONSE TO PERIPHERAL VISION CUES DURING INSTRUMENT FLYING TASKS**

A Howard Hasbrook and Paul E Young Feb 1968 22 p refs (FAA-AM-68-11) Avail CFSTI

To more closely associate the visual aspects of instrument flying with that of contact flight a study was made of human response to peripheral vision cues relating to aircraft roll attitude Pilots ranging from 52 to 12 000 flying hours experience were tested in a multi-engine aircraft simulator Data on aircraft bank angle, heading altitude peripheral vision cue signals, pilot eye movement and additional workload accomplishment were obtained during simulated flights involving a typical instrument flying maneuver Results suggest that substantial gains can be achieved in instrument flying capability by use of peripheral vision cues as they relate to provision of continuous roll attitude (bank angle) information The data also indicate such cues may be useful in preventing inadvertent entry into steep banks and subsequent loss of control when turbulence prevents visual interpretation of the conventional attitude indicator Author

Motion sickness as provoked by parabolic flight maneuvers and induced by active head movements during the hypergravity phases in certain subjects did not occur in any of the five subjects without functional labyrinths Among the 25 normal pilot-type subjects great inter- and intra-individual differences were found in susceptibility to motion sickness under the different force environments used in this study Acute motion sickness developed in four subjects merely as a result of the oscillations of g-load encountered in the parabolic maneuvers while the remaining 21 were symptom free These 21 and the most resistant subject among the other four were tested on other and separate occasions to determine the effect upon their susceptibility of standardized head movements during (1) the hypergravic phase (2) the weightless phase of the parabola while they were restrained in an aircraft seat and (3) the weightless phase while they were rotated in a chair Four of the six subjects tested under condition 1 were completely unaffected Head movements during weightlessness under

condition 2 provoked severe symptoms in five and moderate symptoms in one of twelve subjects tested The 15 subjects rotated in weightlessness under condition 3 revealed either a marked positive or negative change in susceptibility relative to that measured by a similar method under terrestrial conditions Author

Avail CFSTI

The problem of recognition of the terminal state of an automaton is investigated in this article. Let us assume that a completely defined noninitial automaton which is a sealed black box is given and that the experimenter can obtain information about the state of this automaton only by supplying input letters and observing the output letters. On the basis of these observations the experimenter must determine the state in which the investigated automaton is found that is the state of the automaton after the effect of the last input letter on it. The procedure for determining the terminal state of an automaton after introducing the appropriate finite series of input letters and observing the results at the output of the automaton is called an experiment in recognition of the terminal state or simply an experiment. The experiment is said to be homogeneous if the experimenter selects the input series before beginning the experiment and does not change it during the course of the experiment. Author

Studies on the reversibility of the dorsiventrality (leaves) induced by extrinsic factors are discussed with consideration of relevant literature. Experiments were mainly concerned with the liverworts *Marchantia polymorpha* and *Lunularia*. Gaining insight into the behavior of the *Marchantia* brood body seedlings is reported and especially the question of when and how photoinduction and geoinductions of seedling dorsiventrality are irreversibly stabilized. The author proceeds from the assumption (as opposed to the work of Mirbel, Pfeffer, and Dachnowski) that unilateral dorsiventrality induced in brood bodies by extrinsic factors is completely reversible that however they are entirely independent of the visible germination of the brood bodies and of the morphological development of dorsiventrality in the seedlings. It becomes stable under certain physiologically comprehensible conditions. Author

**INDUCTION AND REJOINING OF BREAKS IN THE DEOXYRIBONUCLEIC ACID OF HUMAN CELLS IRRADIATED AT VARIOUS PHASES OF THE CELL CYCLE**

P H M Lohman Aug 1968 22 p refs

(MBL-1968-15) Avail CFSTI

The induction and rejoining of single strand breaks in the DNA of asynchronous and synchronized cultures of human kidney cells (T-cells) were investigated. The assessment of breaks was carried out with a modified alkaline sucrose gradient technique. The cells were lysed on top of the gradient in the presence of tri-isopropyl-naphthalene sulphonic acid (TIPNS) and 4-amino salicylic acid (PAS). The sedimentation pattern of DNA was studied after X-irradiation with doses up to 40 krad. Breaks could be detected by irradiating cells with doses higher than 5 krad. With synchronous cell populations the smallest induction of breaks was found in the DNA of cells progress from late S to early G2. More breaks were induced in early S and G1. The rejoining of breaks in the DNA was studied during incubation of the cells at 37°C after X-ray exposures to 5 and 20 krad. The capacity of rejoining breaks seems to fluctuate slightly in the different phases of the cell cycle being most effective in early S and minimal in G2 phase. Author

### APPLICABILITY OF FOURIER TRANSFORMATION UPON CONTRAST SENSITIVITY FUNCTIONS

A van Meeteren and J J Vos [1968] 28 p refs  
(IZF-1968-20) Avail CFSTI

Contrast sensitivity functions of the eye are converted by Fourier transformation into psychophysical line-spread functions. The Fourier transforms were computed with a digital computer (PDP7) for retinal illuminations of 0.01 to 1000 troland. The linearity of the spatial filtering by the eye and the interpretation of the Fourier transforms as weighting functions of the spatial organization is discussed. Normalized to unity in their centers the weighting functions are stripped of the sensitivity aspect and represent spatial organization only. Simultaneously the normalization factor can be interpreted as an elementary sensitivity. These normalization factors in fact are nothing but the area under the corresponding contrast sensitivity functions. They prove to be proportional to the square root of the retinal illumination below 1 troland, leveling off at 100 troland. This result can be interpreted as a generalization of the De Vries-Rose law, respectively of Weber's law. The weighting functions demonstrate lateral inhibition.

### STRUCTURE OF THE REPLICATIVE FORM OF BACTERIOPHAGE PH1 CH1 174.7 THE RENATURATION OF DENATURED DOUBLE STRANDED PH1 CH1 DNA

P H Pouwels, J van Rotterdam, and J A Cohen [1968] 28 p refs

(TDCK-S2607-III, MBL-1968-11) Avail CFSTI

Denatured double stranded  $\Phi$ X DNA is formed after exposure of a closed circular duplex to an alkali and reneutralization of the alkali. Under conditions which are optimal for the renaturation of linear phage DNA, denatured double stranded  $\Phi$ X DNA cannot be renatured. Renaturation will proceed very rapidly, however, in alkaline solution at 50°C. Breakage of a phosphodiester bond in denatured double stranded  $\Phi$ X DNA will lead to: (a) native double stranded DNA formed in buffers of low ionic strength at 0°-30°C; (b) single stranded DNA formed in buffers of low ionic strength at temperatures exceeding 30°C; (c) a heterogeneous product

presumably consisting of partially renatured DNA formed in buffers of high ionic strength. These results suggest that the nature of the product of denatured double stranded  $\Phi$ X DNA, in which a phosphodiester bond is broken, is primarily determined by environmental conditions such as temperature and ionic strength.

Investigations of the effects of daily freeze-thaw cycles and ultraviolet irradiation on the survival of bacteria airborne in dust clouds of soil are presented. Representative types of bacteria present in spacecraft assembly areas or normally indigenous to humans were used: *Bacillus cereus*, *B. subtilis*, *Escherichia coli*, and *Staphylococcus aureus*. These organisms were inoculated into a limonite coated soil (collected in the Sonoran Desert, Arizona) and were irradiated daily with a Mars daily total equivalent ultraviolet flux over the 2400 to 2800 Å region, a value of  $298 \mu\text{Wcm}^{-2}$ . Concurrently the organisms were also exposed to a daily freeze-thaw cycle of 16-hr at -65°C and 8-hr at 30°C. The data indicates that the ultraviolet flux at the surface of Mars may not be as effective a sterilizing agent as previously assumed.

### **INTERDEPENDENCY OF SUCCESSIVE RESPONSES IN A PSYCHOPHYSICAL EXPERIMENT**

W A Wagenaar [1968] 19 p refs  
(IZF-1968-21 TDCK15240-III) Avail CFSTI

Serial non-randomness in a sequence of responses in a psychophysical experiment is measured in such a way that three single factors causing non-randomness could be identified. These factors were sequential response bias generally favoring repetition of previous responses, constant response bias in favor of one of the two response alternatives, and fluctuations of the threshold inducing clustering of correct responses. It is argued that the accuracy of a threshold measurement is less than generally assumed as the mentioned factors increase the variance of experimental results to an unknown extent. The use of parametric methods for testing the significance of differences should be avoided therefore. Author

### **SIMULATION OF PACKAGE TRANSFER CONCEPTS FOR SATURN 1 ORBITAL WORKSHOP**

Charles B Nelson Washington Mar 1969 15 p

(NASA-TN-D-5111) Avail CFSTI CSCL 06B

Investigated was the problem of manual transferring massive packages in a zero-g environment from the Saturn docking adapter into the crew quarter areas of the Saturn stage. Only a single handrail was to be used to assist the astronaut during package manipulation. Preliminary transfer simulation studies with a six degree of freedom simulator established the efficiency of the pole and the basic man/package transfer technique. Analysis and correlation of data from the simulations indicated that a combination of package parameter size and mass (moment of inertia) effected package maneuverability, a package with a moment of inertia  $3 \frac{1}{2}$  to  $4.0 \text{ N-m-sec}^2$  ( $300$  to  $350 \text{ in-lbf-sec}^2$ ) appeared to be the upper limit for one man to transfer within a reasonable time frame. **THE EFFECT OF HIGH CONCENTRATIONS OF CARBON DIOXIDE ON BLOOD SEROTONIN LEVELS IN MAN CHRONIC HYPERCAPNIA**

Edward D Gordon Jr Sep 1968 14 p refs

(AD-681501 SAM-TR-68-107) Avail CFSTI CSCL 6/19

Whole blood serotonin levels in young men were investigated during exposure to a 4% carbon dioxide environment ( $\text{PICO}_2 = 29.9 \text{ mm Hg}$ ) for a 10-day period. No significant change in serotonin levels was found in those men acting as outside controls at ambient (0.03%) carbon dioxide, but there was a 34.0% decrease ( $P < 0.1$ ) of serotonin levels in men exposed to 4% carbon dioxide. Exposure to 4% carbon dioxide produced throbbing headaches (day 1-2) and nausea (day 4-6). Serotonin levels after an initial depression tended to return to control levels during the 4% carbon dioxide exposure period. Observed correlation between carbon dioxide and serotonin suggests that the role of carbon dioxide in control of cerebral circulation may be mediated through serotonin. Author (TAB)

**DOSE RATE EFFECT OF LD50/30 IN MICE EXPOSED TO COBALT-60 GAMMA IRRADIATION**

Joseph E Traynor and Edwin T Still Oct 1968 12 p refs

(AD-682288 SAM-TR-68-97) Avail CFSTI CSCL 6/18

LD50/30 determinations were made on Swiss Webster female mice exposed to cobalt-60 gamma irradiation at five dose rates between 2.25 and 200 rads per minute. The results are analyzed by the Bateman formula, which makes a very accurate estimation of the LD50/30 in mice in the dose rate range studied. Preliminary data are presented which indicate that this formula will apply to dose rates as low as 100 rads per day. Author (TAB)

Macaca mulatta primates were standardized and then subjected to stress in the form of prolonged breathing of an air atmosphere saturated with ethanol vapor. Significant changes ( $P < 0.1$ ) were noted in their urine volumes and the excretion of electrolytes and 17-hydroxycorticoids. The primates were then irradiated with a lethal dose (1 100 R) of gamma radiation. Their survival times were recorded and tested for correlation with body weights, urine volumes, excretion of electrolytes and corticoids, and post-stress blood alcohol levels. The changes in the Na/K urinary ratio were found to be significantly ( $P < 0.1$ ) related to the respective postirradiation survival times, but no significant correlation between survival time and the other measurements was detected. The major emphasis of this report is related to problems associated to theory and mechanism of blood clotting. The first study relates to the thermodynamics of protein adsorption onto surfaces. This study provides a uniform theory of the interaction between proteins and surfaces which takes into account both surface energy and surface charge among other factors. Further studies were undertaken of the mathematical treatment of the cascade theory of blood coagulation, taking into account the regulation provided by negative feedback mechanisms. This work provides an important extension of our earlier studies. Other studies related to bio-electrodes with reference to their applications in energy conversion in physiological environment and as sensing devices. Author (TAB)

Soviet scientists believe that the process of photosynthesis in the live leaf begins with a stage of water electrolysis in the chloroplasts, where electrolytic cells are formed by alternating films of chlorophyll and carotene. The potentials of these two pigments are + 0.15 and - 0.15 v respectively under laboratory conditions. Experimental studies were conducted for the purpose of modeling the electrolysis of water in cells formed by platinum electrodes coated with the above pigments. Author

Avail CFSTI CSCL 06F

A method is described which makes it possible to grasp experimentally the question as to which factors of the extrinsic environment bring about dorsiventral structure of the Thalli germinating from morphologically isolateral brood bodies. In addition to unilaterally incident light, which up to now was considered to be the only inductor of dorsiventrality, two other factors must be considered as inductors of dorsiventrality in the germinating brood bodies of Marchantia and Lunularia: the force of gravity and the substratum. It is shown that the morphological outcome of the seedlings depends on the intensities of these three factors: light, gravitational force, and the substratum. It is also shown that if these factors are permitted to act on each other, and/or if they exert a multilateral effect on the brood bodies, then Thalli are obtained which indicate a more or less isolateral formation or even a rare isolateral formation. (AD-681674, FTD-MT-24-17-68) Avail CFSTI CSCL6/4

A method for machine recognition of external stimulæ  
based on so-called potential functions is proposed in the paper  
dealing with artificial intelligence Individuals can recognize events  
and patterns, and teach others to do so frequently without being  
able to explain how the process of recognition comes about For  
instance an illiterate person can be shown letters a and b and  
taught to recognize these letters irrespective of their shape This  
process of information transfer is therefore based not on explanation  
but on demonstration This technique can be applied to learning  
pattern-recognition machines, designed to respond to audio or  
visual commands The problem of teaching the automaton to classify  
correctly a given input can be defined either in the deterministic  
or in the probabilistic domain The report describes the application  
of potential functions to the probabilistic domain and in conjunction  
postulates a third theorem It is concluded that it is in principle

possible to apply the demonstration technique to training of automata and that a rigorously scientific, rather than an empirical approach to the solution of this problem is possible

**THE CONTEMPORARY STATE OF THE PATTERN RECOGNITION PROBLEM**

V A Kovalevskii Mar 1968 24 p refs Transl into ENGLISH from Kibern Dok Akad Nauk SSSR (Moscow) no 5 1967 p 78-86

(AD-681809 FTD-HT-23-155-68) Avail CFSTI CSCL 6/4

This article surveys 32 citations (23 Soviet) covering the period up to 1967. Despite the fact that works devoted to the pattern recognition problem have been published for at least 12 years and in increasing number as a scientific discipline this problem still can not be considered clearly outlined. Different authors examine different statements of recognition problems; the overwhelming majority generally proceed without a statement and thus, work on the solution of a problem that can not be formulated. The absence of a sufficiently general statement of the pattern recognition problem impedes the comparison of patterns because of the difficulty of systematizing numerous and very diverse works. Therefore a statement of the problem that is proposed, evidently embraces the majority of individual problems of recognition and allows us to examine them from a certain single point of view.

**PERFORMANCE AND CAVITATION DAMAGE OF AN AXIAL-FLOW PUMP IN 1500° F (1089 K) LIQUID SODIUM**

Dean C Reemsnyder Walter S Cunnann and Carl Weigel Washington Apr 1969 25 p refs

(NASA-TN-D-5138) Avail CFSTI CSCL 13L

A low headrise axial flow pump was operated in liquid sodium at temperatures to 1500° F for 558 hr to investigate pump performance and blade cavitation damage in alkali metals. The research rotor had nine insertable blades of three different materials, a blade tip diffusion factor of 0.40 and a hub tip radius ratio of 0.77. Overall performance was obtained and a 200 hr cavitation endurance test was conducted in 1500° F sodium at 3450 rpm. Post-test blade inspection indicated that there was slight cavitation damage and that the Ni-Cr-base superalloy (René 41) was more cavitation damage resistant to high temperature sodium than either 316 or 318 stainless steel.

**SOME PHYSIOLOGICAL PARAMETERS FOR PROSODIC DESCRIPTION**

David J Broad Oct 1968 221 p refs

(Contract N00014-67-C-0118)

(AD-682242 SCRL-Monograph-3) Avail CFSTI CSCL 6/16

The objective of the study is to investigate the physiological parameters of voice production in regard to the problem of the description of the prosodic aspect of spoken language. The parameters considered include the length, thickness and medial compression of the true vocal folds; the tension of the vocalis muscle; the resistance of the glottis to the flow of air; the subglottic pressure; the volume velocity of glottal airflow; and the motions of the laryngeal cartilages. In a study of the mechanics of the laryngeal cartilage system, the degrees of freedom of the cartilage motions are isolated and employed to describe the motions mathematically. It is shown how four quantities which are measurable in a laryngoscopic view depend on the degrees of freedom. The

resulting equations are solved to show that it should be possible to evaluate the degrees of freedom from the laryngoscopically measurable dimensions. The relations between the degrees of freedom and changes in the lengths of the intrinsic laryngeal muscles are outlined. An experimental study was conducted to investigate the behavior of some of the physiological parameters of voice production during prosodic variations in the voice.

C U Hoffman and F J Clark Dec 1968 166 p refs

(Contract N00014-67-A-0226)

(AD-682239 TR-EE68-38) Avail CFSTI CSCL 6/16

Specific impedance at various depths in the cerebral cortex was measured at 1.6 kHz using a novel thin film coaxial microelectrode technique which permitted measurement of the impedance of very small volumes of tissue (0.01 cubic mm). Experiments using rats indicated that spreading depression produces increases in specific impedance 3 - 4 times the resting level; increases which are more than 10 times greater than changes previously reported. The impedance locus in the complex plane was loop shaped, very similar to the cross-section of an airfoil. Significant changes in specific impedance were also produced by asphyxia and by releasing cerebrospinal fluid pressure.

(Contract F61052-67-C-0090)  
(AD-681834) Avail CFSTI CSCL 6/16

Under the contract there has been made an extensive study on the normal and pathologically altered inner ear of animals and man. The normal inner ear has been studied by light electron and scanning electron microscopy and new techniques have been developed for these studies. The same techniques have also been used for the pathological ears. Damage to the inner ear has been produced by noise and ototoxic agents. In man autopsy material has been used but a special technique has been developed to get optimal fixation. Author (TAB)

## N69-21896# Danish Academy of Technical Sciences Copenhagen HORIZONTAL JET DILUTION STUDIES BY USE OF RADIOACTIVE ISOTOPES

Jens Hansen and Hans Schroeder 1968 27 p refs *Its Acta Polytech Scand Civil Eng and Bldg Construct Ser No 49*  
(PB-180787 APS-CI-49) Avail CFSTI

Sewage discharge into receiving water often involves use of hydraulic jets in order to obtain an effective mixture of effluent and ambient water. The background for the present study is that existing theories on jet dilution processes have only poor experimental support and that already presented experimental results are not in satisfactory agreement. The radioisotope tracer technique is found convenient for laboratory purposes since dilution measurements are easily and accurately carried out by use of either sampling technique or in-situ measurements. Improvements in initial jet dilution may be obtained by using special disturbance arrangements placed in front of the jet orifice. Author (USGRDR)

## N69-21901# School of Aerospace Medicine Brooks AFB Tex EFFECTS OF PROLONGED REDUCED PRESSURE ON THE GROWTH AND NITROGEN CONTENT OF TURNIPS (BRASSICA RAPAL)

R L Mansell G W Rose B Richardson and R L Miller Sep 1968 20 p refs  
(AD-681499, SAM-TR-68-100) Avail CFSTI CSCL 6/3

Photosynthetic plants are being considered for possible use in atmosphere regeneration and for food supply in extended manned space missions. The effects of potential spacecraft atmospheres on the growth of such plants is important in planning their use. This study investigates the effects of reduced total pressure on one plant, the turnip (*Brassica rapa L.*). During 21-day exposures to total pressures of 380 and 700 mm Hg seedlings and mature turnip plants were periodically harvested and analyzed. The rate of seedling growth, as measured by dry weight increase, was found to be slightly but significantly greater at 380 than at 700 mm. Pressure had no effect on either growth rate or top/root ratio of the older plants. The fact that percent dry weight (ratio of dry weight to fresh weight) was significantly less at 380 mm suggested an effect of pressure on transpiration pattern. Percent total and protein nitrogen decreased with age at both pressures. In roots the rate of decrease was unaffected by pressure but in plant tops the rate of decrease was significantly greater at 380 mm. This variance indicates a moderate but fundamental effect of pressure on plant metabolism and composition. It was concluded that the effects of reduced pressure were not sufficient to limit the future potential of plants in aerospace applications. Author (TAB)

## N69-21904# School of Aerospace Medicine, Brooks AFB Tex SIMULTANEOUS MEASUREMENT OF BLOOD PARAMETERS USING RADIOCHROMIUM-LABELED RED CELLS AND RADIOIRON LABELED PLASMA

Donald F Logsdon, Jr James F Green Guy M Strong, and John W Harper Oct 1968 12 p refs  
(AD-682287 SAM-TR-68-113) Avail CFSTI CSCL 6/1

Separate procedures for the measurement of erythrokinetics, ferrokinetics and blood volume have previously been reported. The technic described in this paper measures these parameters simultaneously thereby reducing the volume of blood and number of samples needed to be drawn and decreasing the possibility of artifactual variations in parameters. Values obtained by this technic are in good agreement with those resulting from the separate studies. Author (TAB)

Appl-SN-422864) Avail US Patent Office

An electrode is described for detecting potential differences generated by parts of the human body. It consists of an electrochemically reversible silver chloride anodized silver disk which contacts the skin through an electrode paste on one face of the disk. A lead wire is soldered to the opposite face, and this connection is then coated with an epoxy resin to preclude contact of it with the paste. This prevents spurious electrical activity which would spoil the quality of the signal.

Extensions of Cornsweet's (1958, 1966) stabilization technique, based on tracking the edge of a blood vessel in the optic disk, for stabilized-image experiments In the present work, a small spot of blue light is imaged on the fundus, and scanned in a circle around the optic disk at high speed Variations in reflectance along this circular raster are detected by a photomultiplier tube and are digitized for further processing A selected frame of this digital video signal is stored in a magnetic-core array and is correlated with subsequent frames to generate eye-movement information in real time The correlator algorithm distinguishes horizontal, vertical, and torsional motions of the fundus pattern Analog displacement signals fed back to a servomechanism can thus cause the raster to track the fundus pattern, locking to the position of the selected frame Such closed-loop signals can be used simultaneously to move a stimulus pattern in stabilized-image experiments

COMPUTER ANALYSIS TECHNIQUES FOR SPACECRAFT ADSORPTION BEDS

R L Blakely and B N Taylor (McDonnell Douglas Corp , McDonnell Douglas Astronautics Co , Huntington Beach, Calif )  
American Institute of Chemical Engineers, National Meeting, 64th, Symposium on Adsorption - Part III, New Orleans, La , Mar 16-20, 1969, Paper 19 C, 23 p, 6 refs

\$0 50

Discussion of studies concerning the heat and mass transfer characteristics of CO<sub>2</sub> adsorption beds for a spacecraft CO<sub>2</sub> removal system Attention is given to methods and techniques used to prepare a digital computer program for adsorption bed analysis The computed values are compared with experimental data It is found that the equations and techniques used are adequate for determining the transient performance of spacecraft adsorption beds Equilibrium isotherm data may be used to determine the instantaneous surface pressures of the adsorbent material if an idealized particle is subdivided into a number of layers, or it may be used for the entire particle if intraparticle diffusion is negligible A one dimensional model is satisfactory for beds which do not have internal heat exchangers

MANUFACTURING ASPECTS OF TECHNOLOGY FEASIBILITY SPACECRAFT STERILIZATION AND BIOASSAY PROGRAM

John P. McDonald, Ramon McKinney, and David M. Shuford (Martin Marietta Corp , Denver, Colo )

**A69-22540**

IN ADVANCED TECHNIQUES FOR MATERIAL INVESTIGATION AND FABRICATION, SOCIETY OF AEROSPACE MATERIAL AND PROCESS ENGINEERS, NATIONAL SYMPOSIUM AND EXHIBIT, 14TH, COCOA BEACH, FLA., NOVEMBER 5-7, 1968, PROCEEDINGS. [A69-22301 09-15]

North Hollywood, Calif., Western Periodicals Co (Science of Advanced Materials and Process Engineering Proceedings, Volume 14), 1968, II-3B-5 (19 p.)

Description of a bioassay program which was performed during the assembly of the Technology Feasibility Spacecraft (TFS). The problems involved in determining the biological burden on a full-scale spacecraft were identified under operational conditions. The effectiveness of the sampling techniques were studied, including their compatibility with assembly activity and personnel. Standard cleaning techniques employed during assembly were found to be effective in decontamination. Handling during assembly operations was found to contribute far more contaminants than fallout. Coupon sampling, as applied during this assembly effort, was the least satisfactory sampling technique used. Normal handling of coupons did not occur, and the frequency of ruined samples was high. The bioburden was determined to be approximately  $1 \times 10^7$  microorganisms. Accumulative counts were not obtained because of the schedule disruption produced by assembly activities. Other problems encountered are discussed, and solutions are proposed. Motivation of assembly personnel, highly detailed assembly planning, and the use of standard cleaning procedures are recommended to decrease biological contamination on the spacecraft. (Author)

CHANGES IN ACID-BASE BALANCE INDUCED BY 100 PERCENT GRADIENT HEADWARD ACCELERATION

Spencer Shropshire, Jr., Anthony R. Dowell, Michael McCally, Shirley A. Pohl, and George L. Bowles (USAF, Systems Command, Aerospace Medical Div., Aerospace Medical Research Laboratories, Wright-Patterson AFB, Ohio)

Aerospace Medicine, vol 40, Mar 1969, p 237-242 27 refs

The effects of high gradient acceleration upon acid-base balance were evaluated in six baboons and nine human volunteers. After a 1-hr ride on a short-radius centrifuge, humans showed a mean increase of  $1.0$  nmole/liter of arterial  $[H^+]$ , ( $p < 0.01$ ), and the baboons' arterial  $[H^+]$  rose  $12.0$  nmole/liter ( $p < 0.01$ ). Serum potassium rose in each group, while bicarbonate ion fell. Centrifugation caused excess lactate production in the baboons ( $1.75$  nmole/liter). The changes in hydrogen ion were felt to result from proton donors produced from anaerobic metabolism. The magnitude of acceleration used is easily tolerable and comparable to that which has been proposed as a countermeasure to weightlessness during prolonged space flight. (Author)

APPLYING THE PRINCIPLES OF PHYSIOLOGICAL MODELING IN SPACE BIOLOGY AND MEDICINE

V. V. Parin and E. B. Shulzhenko (Ministerstvo Zdravookhraneniya SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR)

Aerospace Medicine, vol 40, Mar 1969, p 242-244 8 refs

Discussion of an evolutionary approach to the problems of space physiology through the development of comparative research methods. The means by which mathematical, physical, and physiological modeling can be combined for the analysis of functional changes during varying gravity conditions are elaborated. The method is applied to a study of the effects of transverse accelerations on cardiovascular changes and their relation to hemodynamic shifts of pulmonary circulation. The results obtained under centrifuge and modeling conditions were similar. It is concluded that a study of the evolution of a given function makes it possible to establish the development of structural and functional shifts in the circulation apparatus, their sequence, and the process by which regulatory mechanisms are reconstructed, as well as to reveal their dependence on new gravity conditions. PRELIMINARY CLINICAL REPORT OF THE MEDICAL ASPECTS OF APOLLOS VII AND VIII

Charles A. Berry (NASA, Manned Spacecraft Center, Houston, Tex.)

Aerospace Medicine, vol 40, Mar 1969, p 245-254

Preliminary clinical report of the significant medical data gathered on the missions of Apollo 7 and 8. Preventive medical activities in the preflight period and inflight treatment procedures are discussed. Cardiovascular findings and hematological and biochemical analyses conducted during both pre- and postflight examinations are reported. It is concluded that the Apollo spacecraft is capable of supporting man adequately in the space environment from a physiological point of view, and that radiation levels have not been proven to be significant in the flights thus far. (Author)

EFFECT OF COOL-DEHUMIDIFIED INSPIRED AIR ON THE

PHYSIOLOGIC RESPONSES TO A HOT, HUMID ENVIRONMENT

Ralph Gaudio, Jr. (USAF, Systems Command, Aerospace Medical Div., Aerospace Medical Research Laboratories, Wright-Patterson AFB, Ohio)

Aerospace Medicine, vol 40, Mar 1969, p 254-257 16 refs

Study of the physiological effects of breathing cool dehumidified air in a hot-humid environment which have operational significance to aircrews, where both the specific physiological responses and tolerance limits are known. The mean values for tolerance time, heart rate, temperature changes, and sweat loss are tabulated. It is concluded that while there was a lack of objective improvement in the physiological parameters, the subjects reported a reduction in feelings of anxiety with the addition of cool-air breathing. However, cool-air breathing cannot be considered a versatile and generally applicable thermal protective device. (Author)

STUDIES OF AMPLITUDE VARIATION IN THE ULTRA-LOW FREQUENCY BALLISTOCARDIOGRAM WITH SPECIAL REFERENCE TO CARDIOVASCULAR REACTIVITY

J. Eldred Smith (United Air Lines, Inc., Medical Dept., Washington, D. C.)

Aerospace Medicine, vol 40, Mar 1969, p 258-263. 5 refs

Discussion of the amplitude variations in ultralow-frequency ballistocardiograms of young, normal airline stewardesses and applicants in relation to cardiovascular reactivity. Results showed the same variation as in a similar group of young males. It is concluded that the amplitude variations were due to factors of emotional and cardiovascular reactivity, and were more pronounced in the pre-employment group. The HK/HL ratio on the acceleration curve showed no alteration with reactivity, and may thus be a stable measurement of abnormality in an older age group. The effect of Propranolol on cardiovascular reactivity is discussed as an important diagnostic adjunct. It is concluded that situational stresses associated with the increase in blood flow rates have a characteristic clinical picture in young adults. (Author)

EFFECTS OF MMH UPON THE CORNEA AND STUDIES ON THE BLOOD-AQUEOUS BARRIER TO MMH  
Gordon H. Takahashi and Charles E. Dasher (USAF, Systems Command, Aerospace Medical Div., School of Aerospace Medicine, Brooks AFB, Tex.)

Aerospace Medicine, vol. 40, Mar 1969, p 279-283 13 refs  
Examination of the effect of the monomethylhydrazine (MMH) on the cornea. Results show that once MMH enters the in vivo arterial system it easily passes through the blood-aqueous barrier to enter the aqueous humor bathing the endothelial layer of the cornea. It was observed grossly that the dog corneas became edematous within 5 to 6 hr after MMH entered the anterior chamber. Using an in vitro clamped rabbit cornea, marked corneal swelling occurred within 15 to 20 min after exposure to MMH at concentrations of  $(10^{-2}$  to  $10^{-4}$  moles per liter). Exposure to lower concentrations of MMH ( $10^{-5}$  to  $10^{-7}$  moles per liter) resulted in a greater lag time (20 to 60 sec), but once the swelling began the rates of change were nearly identical over the period of observation. The rate of corneal swelling is reduced if L-arginine is added to the MMH containing medium. Removal of the MMH containing medium will also reduce the rate of swelling if accomplished soon enough. THERMAL REGULATION IN X-IRRADIATED DOGS SUBJECTED TO HEAT STRESS  
R. A. E. Thomson, S. M. Michaelson, and W. J. Quinlan, Jr. (Rochester University, School of Medicine and Dentistry, Dept. of Radiobiology and Biophysics, Rochester, N. Y.)  
Aerospace Medicine, vol. 40, Mar 1969, p 283-286 8 refs  
AEC-supported research

Study of two groups of X-ray irradiated dogs subjected to heat stresses approximately seven years and one to two years after the irradiation. The study was conducted to determine the thermoregulatory ability of the irradiated animals. Nonirradiated dogs served as controls. Differing thermoregulatory responses of the two groups are compared, and it is concluded that latent injury in the irradiated dogs is suggested by the differing patterns. B H

REGENERABLE CARBON DIOXIDE SORBENTS  
F. Tepper, R. Udavcak, F. Vancheri, and K. Ball (Mine Safety Appliances Research Corp., Evans City, Pa.)  
Aerospace Medicine, vol. 40, Mar 1969, p 297-300  
Contract No. NAS 1-5277

An experimental program is underway to evaluate regenerable sorbents for CO<sub>2</sub> removal in space-cabin environments. Isotherms were generated for a number of different activated carbons at CO<sub>2</sub> partial pressures equivalent to those likely to be encountered in a space-cabin environment. Activated carbon, with a low CO<sub>2</sub> capacity, would not be a likely sorbent candidate. Some experimental work was done with coprecipitated gels as CO<sub>2</sub> sorbents, but the results were inconclusive. Ion exchange resins were found to be effective in removing CO<sub>2</sub> from humid air, and were comparable to molecular sieves operated in dry air. Weak base secondary amine resins could be thermally/vacuum regenerated at reasonably low temperatures, while strong base resins of the quaternary ammonium type were not thermally regenerable. After thermal regeneration of the weak base ion exchange resins, it was found to be necessary to reactivate them with water. (Author)

EPIDEMIOLOGY OF AERIAL APPLICATION ACCIDENTS  
G. Anthony Ryan and John D. Dougherty (Harvard University, Harvard School of Public Health, Daniel and Florence Guggenheim Center for Aerospace Health and Safety, Boston, Mass.)  
Aerospace Medicine, vol. 40, Mar 1969, p 304-309 11 refs  
Analysis of 383 aircraft accidents involving aerial application operations or "crop-dusting". The aircraft were grouped into five classes: high- and low-wing monoplanes, biplanes, helicopters, and a small miscellaneous group. The accidents of each group were examined with respect to type of accident, phase of operations, amount of damage to the aircraft, and degree of injury to the crew. The age and experience of the pilots were also examined. It was found that there were marked differences between classes of aircraft in the incidence of death and injury; helicopters had a much lower rate than fixed-wing aircraft. The proportion of deaths occurring in accidents to high-wing monoplanes was four times as great as in low-wing monoplanes, biplanes, or helicopters. Differences between classes were also found in the types of accidents occurring, the phase of operations in which they occurred, and the causes of accidents. The distributions of the age and experience of the pilots in each class were not found to be greatly different. (Author)

**A NEW VIEW OF THE "SYNTHESIS OF LIFE"**

Sidney W. Fox (Miami, University, Institute of Molecular Evolution, Coral Gables, Fla.)  
(Florida Academy of Sciences, Annual Meeting, 32nd, Stetson University, DeLand, Fla., Mar. 21-23, 1968)  
Florida Academy of Sciences, Quarterly Journal, vol. 31, Mar 1968, p 1-16. 21 refs  
Grant No. NGR-10-007-008

Discussion of experimental research concerned with the scientific question of the origin of life Major attention has been devoted to the synthesis of precursor polymers and their self-assembly into protocells The primitive cell which could arise from reactant gases in less than a few hours had then to evolve to a contemporary cell. It is now possible to visualize how the first enzymes could have arisen in the absence of enzymes to make them. Schmitt (1956) first demonstrated self-assembly of fibrils of the protein collagen. Experiments have shown how a proteinaceous microparticle with internally ordered macromolecules, catalytic activities, and many of the properties of a contemporary cell including the ability to participate in a presumably primitive reproductive process can, and could be, spontaneously produced G R.

#### MICROVILLAR BLEB FORMATION IN PRIMATE HEPATOCYTES IRRADIATED WITH 32-MEV PROTONS

J. J. Ghidoni and H. Thomas (Baylor University, College of Medicine, Dept. of Pathology, Laboratory of Experimental Pathology, Houston, Tex.)  
*Radiation Research*, vol 36, Nov 1968, p 327-332 11 refs  
NIH Grants No. RH-00499, No. CA-08803, Grant No. NGR-44-003-018

Eight rhesus monkeys (*Macaca mulatta*) were whole-body irradiated with 6000 rads of 32-MeV protons. Animals were killed at several time intervals after exposure. Tissue blocks were fixed in glutaraldehyde, postosmicated, and then embedded in Maraglas-D E R 732 resin. Observation of ultrathin sections by electron microscopy revealed balloon-like enlargements of distal portions of hepatocytic microvilli (blebs) which were less dense than the proximal portion of microvilli. The blebs ranged widely in size, some were contained within the space of Disse, whereas many protruded into the sinusoidal lumen. In a few micrographs the sinusoidal lumen was filled with bleb-like structures. Such bleb formation suggests a possible mechanistic explanation for hepatic congestion following high levels of irradiation.

G. L. Rapatz (American Foundation for Biological Research, Madison, Wis.)

IN DEPRESSED METABOLISM, PROCEEDINGS OF THE FIRST INTERNATIONAL CONFERENCE, WASHINGTON, D C, AUGUST 22, 23, 1968 [A69-23116 10-04]

Conference sponsored by the 24th International Congress of Physiologic Sciences, NASA, the University of Missouri, and the American Institute of Biological Sciences.

Edited by X. J. Musacchia and J. F. Saunders  
New York, American Elsevier Publishing Co., Inc., 1969, p 3-32, Discussion, p 33-38 39 refs

Investigation of structural and functional changes in cells as a result of the freezing of muscular tissue, or the suspension of erythrocytes. The changes are shown to be dependent on the cooling rate and the final exposure temperature. Slow freezing to temperatures of -2 or -3°C results in severe shrinkage and distortion of cells, but they recover their structural and functional integrity after thawing. In slow cooling to lower freezing temperatures, the erythrocytes hemolyze and the muscle fibers undergo irreversible shortening, accompanied by a structural disintegration of the components of the fiber. Very rapid cooling to low temperatures results in the formation of intracellular ice, which is injurious to both the erythrocytes and the muscle. It is suggested that the recovery of organisms whose tissues include blood and muscle is unlikely if frozen at temperatures below -3°C, unless cryoprotective agents are present to prevent freezing damage. B. H.

New York, American Elsevier Publishing Co , Inc , 1969, p 119-157, Discussion, p 157, 158 78 refs

Research supported by the Centre National de la Recherche Scientifique

Comparative analysis of variations in glucose, lactate, free fatty acids, hepatic glycogen, and endocrine activity in a fasting, hibernating dormouse and a rat in deep hypothermia It is shown that the cellular metabolism of different tissues in the organism is affected differentially in hypothermia, and that various physiological functions cease at determined critical body temperatures Enzyme actions, like those of hormones, are shown to be affected unequally by a decrease in temperature, which explains why the hypothermic dormouse can rewarm spontaneously while the rat cannot It is noted that the differential action of temperature on organ activity and on the biochemical activity of the tissues should further an understanding of the metabolic picture found in hypothermic animals, and could lead to some practical applications B H

Systematic investigation of the alterations in biochemical processes induced by hyperthermia, using an isolated rat liver perfused at low temperatures The data reported are primarily on alterations in lipid metabolism, and on lipinogenesis by liver slices and adipose tissue during incubation at low temperatures It is concluded that liver and adipose tissue from the rat, a nonhibernator, cannot synthesize fat from acetate or glucose at a temperature of 7°C In addition, the effects of epinephrine on fat mobilization from adipose tissue are lost between 17 and 7°C It is noted that it would be valuable to compare these findings with those on tissues from a hibernator that can apparently exist on its fat stores at temperatures lower than 7°C B H

Edited by X J Musacchia and J F Saunders  
New York, American Elsevier Publishing Co , Inc , 1969, p 199-226, Discussion, p 226-230 70 refs

Description of experiments to determine whether hibernation is strictly seasonal or inducible at any time, and to examine whether such a state of poikilothermia is specific to hibernators or can be induced in true homeotherms It is noted that in hibernating animals

biosynthesis of thyroglobulin is very low, and that protein synthesis takes place physiologically during the periodic awakenings when body temperature is increased The role of these awakenings, whose importance in the biosynthesis of thyroid hormones is established, is considered of prime importance to the maintenance and evolution of thyroid activity during hibernation B H

PHS Grant No GM-15889-01

Study of metabolic depression in homeotherms under conditions of (1) acclimation to high-temperatures, (2) metabolic adaptation to climates in which heat dissipation is a particular problem, and (3) hibernation or torpor It is not known whether the first state is significant as a means of seasonal adaptation to heat The second state is shown to be widely distributed among various taxonomic groups which have species or populations forced to contend with severe problems of heat dissipation In the absence of detailed information on the physiological changes accompanying entrance into torpor it is suggested that some metabolic suppression may be involved It is noted that the metabolism of torpid animals is apparently depressed with respect to the normothermic state, which is held to be due to the passive cooling brought about as a consequence of a low ambient temperature and the absence of sufficient thermogenic activity to avoid a low body temperature B H

Contract No DA-49-193-MD-2668

Detailed analysis of experiments involving the occurrence of performance failure in hypothermia as a temperature dependent phenomenon. Six species of mammals were tested: the rat, guinea pig, chinchilla, mouse, gerbil, and hamster. The average body temperature for performance suppression was 24.6°C. Repeated hypothermias did not significantly affect this temperature. The performance suppression temperature of the hamster was higher and more variable than was noted in nonhibernating species. It is concluded that while trained performance persists through a large depression in body temperature, it is nevertheless a temperature dependent phenomenon, with suppressions occurring in a nonlinear fashion. Trained performance stopped within narrow body temperature ranges for members of the same species performing the same task, and within a wider, but still narrow range for the six species studied. B H

PHS Grant No HE-11493

Discussion of some aspects of physiological and metabolic effects in humans cooled under elective controlled conditions as a form of therapy. It is noted that functional alterations in humans as compared to animals are not as consistent or as depressed at any given hypothermic level, due in part to the depressant effect of deeper anesthesia in animals. Cooling is characterized by an increase in gradients between the three thermal zones, being inverse in intravascular as compared to surface cooling. Hyperglycemia appeared only in humans cooled below 30°C. Plasma electrolytes were unchanged, except in profound hypothermia (below 20°C). Plasma proteins were unaffected, and in hypothermic patients with metabolic deficits, correction was achieved by conventional requirements. Below 30°C, acidosis developed unless ventilation was supported. The studies indicate 28°C to be a critical physiological level. B H

Edited by X J. Musacchia and J. F. Saunders.

New York, American Elsevier Publishing Co., Inc., 1969, p. 569-604, Discussion, p. 604-607 31 refs

Research supported by the University of Missouri, Grant No. NGR-26-004-021.

Investigation of the radiation response of animals in depressed metabolic states (DMS). The discussion is restricted to two forms of DMS, hibernation and hypothermia, which are characterized by marked reductions in body temperatures along with a reduction of other physiological parameters indicative of metabolic rate. It is shown that hibernating ground squirrels do not respond to irradiation as do active normothermic squirrels. The protective effect exhibited after arousal from hibernation is studied, and it is suggested that radio-resistance in hibernation may be temperature dependent, with the posthibernation state playing a less important role than the actual state of the animal during irradiation. Changes in the influence of catecholamines relevant to hibernation and hypothermia are noted, and it is suggested that their recognition as radio-protective drugs and as physiological modifiers of circulatory functions be considered in the interpretation of current and future results. B H

EFFECT OF GLOVES ON CONTROL OPERATION TIME

James V Bradley (Antioch College, Aerospace Medical Research Laboratories and the Behavior Research Laboratory, Yellow Springs, Ohio).

Human Factors, vol 11, Feb. 1969, p 13-20. 7 refs

Five types of control (push buttons, toggle switches, knobs, horizontally operable levers, and vertically operable levers) were

operated at room temperature with the hand clothed as follows: no glove, wool glove, and double glove (leather glove over wool glove). Operation time was measured. It was concluded that the effect of gloves on control operation time depends on the type of glove worn, the physical characteristics of control, and the type of control operation required. (Author)

**A69-23181 #****GLOVE CHARACTERISTICS INFLUENCING CONTROL MANIPULABILITY**

James V Bradley (Antioch College, Aerospace Medical Research Laboratories and the Behavior Research Laboratory, Yellow Springs, Ohio).

Human Factors, vol. 11, Feb. 1969, p. 21-35.

Both objective measurements and subjective ratings were made of the degree to which each of 18 widely differing gloves possessed each of the following characteristics: tenacity (resistance to sliding over a grasped surface), snugness of fit, suppleness, and protection against injury to the enclosed hand. Twenty-two subjects performed each of five different control operations while wearing each of the 18 gloves and while barehanded. For both objective and subjective measurements of the characteristics, it was found that the degree of tenacity is correlated with speed of gloved operation of on-off controls, that the amount of suppleness is correlated with rapidity of gloved operation of adjustable controls, and that increasing snugness of fit improves operation time for both types of control. The difference between operation times, gloved and barehanded, was found to depend strongly on the type of control operation required. (Author)

**A69-23184****GAS VACUOLE DEVELOPMENT IN A BLUE-GREEN ALGA.**

J. Robert Waaland and Daniel Branton (California, University, Dept. of Botany, Berkeley, Calif.).

Science, vol. 163, Mar. 21, 1969, p. 1339-1341. 16 refs.

NSF Grant No. GB-6263.

De novo production of gas vacuoles can be induced in the blue-green alga *Nostoc muscorum* by transferring the cells from a defined medium to distilled water. The unusual ultrastructure of the gas vacuole membranes permits their easy recognition when specimens are prepared for electron microscopy by freeze-etching. The youngest gas vacuoles are biconical organelles, 48 hr after induction, the gas vacuoles reach their maximum observed length when they are cylinders (1.5 by 0.1  $\mu$ ) with conical ends. Grant No DA-DA-17-68-G-9249

Investigation of the effect of CW and pulsed microwave power (5.5 GHz) on the eyes of rabbits. Lens opacities (when produced) were developed within four days after exposures of sufficient intensity and duration, 3-min at the 1-W level were found to exceed cataractogenic threshold, while at the 1/2-W level no acute effect was observed following a 2-hr exposure. The method consisted of placing the anesthetized animals so that the exposed eye served as the termination of a length of waveguide, permitting conventional microwave instrumentation to be used for measurement of power entering the eye. G R

**A69-23186 \*****EEG ELECTRODE SENSITIVITY - AN APPLICATION OF RECIPROCALITY**

Stanley Rush and Daniel A Driscoll (Vermont, University, Dept of Electrical Engineering, Burlington, Vt )

IEEE Transactions on Bio-Medical Engineering, vol BME-16, Jan 1969, p. 15-22 12 refs

NASA-supported research.

Investigation of the sensitivity of EEG leads to the location and orientation of sources in the brain by means of the reciprocity theorem. Quantitative information used in determining the sensitivity is derived from constant potential plots of a three-concentric-sphere mathematical model of the head with current applied through surface leads (the reciprocal problem), and from an electrolytic tank employing a human skull. Advantages of the reciprocal of lead field approach are outlined, and several conclusions are drawn G R.

**A69-23297 #****CHEMICAL AND BIOLOGICAL PROTECTION OF THE ORGANISM AGAINST HARMFUL EFFECTS OF RADIATION AND VIBRATION [CHEMICZNE I BIOLOGICZNE ZABEZPIECZENIE USTROJU PRZED SZKODLIWYM DZIAŁANIEM PROMIENIOWANIA I WI-BRACJI]**

Tadeusz E. Wróblewski.

Postępy Astronautyki, no. 3, 1968, p 77-85 16 refs In Polish.

Review of the results of studies concerning chemical and biological means of safeguarding an astronaut's body against ionizing radiation and vibration. The prophylactic and therapeutic chemical drugs mitigating the radiation effects are discussed. It is stated that the most efficient are biological drugs, but immunological reaction of the patient seriously limits their use. The effect of vibration on the organism is briefly described, and modern protection means enhancing the body's immunity to vibration are discussed. Z W.

**A69-23298 #****EFFECT OF LOW TEMPERATURE ON THE ORGANISM IN HIGH-ALTITUDE FLIGHTS AND ASTRONAUTICS [WPŁYW NISKIEJ TEMPERATURY NA ORGANIZM W LOTACH WYSOKOŚCIOWYCH I KOSMONAUTYCE].**

Lucjan Golec (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland).

Postępy Astronautyki, no. 3, 1968, p. 87-100. 41 refs. In Polish.

Examination of the factors regulating the temperature of the human body in a low-temperature environment. Special attention is given to the metabolism in a cold environment, lung ventilation, and the onset of shuddering. The results obtained by examination of people acclimatized to the Arctic conditions are discussed. The prospects of using hypothermy in interplanetary flights are examined. Z W.

**A69-23303 \*****ENZYMATIC CONVERSION OF NOREPINEPHRINE TO EPINEPHRINE BY THE BRAIN.**

Michael Zigmond, Harvey Karten, Richard J. Wurtman (Massachusetts Institute of Technology, Dept. of Nutrition and Food Science and Dept. of Psychology, Cambridge, Mass.), and Larissa A. Pohorecky.

Journal of Pharmacology and Experimental Therapeutics, vol. 165, no. 2, 1969, p. 190-195. 27 refs.

NIH Grants No. AM-11237, No. AM-11709, Grant No. NGR-22-009-272.

Demonstration of the epinephrine-forming enzyme phenylethanolamine-N-methyl transferase (PNMT) in various brain regions of the rat, cat, hen, and turtle. The activity of the enzyme is greatest when either norepinephrine or phenylethanolamine is used as its substrate in the olfactory tubercle and olfactory bulb. PNMT activity is elevated in the olfactory tubercle among rats treated with dexamethasone for seven days. After the injection of  $H^3$ -norepinephrine into the lateral cerebral ventricle, a large fraction of the amine is converted to  $H^3$ -epinephrine and stored in the olfactory bulb. F.R.L.

### A69-23304 \*

#### PERIODIC SHOCK WITH ADDED CLOCK.

Derek P. Hendry, Matthew Yarczower, and Richard C. Switalski (Illinois, University, Chicago, Ill., Maryland, University, College Park, Md.).

Journal of the Experimental Analysis of Behavior, vol. 12, Jan. 1969, p. 159-166. 26 refs.

NIH Grants No. MH-08819, No. GM-14221, Grant No. NaG-189-61.

Rats were shocked every 6 min while responding was maintained on a variable-interval schedule of reinforcement. With some rats, shocks were interspersed with a sequence of three different stimulus conditions (S3 - S2 - S1), or clock cues, each lasting 2 min. For other rats, a single stimulus condition prevailed between shocks at the beginning of the experiment, and clock cues were introduced later. Response rate decreased from S3 to S1. Response rate in S3, S2, and S1 was inversely related to shock intensity. When clock cues were added, response rate increased in all 2-min intershock periods. During clock cues, an index of curvature, indicating the degree of negative acceleration of response rate, was greatest for S1 and least for S3, and was directly related to shock intensity. The response-facilitating effect of shock and its relation to a possible discriminative function of shock and to behavioral contrast are discussed.

#### PROTEIN QUALITY OF THE BACTERIUM HYDROGENOMONAS EUTROPHA.

Doris H. Calloway and Adarsh M. Kumar (California, University, Dept. of Nutritional Sciences, Berkeley, Calif.).

Applied Microbiology, vol. 17, Jan. 1969, p. 176-178. 8 refs. Grant No. NGR-05-003-089.

Study of hydrogenomonas eutropha, a hydrogen-fixing bacterium, as a means of providing new food sources more independent of conventional agriculture. H. eutropha cells harvested from semicontinuous autotrophic culture and washed free of substrate contain about 13% nitrogen on a dry-solids basis. The biological value and digestibility of the bacterial nitrogen were determined in the rat by use of an abbreviated Mitchell-Thomas nitrogen balance technique, with casein as the standard protein. Casein nitrogen was 99% digestible, and that of both whole boiled and sonically ruptured bacterial cells was 93%. The biological value of casein and the bacterial preparations was uniformly 77%. The amino acid composition of the bacteria, as in the case of casein, indicates a first limitation of sulfur-containing amino acids. These compositional features suggest that H. eutropha may be potentially valuable as a protein supplement in animal feeds.

#### REGIONAL AND TOTAL BODY SWEAT COMPOSITION OF MEN FED CONTROLLED DIETS.

Francoise Costa, Doris Howes Calloway, and Sheldon Margen (California, University, Dept. of Nutritional Sciences, Berkeley, Calif.).

American Journal of Clinical Nutrition, vol. 22, Jan. 1969, p. 52-58. 13 refs.

PHS Grant No. AM-10202, Contract No. NAS 9-3966.

Comparison of a variety of psychological, physiological, and biochemical responses to two developed diets, both thought to be nutritionally adequate. Sweat was collected from acclimatized young men during work on a cycle ergometer in a temperate environment. The men were divided into two matched groups of six each and fed for six weeks either a diet of the type used for Project Gemini or a purified formula. There was considerable variation in the concentrations of the various constituents between the regional sites and the total body sweat. With the single exception of sodium, arm-bag sweat was the most concentrated; for all constituents measured, total body sweat was the least concentrated. The following factors were related: sweat sodium and chloride were directly related to dietary intake, osmolality of arm-bag sweat varied directly with sodium concentration within and between dietary groups, and nitrogen concentration of total body sweat varied inversely with the volume of sweat lost in the constant 40-min work test. Although the concentrations were dissimilar, sodium contents of arm-bag and

total body sweat were closely related. This was not true of nitrogen and potassium levels. Thus, arm-bag sweat cannot be used to predict body losses of these components. The results suggest that variation among published total body sweat nitrogen data may be rationalized by consideration of sweat rate.

#### DETERMINATION OF HEAT SUSCEPTIBILITY AND HEAT TOLERANCE - A NEW INDEX.

C. A. Verghese (Institute of Aviation Medicine, Dept. of Physics, Bangalore, India), K. C. Sinha (Institute of Aviation Medicine, Dept. of Physiology, Bangalore, India), and Shri C. S. Nair (Defence Institute of Physiology and Allied Sciences, Bangalore, India).

Aero Medical Society of India, Journal, vol. 11, Oct. 1968, p. 5-14. 10 refs.

Experimental investigation of individual heat susceptibility and tolerance in astronauts. The plot of progressive changes in mean skin temperatures and oral temperatures when a subject was exposed to acute thermal stress converged after an initial phase of divergence. The progressive changes in skin and oral temperature,  $T_s$  and  $T_o$ , were found to be given by  $T_s = a + b \log t$  and  $T_o = A + B t$ , where  $a$ ,  $b$ ,  $A$ , and  $B$  are constants and  $t$  is the time. Convergence points can be obtained from these equations. The predicted time for this convergence can be used as an index of susceptibility and tolerance. There is very good correlation between the new index and tolerance time as measured by the subjective feeling of intolerance and the onset of symptoms of heat collapse. It is suggested that acute thermal stress be defined as a state where the mean skin temperature increases to a level above the oral temperature.

#### A NOMOGRAM FOR AIRCRAFT RUDDER PEDAL DESIGN.

S. P. Verma (Institute of Aviation Medicine, Dept. of Human Engineering, Bangalore, India) and C. A. Verghese (Institute of Aviation Medicine, Dept. of Physics, Bangalore, India).

Aero Medical Society of India, Journal, vol. 11, Oct. 1968, p. 15-21.

Description of a nomogram for designing aircraft rudder pedals. The nomogram consists of four parts and takes into consideration the following principal dimensions: seat reference point, buttock-knee length, foreleg length, rudder reference point, seat pan angle to the horizontal, thigh angle to horizontal, angle between the thigh and foreleg, and the angle made by the seat reference line with the horizontal.

#### EVALUATION OF CASES OF HEAD INJURIES IN AIRCREW.

H. Lakshminarayan (Institute of Aviation Medicine, Dept. of Psychiatry, Bangalore, India).

Aero Medical Society of India, Journal, vol. 11, Oct. 1968, p. 22-29. 5 refs.

Summary of analyzed data on head injuries in the Indian Air Force collected over a period of six years. The statistics show that young aircrew officers in the age group from 20 to 25 yr and with service experience of about 3 to 5 yr are the principal victims of head injuries in the Indian Air Force. The principal cause of these head injuries is found to be accidents on motor scooters or motor cycles.

#### BLOOD PRESSURE FLUCTUATION IN A CASE OF MULTIPLE EXTRA-SYSTOLES AS OBSERVED IN TILT TABLE STUDIES (A CASE REPORT).

K. C. Sinha (Institute of Aviation Medicine, Dept. of Physiology, Bangalore, India), C. A. Verghese (Institute of Aviation Medicine, Dept. of Physics, Bangalore, India), and Shri C. S. Nair (Defence Institute of Physiology and Allied Sciences, Bangalore, India).

Aero Medical Society of India, Journal, vol. 11, Oct. 1968, p. 30-36.

Discussion of the results of an assessment of the flying fitness of a pilot afflicted with multifocal extra systoles. The findings are as follows: (1) the extra systoles appeared as a result of induction due to postural changes, (2) the frequency of extra systoles increased with an increase in the degree of tilt, (3) the extra systoles appeared in quick succession immediately after a vertical 90° tilt; and (4) there were stages when a significant drop in systolic pressure was noted, particularly after the appearance of extra systoles in quick succession.

OCULAR INJURIES SUSTAINED DURING BAILOUT FROM A VAMPIRE AIRCRAFT (A CASE REPORT).

J. N. Singha (Institute of Aviation Medicine, Dept. of Ophthalmology, Bangalore, India).

Aero Medical Society of India, Journal, vol. 11, Oct. 1968, p. 37-47. 20 refs.

Description of two bailout cases resulting in subconjunctival hemorrhages. In the first case, ocular hemorrhages resulted from exposure to negative g effect during an inverted spin. Unilateral retinal changes with diminished intraocular pressure on the right side were probably due to the sudden degree of uneven tightening of the shoulder straps and compression of neck vessels by the shoulder harness on the same side, thereby causing sudden and severe changes in retinal circulation. In the second case, petechial hemorrhages over face skin and subconjunctival hemorrhages in both eyes were attributed to wind blast mainly by virtue of its direct effects rather than from "squeeze force." A thorough eye examination after bailout accidents is recommended.

SPATIAL DISORIENTATION IN A JET FIGHTER PILOT (A CASE REPORT).

V. S. N. Murty.

Aero Medical Society of India, Journal, vol. 11, Oct. 1968, p. 56-62. 5 refs.

Discussion of the case of an air force pilot who suffered from episodes of disorientation while flying as well as on the ground. The diagnostic difficulties encountered in this case are described. The most probable diagnosis was considered to be vestibular neuritis with permanently decreased caloric response. It is pointed out that, if the pilot had met with a fatal accident, it could easily have been attributed to spatial disorientation, but not of pathological origin.

AN AXIOMATIC EXPLANATION OF COMPLETE SELF-REPRODUCTION.

Lars Löfgren (Illinois, University, Urbana, Ill.).

Bulletin of Mathematical Biophysics, vol. 30, Sept. 1968, p. 415-425. 14 refs.

Grants No. AF AFOSR 7-67, No. NGR 14-005-111, Contract No. AF 33(615)-3890.

A similarity between the concepts of reproduction and explanation is observed which implies a similarity between the less well understood concepts of complete self-reproduction and complete self-explanation. These latter concepts are shown to be independent from ordinary logical-mathematical-biological reasoning, and a special form of complete self-reproduction is shown to be axiomatizable. Involved is the question of whether there exists a function that belongs to its own domain or range. Previously, Wittgenstein (1921) has argued, on intuitive grounds, that no function can be its own argument. Similarly, Rosen (1959, 1962) has argued that a paradox is implied by the notion of a function which is a member of its own range. Our result shows that such functions indeed are independent from ordinary logical-mathematical reasoning, but that they need not imply any inconsistencies. Instead such functions can be axiomatized, and in this sense they really do exist. Finally, the introduced notion of complete self-reproduction is compared with "self-reproduction" of ordinary biological language. It is pointed out that complete self-reproduction is primarily of interest in connection with formal theories of evolution. (Author)

DIRECT EPOXY EMBEDDING FOR VERTICAL SECTIONING OF CELLS GROWN AS A MONOLAYER ON MILLIPORE FILTER.

Helge Dalen and Timo J. Nevalainen (Pennsylvania State University, Dept. of Biophysics, University Park, Pa.).

(American Society for Cell Biology, Annual Meeting, 7th, Denver, Colo., Nov. 13-15, 1967.)

Stain Technology, vol. 43, no. 4, 1968, p. 217-220. 24 refs.

NIH Contract No. DE-01764; AEC Contract No. AT (30-1)-3834, Grants No. NaG-324; No. NGR-39-009-008.

Study of cells cultured as a monolayer on a MF-Millipore GSWP, 0.22-μ pore size, filter, which were fixed, dehydrated, and examined by phase-contrast microscopy with the filter immersed in a 1:1 mixture of xylene and the embedding medium. The membrane was cut into 2 x 20 mm strips, and each strip selected for desired cells was embedded vertically in a BEEM capsule. Thus direct embedding which allowed edgewise sectioning of cells was obtained without removing them from the culturing support. P.v.T.

RESPONSES OF HAMSTERS TO He-O<sub>2</sub> AT LOW AND HIGH TEMPERATURES - INDUCTION OF HYPOTHERMIA

B A Fischer (St Louis University, Dept of Biology, St Louis, Mo ) and X J Musacchia (Missouri, University, Dept of Physiology and Space Sciences Research Center, Columbia, Mo )  
American Journal of Physiology, vol 215, Nov 1968, p 1130-1136  
14 refs

Grant No NGR-26-004-021

Experimental investigation in which hamsters were exposed to 80% helium-20% oxygen (He-O<sub>2</sub>) and 80% nitrogen-20% oxygen (N<sub>2</sub>-O<sub>2</sub>) at various ambient temperatures. At room temperature hamsters in He-O<sub>2</sub> showed higher respiration rates, greater decrease in body weights, and lower body temperatures than those in N<sub>2</sub>O<sub>2</sub>. At 1, 5, 5, and 10°C, He-O<sub>2</sub>-exposed animals became hypothermic with body temperatures near ambient. At 12, 5°C about 50% of the experimental animals became hypothermic in He-O<sub>2</sub>. Hypothermia induced by exposure to 80% He-20% O<sub>2</sub> and cold is characterized by a complete atonia, The body is limp and relaxed. In addition, these animals readily rewarmed and reanimate, in 2 to 3 hr, when taken from the cold and placed at room temperature. N<sub>2</sub>-O<sub>2</sub>-exposed hamsters remained normothermic at low ambient temperatures. It was suggested that in the cold the greater thermal conductivity of helium brought about a heat loss greater than heat production, thus causing a fall in body temperature. At ambient temperatures of 30, 35, and 38, 5°C, He-O<sub>2</sub>-exposed animals were better able to maintain normal body temperatures than N<sub>2</sub>-O<sub>2</sub>-exposed hamsters. M M

ATMOSPHERIC AND PSYCHOPHYSIOLOGICAL EFFECTS ON THE  
 OBSERVATION OF AEROSPACECRAFT.

Bernard F. Klem (EG & G, Inc., Santa Monica Div., West Los  
 Angeles, Calif.).

Optical Society of America, Spring Meeting, San Diego, Calif.,  
 Mar. 11-14, 1969, Paper, 14 p.

Although the eye possesses a high degree of contrast sensitivity,  
 there are conditions under which an object will not be visible to an  
 observer, even when the luminance of the object is not equal to that  
 of the background space. An expression has been obtained for the  
 luminance which an object must possess for it to be undetectable by  
 an unaided observer, the object's luminance must match the back-  
 ground luminance to within the factor  $(1 \pm \epsilon/U)$ , where  $\epsilon$  is the  
 threshold contrast of the observer, dependent upon the size of the  
 object and an observer performance factor.  $U$  is the atmospheric  
 contrast transmission function, and for many realistic situations  
 depends solely upon the optical path thickness. Examples are pre-  
 sented to illustrate the variability in precision with which the lum-  
 inance of a large jet transport and a small single-engine aircraft  
 must match the luminance of the sky background so that the aircraft  
 are not visible to unaided observers. The observers are assumed  
 to be situated within a haze layer, viewing the aircraft along an up-  
 ward path of sight, at the same altitude as the aircraft, and with the  
 horizon sky as the background. In each case, the intrinsic luminance  
 profiles required for threshold visibility are compared with the  
 amount of luminance provided by natural illumination on simple  
 geometrical surfaces. (Author)

A MANUAL CONTROL-DISPLAY THEORY APPLIED TO INSTRU-  
 MENT LANDINGS OF A JET TRANSPORT

Warren F. Clement, Henry R. Jex, and Dunstan Graham (Systems  
 Technology, Inc., Princeton, N. J.)

(Institute of Electrical and Electronics Engineers, Symposium on  
 Human Factors in Electronics, 9th, Washington, D. C., May 6, 7,  
 1968)

IEEE Transactions on Man-Machine Systems, vol. MMS-9, Dec  
 1968, p. 93-110. 27 refs  
 Contract No. N 00014-66-C-0072

Description of an illustrative application of a theory for manual  
 control displays to the instrument landing approach of a large sub-  
 sonic jet transport. A methodical procedure is disclosed for formula-  
 tion of compensatory display-control systems. Manual approach  
 height and lateral position control are treated in multiloop dynamic  
 analyses so as to select preferred variables for measurement and  
 display. Closed-loop system performance and pilot scanning and  
 workload measures are also evaluated. The example concludes with  
 the "prediction" of a preferred display arrangement. Comparison  
 with an FAA Category II instrument panel arrangement selected by  
 an airline operating the example aircraft shows the predictions to be  
 remarkably accurate. (Author)

AN ANALYSIS OF PILOT ADAPTATION IN A SIMULATED MULTI-  
 LOOP VTOL HOVERING TASK

Edward W. Vinje (United Aircraft Corp., United Aircraft Research  
 Laboratories, East Hartford, Conn.)

IEEE Transactions on Man-Machine Systems, vol. MMS-9,  
 Dec 1968, p. 110-120. 5 refs

Investigation of human pilot adaptation in a simulated multiloop VTOL hovering task with a series-loop-closure model. Using the model equations, the pilot-model adaptable parameters were computed from rms hovering performance data measured in flight simulator experiments for a variety of VTOL aircraft configurations. Variations in the aircraft configurations affected both the aircraft's dynamic characteristics and its response to simulated turbulence. The pilot's pitch-loop adaptation generally correlated with the frequency-domain characteristics of the pitch response to turbulence and to control inputs. The results of the study show no specific low-frequency attitude gain requirements that must be satisfied by the pilot for the attitude disturbance and dynamic characteristics considered. P v T

**A69-23879 \*****MOTION CUES IN MAN-VEHICLE CONTROL**

Richard S. Shirley (NASA, Electronics Research Center, Office of Control Theory and Application, Cambridge, Mass.) and Laurence R. Young (Massachusetts Institute of Technology, Dept. of Aeronautics and Astronautics, Cambridge, Mass.)

IEEE Transactions on Man-Machine Systems, vol. MMS-9, Dec 1968, p 121-128. 5 refs.  
Grant No. NSG-577.

Investigation of the human operator's use of roll-motion cues for man-vehicle control in a compensatory tracking task with a disturbance input. Extensive data for the human operator's describing function are taken for a wide range of vehicle dynamics under conditions of visual cues only, roll-motion cues only, and simultaneous visual and roll-motion cues. Addition of roll-motion cues to visual cues permits the human operator to increase his phase lead at frequencies above 3 rad/sec. This makes it possible for him to increase the system open-loop gain without a loss of system stability, and thus to reduce the system tracking error. Experimental results indicate that in a compensatory system with a disturbance input, any condition in which additional human operator lead at frequencies above 3 rad/sec would be useful is a condition in which roll-motion cues would aid. P.v.T.

**A69-23880 \*****HUMAN INFORMATION PROCESSING RATES DURING CERTAIN MULTIAxis TRACKING TASKS WITH A CONCURRENT AUDITORY TASK**

Thomas E. Wempe and Daniel L. Baty (NASA, Ames Research Center, Moffett Field, Calif.)  
IEEE Transactions on Man-Machine Systems, vol. MMS-9, Dec 1968, p 129-138. 7 refs.

Description of experiments conducted to determine the information processing rates of several subjects performing one- and two-axis compensatory tracking tasks with a secondary auditory task. The experimental variables were the order of controlled element dynamics, the forcing function, and the addition of a secondary task. Human information processing rates decreased slightly on each tracking channel with the addition of the second tracking channel or the secondary auditory task. Other than this effect, the information processing rates were additive until a limit in the total information processing rate was reached. This limit was related to the order of the controlled element. (Author)

**A69-23881 \*****IDENTIFICATION OF SAMPLING INTERVALS IN SAMPLED-DATA MODELS OF HUMAN OPERATORS**

George A. Bekey and Caswell B. Neal (Southern California University, Dept. of Electrical Engineering, Los Angeles, Calif.)  
IEEE Transactions on Man-Machine Systems, vol. MMS-9, Dec 1968, p 138-142. 9 refs.  
Grant No. NGR-05-018-022

The synthesis of sampled-data models of human controllers has been hampered by the lack of systematic procedures for estimating the sampling frequency to be used in the model. This work presents two methods (programmed search and gradient search) for the determination of an unknown sampling frequency in closed-loop sampled-

data systems. Both methods are based on a priori knowledge of the structure of the system to be identified and require only measurements of the continuous input and output of the system. Several theorems concerning the identification problem are presented. The application of both the gradient search and programmed search techniques is illustrated by several examples. (Author)

## A69-24185

Results of an investigation conducted to evaluate the feasibility of protecting pilots from the vertical dynamic excitations experienced during low-level high-speed flight by means of active broadband isolation techniques. The required degree of vibration isolation and maximum relative displacement values are postulated based on definition of the environment, human tolerance levels, and cockpit clearance. The design of an active hydraulic system is described, which employs acceleration and displacement feedback mechanisms.

Analyses are presented to indicate the type of compensation and loop gains required to provide the desired degree of isolation and displacement control while maintaining system stability, for conditions of combined vibratory and sustained-acceleration excitation. Results of tests using a laboratory model show that the developed active hydraulic isolation technique provides the vertical isolation and displacement control postulated to be required for pilot protection during low-level, high-speed flight. In addition, the system exhibits zero static deflection, and is essentially insensitive to forces applied at the isolated payload, human body resonance coupling effects, external forces applied to the payload, and vibratory excitation levels.

AZOTOBACTER VINELANDII RIBONUCLEIC ACID POLYMERASE V - UNPRIMED SYNTHESIS OF POLY A POLY U  
Joseph S. Krakow (California, University, Space Sciences Laboratory, Berkeley, Calif.)  
*Biochimica et Biophysica Acta*, vol 166, 1968, p 459-465. 23 refs  
NIH Grant No. GM-12326, Grants No. NsG-479, No. NGR-05-003-020

Experimental investigation in which, following a short lag period, poly A poly U is synthesized by the *Azotobacter vinelandii* RNA polymerase in an unprimed reaction containing ATP and UTP. The synthesis of the polymers is accompanied by formation of aggregates which are retained at pH 8.0 on glass fiber filters. No polymers are formed in the presence of 0.1 mM ATP and UTP. At 0.6 mM ATP, 0.1 mM UTP, or 0.1 mM ATP, 0.6 mM UTP, synthesis of poly A poly U occurs with a lag period longer than that seen in the standard reaction.

UNBALANCED RESPIRATORY GROWTH OF EUGLENA  
J. R. Cook and B. Heinrich (Maine, University, Dept. of Zoology, Orono, Me.)  
*Journal of General Microbiology*, vol 53, 1968, p 237-251. 28 refs  
NIH Grant No. GN-12179, Grants No. NsG-338, No. NGL-20-006-001

Investigation of the respiratory physiology of *Euglena gracilis* grown heterotrophically on a defined medium, as a function of culture age when growth was supported by glucose, acetate, or ethanol as sole carbon source. The endogenous rate of oxygen consumption in general paralleled that of total protein content, usually showing a steady decline through logarithmic and stationary phases of growth. The rate of oxygen consumption stimulated by ethanol or acetate remained fairly constant during the logarithmic phase but decreased sharply in the early stationary phase. The specific activities of representative respiratory enzymes remained essentially proportional to one another and to total oxygen consumption. In general, respiratory growth was out of balance with the rate of cell division but in essential balance with the rate of biosynthesis.

DNA REPLICATION IN VIVO BY A TEMPERATURE-SENSITIVE POLYNUCLEOTIDE LIGASE MUTANT OF T4  
Junko Hosoda and Elaine Mathews (California, University, Space Sciences Laboratory, Berkeley, Calif.)  
*National Academy of Sciences, Proceedings*, vol 61, Nov 1968, p 997-1004. 22 refs  
Grants No. NsG-479, No. NGR-05-003-020

Discussion of an investigation which confirms the theory that polynucleotide ligase plays an essential role in DNA replication. It was found that a temperature-sensitive mutant of T4, tsA80, could initiate but could not continue DNA replication at 42°C.

DNA strands synthesized by tsA80 at 42°C were accumulated as short fragments when analyzed after denaturation. These fragments of DNA synthesized at 42°C served as precursors of long strands when the temperature of the culture was subsequently lowered to 25°C. The fragments of DNA synthesized at 42°C were not covalently connected to the bulk DNA previously synthesized at 25°C. The presence of a second mutation in gene 46 prevented the joining of the short DNA fragments accumulated at 42°C by tsA80 after subsequently lowering the temperature to 25°C.

IMPAIRED ORTHOSTATIC TOLERANCE AFTER BED REST IN PATIENTS WITH MYOCARDIAL INFARCTION  
Khaja Farreduddin and Walter H. Abelmann (Boston City Hospital, Thorndike Memorial Laboratory, Harvard University, Harvard Medical School, Dept. of Medicine, Boston, Mass.)  
*New England Journal of Medicine*, vol. 280, Feb. 13, 1969, p. 345-350. 20 refs.  
NIH Grants No. HE-10539, No. HE-5244, No. FR-76, Grants No. NsG-595, No. NGR-22-007-019.

In the presence of coronary atherosclerosis, systemic hypotension may result in acute ischemic damage to the myocardium. In 22 patients convalescing from acute myocardial infarction, orthostatic tolerance was studied by means of measurements of heart rate and blood pressure after bed rest. Tests were repeated after full mobilization in 16 patients. In five of 10 patients treated with strict bed rest for nine to 24 days, systemic blood pressure transiently fell by more than 38 mm Hg during 15 min of passive, upright tilt to 70°, a response abolished after full ambulation. This response was also seen in three of eight patients assuming a passive, sitting posture after strict bed rest. It was usually a symptomatic. The response was not observed in eight patients treated with modified bed rest. Strict bed rest in the treatment of acute myocardial infarction may result in cardiovascular deconditioning. Initial mobilization of such patients should be gradual and under careful supervision.

#### MEDICAL CARE OF AIRCREWMEN IN AN INDUSTRIAL ENVIRONMENT

William E Evans and Charles I Barron (Lockheed-Calif Co Burbank Calif)

*Journal of Occupational Medicine* vol 10, Dec 1968 p 688-691  
*Ind Med Assn*, 53rd Ann Meeting, San Francisco, Apr 22-25, 1968

The care of aircrewmens under company occupational health programs was discussed due to the increased usage of corporate aircraft as a medium for business travel. A description was provided of an Aircrew Effectiveness Program typical of the airframe industry. This program emphasizes the unique environment and recognizes the critical performance of the aircrew. The role of industrial medicine in support of business aviation was discussed. The industrial physician is already well qualified for the study of interactions between man and his environment. Minor expansion of his existing occupational health program will provide for an efficient Aircrew Effectiveness Program.

### A69-80753

#### CIRCULATION AND BREATHING DURING WORK USING A PROTECTIVE OXYGEN MASK [KREISLAUF UND ATMUNG BEI ARBEIT UNTER ATEMSCUTZMASKE]

H-J Wortowitz, D Szadkowski and K Muller (Erlangen-Nurnberg, U Inst fur Arbeits- und Sozialmed, West Germany)

*Arbeitsmedizin Sozialmedizin Arbeitshygiene* vol 3 Mar 1968, p 65-71 11 refs In German

The scope of the protective oxygen mask has been found to be important today in industry and emergency operations both in civilian and military populations. The technical investigations of the performance limiting characteristics of masks such as visibility interference, dead-space increment and respiration resistance elevation are known; however, only few medical publications have examined the effects on circulation, respiration and capacity in working humans. Therefore, 97 healthy young men were subjected to either increasing or constant severe ergometer loads up to maximum capacity, both with and without two-value controlled complete masks. Pulse, blood pressure and electrocardiograms indicated cardio-circulatory behavior under load. Details of the ergospirographic results were tabulated. The magnitude of the mask effect was proved to be dependent on (1) the maximal oxygen consumption, (2) the work-respiration minute volume, and (3) the endurance capacity. The respiration protective apparatus resulted in a statistically significant curtailing of the endurance capacity, oxygen consumption, (2) the work-respiration minute volume, and (3) the endurance capacity. The respiration protective apparatus resulted in a statistically significant curtailing of the endurance capacity during constant severe work, and in steady state, there was a statistically significant reduction of the maximum oxygen consumption and work-respiration time volumes in the last minute of work.

#### CHANGE IN THE RATE OF THE BASAL METABOLISM AND OXIDATIVE PHOSPHORYLATION IN THE LIVER MITOCHONDRIA UNDER THE EFFECT OF GLUTAMIC ACID IN HYPOXIA AND THYROIDECTOMY [IZMENENIE INTENSIVNOSTI OSNOVNOGO OBMENA I OKISLITEL'NOGO FOSFORILIROVANIYA V MITOKHONDRIYAKH PECHENI POD VLIYANIEM GLUTAMINOVY KISLOTY PRI GIPOKSII I TIREOIDEKTOMII]

M S Volkov and N A Glotov (Sverdlovsk Med Inst Dept of Biochem USSR)

*Ukrains'kyi Biokhimichnyi Zhurnal*, vol 40 no 5 1968, p 431-435 20 refs In Russian

The effect of glutamic acid on basal metabolism and the respiration and oxidative phosphorylation processes in the liver mitochondria was investigated in experiments conducted on intact and thyroidectomized rats in normal and hypoxic conditions. It was shown that glutamic acid administered to intact rats in normal conditions decreased the basal metabolism and in hypoxic conditions prevented its decrease. In thyroidectomized rats the glutamic acid had no influence on the basal metabolism both in normal and hypoxic conditions. A total ablation of the thyroid resulted in a drop of the levels of respiration and inorganic phosphate absorption by the liver mitochondria. Glutamic acid stimulated respiration and oxidative phosphorylation in the liver mitochondria in thyroidectomized animals both in normal and hypoxic conditions.

### A69-80755

#### EFFECT OF CHOLINE ON THE METABOLISM OF PHOSPHOLIPIDS IN RADIATION SICKNESS [VPLYV KHOLINU NA OBMIN FOSFOLIPIDIV PRY PROMENEVOMU URAZHENNI]

E F Sopin and V M Gaidai (Kiev State U Sci-Res Inst of Physiol T G Shevchenko Dept of Animal Biochem UkrSSR)

*Ukrains'kyi Biokhimichnyi Zhurnal* vol 40 no 5 1968, p 527-530 7 refs In Ukrainian

The content and the formation rate of total and single phospholipids were studied in the muscles, liver and brain of healthy and irradiated guinea pigs at the terminal stage of radiation sickness induced by exposure to acute total X-ray radiation doses of 500 r. It was determined that the administration of choline for ten days resulted in an increase of the lipid phosphorus level in all the tissues studied. The formation rate of the phosphate group in total and single phospholipids increased sharply in all the tissues studied while it decreased markedly in irradiated animals not receiving choline.

### A69-80756

#### ACETYLCHOLINE CONTENT IN CENTRAL NERVOUS SYSTEM OF RATS WITH CHRONIC HYPERCAPNIA

Sofia Navon and Alberto Agrest (Buenos Aires U, Inst de Invest Med, Cardiorespirat Unit Argentina)

*Life Sciences* vol 7 part 1 Dec 1 1968 p 1271-1275 21 refs

A group of 65 rats was permanently exposed to a gas mixture of 6 to 10% CO<sub>2</sub> and 18 to 20% O<sub>2</sub> in order to determine whether long-term hypercapnia has any effect on acetylcholine content in the brain. The adenosine triphosphate (ATP) concentration

#### A69-80757

was also determined. A significant fall ( $p < 0.001$ ) in acetylcholine was observed, reaching a minimum value by the 15th day. The ATP content of the central nervous system fell steadily to the 12th day, leveled off, and then increased after the 15th day, although not reaching normal values.

##### **ADAPTIVE CHANGES IN "REACTIVITY" AND WALL/LUMEN RATIO IN CAT BLOOD VESSELS EXPOSED TO PROLONGED TRANSMURAL PRESSURE DIFFERENCE**

Bjorn Folkow and Ramon Sivertsson (Goteborg U., Dept. of Physiol. Sweden)

*Life Sciences*, vol. 7, part 1, Dec. 1, 1968, p. 1283-1289. 8 refs.

Contract AF 61(052)-732, Grants PHS HE-05675-06 and SMRC B68-14X-16-04C. Swed. Natl. Assn. against Heart and Chest Diseases supported research.

To illustrate experimentally the effects on the resistance vessels of an adaptive change in wall/lumen ratio, one of the hind limbs in a series of cats was exposed for three to five weeks to moderate hypotension induced by ligation of some of its major arteries. In acute experiments, after establishment of identical arterial connections to both hind limbs, the resistance responses to graded vasoconstrictor fiber stimulations and intra-arterial noradrenaline infusions were compared in the calf muscle regions of the normal control limb and the earlier hypotensive test limb. The results indicated that there was no difference between the control limb and the test limb in terms of threshold response with respect to sensitivity to noradrenaline. However, to suprathreshold noradrenaline concentrations and to graded vasoconstrictor fiber stimulations, the resistance vessels of the control limb exhibited throughout more pronounced responses as compared with the test limb. These differences in the hemodynamic characteristics of the two limbs are in agreement with the fact that the arterial vessels in the earlier hypotensive limb showed an adaptive reduction in wall/lumen ratio. The bearing of these results with respect to changes in vascular wall/lumen ratio in hypertensive disease is briefly discussed.

##### **PATHOLOGY OF MONKEY RETINA FOLLOWING IRRADIATION WITH AN ARGON LASER**

Robert C. Rosan, Milton Flocks, Heinrich W. Rose, Robert R. Peabody (Stanford U. School of Med., Palo Alto, Calif.), Arthur Vassiliadis and Arin Hammond (Stanford Res. Inst. Electromagnetics Tech. Lab., Menlo Park, Calif.)

*Archives of Ophthalmology*, vol. 81, Jan. 1969, p. 84-88. 13 refs.

Contract AF 33(615)-3060 and Grant PHS NB-63401-01

The argon continuous wave laser was used to inflict experimental injuries to retinas of monkeys of an order similar to that which might be achieved in clinical situations. These lesions differed markedly from previously reported retinal injuries induced by ruby and neodymium lasers and by xenon photocoagulator. It was found possible to fundamentally change the structural patterns of the media and adventitia of retinal arteries and to consistently thrombose choroidal vessels but not retinal arteries under the conditions employed.

##### **EVALUATION OF PROLIFERATIVE AND MATURATIVE ACTIVITY OF THE BONE MARROW DURING EXPERIMENTAL BENZENE INTOXICATION [VALUTAZIONE DELL'ATTIVITA' PROLIFERATIVA E MATURATIVA DEL MIDOLLO OSSEO IN CORSO DI INTOSSICAZIONE BENZOLICA SPERIMENTALE]**

G. Castaldi, R. Spanedda, P. L. Pareschi and B. Dallapiccola (Ferrara U. Ist. di Clin. Med. Gen. e Terapia Med., Italy)

*Lavoro Umano*, vol. 20, Jul. 1968, p. 293-308. 88 refs.

Contract CNR 115-1135-04690

The results of a study on rabbit bone marrow during subacute experimental benzene intoxication were reported. An increase of mitotic indices and metaphases with an arrest of the maturation in the basophil erythroblasts in myeloblasts and in promyelocytes was detected at the third and fifth day of intoxication. After treatment's discontinuation, mitotic indices decreased rapidly, for the proliferative inefficiency of the bone marrow. At this stage, the maturation curves of the white cell series appeared to be still inhibited. Red cell series, on the contrary, showed a variable degree of maturation.

##### **SOME FEATURES OF BARBITURATE INTERACTION AND INHIBITION OF NADH-CYTOCHROME C OXIDOREDUCTASE IN RESPIRING SYSTEMS**

Herbert E. Spiegel and W. W. Wainio (Rutgers-The State U., Rutgers Coll., Dept. of Biochem., New Brunswick, N. J.)

*Journal of Pharmacology and Experimental Therapeutics*, vol. 165, Jan. 1969, p. 23-29. 29 refs.

Grant NSF GB2649 and Schering Found. supported research.

The inhibitory effects of barbiturates on the NADH-cytochrome c oxidoreductase enzyme were studied in respiring mitochondrial and submitochondrial preparations. These included a particulate enzyme derived from sucrose mitochondria and a 0.2% deoxycholate extractable enzyme derived from a Keilin-Hartree particle. Inhibition by the barbiturates was localized between the enzyme, flavoprotein, and coenzyme Q-1. Blockade at this site probably involves interaction between the barbiturate, the enzyme, and a coenzyme Q-ferrous complex. Other features of the barbiturate inhibition which were studied are the correlations of lipid solubility and of ability to lower surface tension of water with inhibition of the enzyme. The correlation of inhibition by barbiturates with lipid solubility was high ( $r = 0.95$ ), whereas the correlation with lowering surface tension was moderate ( $r = 0.66$ ). Interaction reversibility by amobarbital with respiring particles was shown to be reversible and without effect on subsequent sensitivity to added barbiturate.

#### A69-80761

##### **THE DIRECT EFFECT OF NOREPINEPHRINE AND OF ANGIOTENSIN ON THE PULMONARY VEINS OF INTACT DOGS**

Albert Hyman (Tulane U., School of Med., Dept. of Surg., New Orleans, La.)

*Journal of Pharmacology and Experimental Therapeutics*, vol. 165, Jan. 1969, p. 87-96. 26 refs.

The direct response of the pulmonary veins to angiotensin and norepinephrine in intact dogs was studied by a technique of pump perfusion of a hemodynamically separated lobar artery at a constant flow. During administration, the direct effects of these pressor agents were studied in the pump-perfused lobe, whereas the modulated effects were studied in the normally perfused lobes. In

the pump-perfused lobe angiotensin actively constricted vessels upstream to the small pulmonary veins presumably the pulmonary arteries but had no demonstrable effect on the pulmonary veins. Although lobar arterial pressure increased lobar venous pressure was unchanged. In normally perfused lobes the vasoconstrictor response to angiotensin was obscured by the decrease in pulmonary veins and the upstream vessels presumably the lobar pulmonary arteries. In the normally perfused lung vessels the response to norepinephrine was modified by increases in blood flow and blood volume. Larger doses of norepinephrine and angiotensin increased left arterial pressure and modulated the responses of lobar veins. This modulated response was compared to the passive response of the pulmonary veins to similar increases in left arterial pressure which were produced by mechanically impeding left ventricular ejection. The data indicated that whereas the lobar veins were passively distended by the left arterial hypertension induced by norepinephrine, the compliance of these vessels decreased. The response of the lobar vein to the left arterial hypertension induced by angiotensin, however, was similar to that induced by impeding left ventricular ejection. These experiments indicate that the responses of the pulmonary veins to angiotensin and norepinephrine are similar to the responses of systemic veins to these drugs.

**A69-80762****THE EFFECT OF D- AND L-NOREPINEPHRINE ON RAT CARDIAC PHOSPHORYLASE ACTIVATION**

John H McNeill and Theodore M Brody (Mich State U Dept of Pharmacol East Lansing)

*Journal of Pharmacology and Experimental Therapeutics* vol 165, Jan 1969, p 97-101 13 refs

Mich Heart Assn and Merck Found supported research

Intact, anesthetized rats were infused with various doses of d- and l-norepinephrine and the activity of the enzyme glycogen phosphorylase was determined. The d-isomer of norepinephrine activated the enzyme to the same extent as did the l-isomer but was 1/27 as potent. Simultaneous infusions of both d- and l-norepinephrine resulted in a shift to the left of the l-norepinephrine dose-response curve. Pretreatment with tripeleminamine did not further shift the dose-response curves obtained when d- and l-norepinephrine were infused together or when d-norepinephrine was infused alone. Reserpine pretreatment did not affect the response to d-norepinephrine but the response was blocked by propranolol. It was concluded that d-norepinephrine has a direct action on the cardiac *beta* adrenergic metabolic receptor and that d-norepinephrine utilizes the same active uptake mechanism as l-norepinephrine in the rat heart.

**A69-80763****MUSCLE REFLEX CHANGES UNDER EMOTIONAL STRESS**

Kurt Boman and Erkki Kivalo (Helsinki U Dept of Neurol Finland)

*Annales Academiae Scientiarum Fennicae, Ser A V Medica*, 135 1968, 19 p 30 refs

Signe och Ane Gyllenbergs Stiftelse supported research

The effect of emotional stress on myotatic reflexes of 33 healthy students was investigated. The subjects were seated in a convenient chair and under identical quiet circumstances knee jerks were elicited by the same supraximal mechanical stimulus with a frequency of two per minute during a period of two to three hr. The angular reflex movements were recorded by an electric goniometer. Fifteen subjects were examined in this way twice or more often. In the first series the basis reflex activity was recorded only but in the second series the subjects had to perform hard

mental arithmetics during a period of 30 to 45 min after a relaxation time of about 40 to 60 min. Eighteen subjects were examined only once similarly to the subjects in the second series described above. The values of the jerk amplitudes obtained under relaxed pre-stress circumstances were compared with those obtained under emotional stress. During the emotional stress a marked increase in the jerk amplitudes varying between 4.5° and 13.3° was observed in 16 subjects and a slight to moderate increase varying between 0.1° and 3.6° in 10 subjects. A marked decrease in jerk amplitude values varying between 4.5° and 8.5° was seen in four cases and a slight to moderate decrease varying between 0.3° and 2.3° in three cases. It was concluded that emotional factors can exert a marked influence on the fusimotor system which regulates principally the excitability of the myotatic reflexes. During emotional stress also clonic reflexes, an increased number of leg oscillations and an increased angular velocity of the free swinging leg were observed. The results were discussed.

**A69-80764****THE ENDOGENOUS RESPIRATION AND UREA PRODUCTION OF LIVER TISSUE SLICES FROM HIBERNATING AND NON-HIBERNATING HEDGEHOGS AND FROM COMMON FROGS ACCLIMATED TO DIFFERENT AMBIENT TEMPERATURES**

Rolf Kristoffersson (Helsinki U Dept of Physiol Zool Finland)

*Annales Academiae Scientiarum Fennicae Ser A IV Biologica* 129 1968, 14 p 23 refs

Natl Res Council for Sci supporter research

The present study concerned the endogenous respiration and urea production of liver tissue from hibernating and non-hibernating hedgehogs and from common frogs acclimated to different ambient temperatures. The results indicated that the oxygen consumption of liver tissue was significantly decreased in deeply hypothermic hedgehogs as compared with awake animals at all incubation temperatures tested between 5° and 35° C. No corresponding difference could be demonstrated between cold- and warm-acclimated frogs. Liver tissue of frogs was found to have a lower respiration rate than that of hedgehogs. The urea production of liver tissue from deeply hypothermic hedgehogs was significantly retarded as compared with that of awake animals during *in vitro* incubation. In this respect no difference was found between frogs acclimated to 5° or to 15° C. However, the group of frogs acclimated to 25° C exhibited a somewhat retarded rate of urea production.

**A69-80765****SPATIAL AND LUMINANCE FACTORS DETERMINING VISUAL EXCITABILITY**

Thomas E Frumkes (NY City U Queens Coll Flushing) and Joseph F Sturr (Syracuse U N Y)

*Journal of the Optical Society of America* vol 58, Dec 1968 p 1657-1662 18 refs

*Opt Soc of Am, Meetings Columbus, Mar 1967*

Grants PHS 1-F2-MH-32 850-01 and PHS NBO6618-01

Excitability functions were determined by measuring the threshold luminance of a circular test flash (43 five msec) at various temporal intervals before and after the onset of a larger concentric 25-msec conditioning flash (CF). The paired stimuli were presented in maxwellian view to the right eye either centrally, or 7° or 15° in the nasal field. The CF was either 57 1°50, 2°43 or 3°30 in diameter and was either scotopic, or one of two photopic luminances. The results showed that (1) luminance was the most powerful nontemporal determinant of the increment

**A69-80766**

threshold and (2) as the conditioning diameter increased test threshold decreased with central or 7° photopic stimuli but with scotopic peripheral stimuli the test threshold increased and then decreased For photopic stimuli at 15° increasing the CF diameter generally raised the increment threshold In general the diameter for maximal increment threshold became progressively larger as luminance was decreased or as stimulation occurred farther in the periphery These results were discussed in terms of the neural organization under different conditions of luminance and retinal position

**A69-80766**

**PERFORMANCE CHARACTERISTICS OF FIELD DEPENDENT AND INDEPENDENT INDIVIDUALS ON AN AUDITORY SIGNAL DETECTION TASK**

Victor J DeFazio and William F Moroney (St John's U Dept of Psychol Jamaica N Y)

*Journal of Psychology* vol 71 Jan 1969 p 77-82 12 refs

A previous investigator reported that the field-analytic approach was erroneously generalized to include all sense modalities The Embedded Figures Test (EFT) which requires subjects to detect a figure in a background was used to differentiate the field-dependent group (N=10) from the field-independent group (N=10) In an analogous task the theory of signal detection procedures (TSD) was used and subjects were required to detect a tone in a white-noise background No significant field-independent group (N=10) In an analogous task the theory of signal detection procedures (TSD) was used and subjects were required to detect a tone in a white-noise background No significant differences were noted between groups with respect to response time criterion values or sensitivity nor was any relationship noted between EFT score and performance on the auditory detection task

**A69-80767**

**THE EFFECT OF LEADING CONTOUR ON THE RELATIVE LENGTHS OF MOVING LIGHT AND DARK ARCS**

Gordon Stanley and Robert Jackson (New England U Dept of Psychol Armidale New South Wales Australia)

*Journal of Psychology* vol 71 Jan 1969 p 83-88 8 refs  
New England U supported research

Twenty subjects were required to estimate the relative lengths of the white and black teeth on a Sherrington disc rotating at 90 r p m Judgments were obtained with a standard black tooth of 12 cm in length and a white tooth varying from eight to 16 cm in length When the disc-center which subtended a visual angle of seven degree 10 min to the teeth was fixated under conditions of a leading but no trailing contour there were significantly fewer white longer judgments than under conditions of a trailing but no leading contour Apparent shrinkage was occurring in the former condition but not in the latter As the peripheral angle of viewing was increased the presence or absence of Friedman leading contour produced little difference in the relative judgments of the arc lengths

**A69-80768**

**EFFECT OF DURATION OF ENVIRONMENTAL STRESS ON STOMACH ULCERATION AND ADRENAL ASCORBIC ACID**

William P Pare (Veterans Admin Hosp Perry Point, Md)

*Psychological Reports*, vol 23, part 1 Dec 1968, p 683-688  
15 refs

Grant PHS MH 06920-01

Four groups of rats were exposed to unavoidable tone-shock presentations for either one hr 24 hr five days or 24 days Upon termination of each stress-duration period adrenal ascorbic acid (AAA) determinations were made and stomachs were inspected for ulcers The AAA response manifested the typical adaptation function Ulcers were not observed in any of the four stress-duration groups Previous similar research was re-evaluated in the light of the present research findings

**A69-80769**

**AROUSAL LEVEL AND INVESTIGATIVE RESPONSE**

Robert L Hilgendorf (Aerospace Med Div Aerospace Med Res Labs Wright-Patterson AFB Ohio)

*Psychological Reports* vol 23 part 1 Dec 1968, p 715-721  
11 refs

This study was concerned with the relationship between investigative response and arousal level including change in arousal level Data were from 18 subjects placed in both a task situation and an investigative situation Subjects were divided into two groups based on whether their skin resistance level (SRL) increased or decreased during the investigative period when compared with the SRL during the task period It was found that the group whose members had shown an increased level (as measured by SRL) investigated significantly less during the investigation period and had significantly higher general test anxiety (as measured by the Test Anxiety Questionnaire) than the group whose members had shown a decrease in resistance level

**A69-80770**

**HUMAN METABOLIC RESPONSES TO HYPERTHERMIA DURING MILD TO MAXIMAL EXERCISE**

L B Rowell G L Brengelmann J A Murray, K K Kraning II and F Kusumi (Wash U School of Med School of Nursing and *Journal of Applied Physiology*, vol 26 Apr 1969, p 395-402  
32 refs

Grants PHS HE 09773 and PHS FR 37 Wash State Heart Assn supported research

The purpose was to determine whether oxygen consumption ( $V_{O_2}$ ) is increased or decreased in hyperthermic exercising men Arguments for both possibilities have been advanced In 54 men studied in three different experimental protocols increased temperature of skin ( $T_s$ ) blood and rectum had no effect on submaximal  $V_{O_2}$   $V_{O_2}$  at 25.6° C was compared with  $V_{O_2}$  under the following conditions (a) prolonged work requiring 41-54% of maximal  $V_{O_2}$  at 48.9° C (seven men) (b) prolonged requiring requiring 26-64% maximal  $V_{O_2}$  during which  $T_s$  was rapidly changed (via a water-perfused suit) at 30-min intervals from approximately 33° C to 38° C 26° C and 39° C (16 men) (c) four 15-min periods of graded exercise requiring 25-85% of maximal  $V_{O_2}$  at 43.3° C (27 men) In these 27 men at 43.3° C and four other subjects at 48.9° C maximal  $V_{O_2}$  was reduced 3% of graded exercise requiring 25-85% of maximal  $V_{O_2}$  at 43.3° C (27 men) In these 27 men at 43.3° C and four other subjects at 48.9° C maximal  $V_{O_2}$  was reduced 3% ( $P < 0.01$ ) Results indicate negligible extra costs of increased cardiac output  $V_E$  and sweating and an increase in muscle efficiency at least offsetting  $Q_{10}$  effects

**HEAT TOLERANCE OF EXERCISING OBESE AND LEAN WOMEN**

O Bar-or, H M Lundegren and E R Buskirk (Pa State U, Inst for Sci and Eng Lab for Human Performance Res University Park)

*Journal of Applied Physiology* vol 26 Apr 1969 p 403-409  
23 refs

Grant PHS AM 08311

Five obese and four lean women were each exposed to six different walks in controlled environments ranging from warm to hot. Walking conditions were 4.8 km/hr and the environmental range was 21.1-35.0°C effective temperature with a relative humidity of 13-20%. Environmental conditions were kept constant during a given session. With either the critical effective temperature in which rectal temperature becomes dependent on the heat-stress level or the heat stress at which rectal temperature reaches 39.2°C as criteria for heat tolerance, the women showed tolerance similar to that reported for comparably acclimatized men who performed similar work loads. The obese women were under higher heat strain than were the lean, a difference which diminished with increasing heat stress. The latter finding may be explained by a larger surface area per kg in the lean which at high ambient temperatures results in the imposition of a greater relative heat load via radiation and convection in the lean as compared to the obese.

##### MODIFICATION OF SKIN MECHANICAL PROPERTIES BY ECCRINE SWEAT GLAND ACTIVITY

Thomas Adams and William S Hunter (Mich State U Dept of Physiol East Lansing)

*Journal of Applied Physiology* vol 26 Apr 1969 p 417-419  
15 refs

Skin friction at footpad surface was measured in anesthetized (Na pentobarbital 36 mg/kg, ip) cats at 12 different steady-state levels of sweating with 19 separate footpads. Sweat secretion was controlled by electrical stimulation of the peripheral segment of the severed medial plantar nerve. Skin friction was measured as a function of the horizontal force ( $F_H$ ) required to move a small (2.5 cm<sup>2</sup> 3 mm thick) deglazed, plastic plate over skin surface at a rate of 5 mm/min. In separate experiments, amounts of water evaporated from skin surface were also measured as a function of controlled sweat secretion. Compared to nonsweating skin, low rates of sweat gland activity produced progressive increase in skin frictional contact, resulting in an average maximum increase in  $F_H$  of 51%, higher steady-state rates of sweating progressively decreased skin friction. During maximum sweating,  $F_H$  was lowered to an average of 6% below that recorded for dry skin. These observations are interpreted as indicating that at low sweating rates eccrine sweat gland activity can modify water content of outer skin, presumably because of movement of sweat from lumen of the distal sweat gland tubule directly into the adjacent, relatively drier peritubular skin. Changes in skin hydration so produced are accompanied by changes in frictional contact at skin surface.

#### A69-80773

##### VENTILATION-PERFUSION RELATIONSHIPS IN THE OBSE PATIENT

Frank Barrera, Marcus M Reidenberg, William L Winters and Suwana Hungspreugs (Temple U School of Med, Depts of Physiol Pharmacol and Med Philadelphia Pa)

*Journal of Applied Physiology*, vol 26, Apr 1969 p 420-426  
28 refs

Grants PHS HE-06313-06 and PHS FR-00349

In a group of eight obese patients and six controls, analysis of the washin-washout curves by the method of Briscoe and

Cournand demonstrates that the distribution of ventilation to the various lung compartments in the obese patient is not significantly different from the normal subject. The distribution of blood flow throughout the lung was studied in two different but related ways: (a) Predicted alveolar-arterial oxygen tension difference ( $(A-a)D_{O_2}$ ). The predicted  $(A-a)D_{O_2}$  was calculated assuming that perfusion is distributed in proportion to lung volume. In three obese patients the measured  $(A-a)D_{O_2}$  was larger than the predicted  $(A-a)D_{O_2}$ , suggesting that in these cases the less ventilated alveoli were relatively overperfused. (b) Actual distribution of perfusion. By the use of Briscoe's logarithmic grid, the fractional perfusion to the less ventilated lung compartment is obtained. A ratio between fractional perfusion and fractional lung volume in the less ventilated group of alveoli higher than 1.0 was found in four obese patients, suggesting that the less ventilated alveolar group was overperfused. In three obese patients a large anatomical shunt was found. The anemia without hypercapnia found in some obese patients is related to overperfusion of underventilated areas or to perfusion of completely unventilated areas.

##### CONTINUOUS POSITIVE-PRESSURE BREATHING IN ACUTE HEMORRHAGIC PULMONARY EDEMA

Takeishi Uzawa and David G Ashbaugh (Colo U Med Center Dept of Surg Denver)

*Journal of Applied Physiology*, vol 26 Apr 1969 p 427-432  
16 refs

Contract DADA-17-68-C-8078 and Grant VRA-RT-10

After the injection of small amounts of oleic acid into the right ventricle of dogs, a syndrome of tachypnea, loss of lung compliance, and hypoxemia occurred. Without respiratory support, all animals died within five hr (mean two hr). Both intermittent positive-pressure breathing (IPPB) and continuous positive-pressure breathing (CPPB) prolonged life, but animals treated with CPPB maintained higher  $Pa_{O_2}$  levels, better lung compliance, lower minute ventilation, and lower oxygen consumption than the animals treated with IPPB. Cardiac output and oxygen transport were decreased to a greater extent with CPPB than IPPB, but no adverse effects were noted as a result of this decrease.

#### A69-80775

##### EFFECT OF INSPIRATORY FLOW RATE ON REGIONAL DISTRIBUTION OF INSPIRED GAS

P C Robertson, N R Anthonisen and D Ross (McGill U Roy Victoria Hosp Joint Cardio-Respirat Serv Montreal Canada)

*Journal of Applied Physiology* vol 26 Apr 1969, p 438-443  
10 refs

John A Hartford Found and Med Res Council supported research

Boli of  $^{133}\text{Xe}$  were inspired at different flow rates from residual volume (RV) or higher lung volumes in seven erect subjects.  $^{133}\text{Xe}$  concentrations were measured in various lung regions at total lung capacity (TLC). During the subsequent slow expiration to RV, the  $^{133}\text{Xe}$  concentration at the mouth was measured. Boli inhaled at RV were distributed preferentially to apical regions by slow inspiratory flow rates (0.2-0.3 l/sec) but fast inspiration (3-5 l/sec) produced a more even regional distribution. The apex-to-base concentration gradient was 10:1 after slow inspirations and 2:1 after fast inspirations. Fast inspiration produced conspicuous flattening of the expiratory  $^{133}\text{Xe}$  alveolar plateau when compared to that obtained after slow inspiration. These results are compatible with closure of basal airways at RV and their earlier opening by the greater transpulmonary pressures required for fast inspiration. Boli inhaled above 40% of vital capacity (VC) were distributed mainly to basal regions, but fast inspiration produced a slightly more even

**A69-80776**

distribution than slow inspiration, implying that sequential distribution of ventilation was potentially present at these lung volumes

**A69-80776****COMPARISON OF THERMOREGULATORY FUNCTION IN MEN AND WOMEN**

R H Fox, B E Lofstedt, Patricia M Woodward E Eriksson and B Werkstrom (Hampstead Labs Natl Inst for Med Res London, Great Britain and Lund U Dept of Hyg Sweden)

*Journal of Applied Physiology* vol 26, Apr 1969 p 444-453  
33 refs

Thermoregulation in 21 young men and 21 young women was studied by a mobile standard function test at Lund in Sweden the results are analyzed together with comparable measurements on a control group of British male subjects before and after heat acclimatization. The principal differences between the two sexes at Lund concerned the sweating mechanism, the women had a much higher sweat onset threshold, lower sweating capacity and no significant rate of sweat suppression. In addition a difference was found in the relationship of ear-to-rectal temperatures in the two sexes. The comparisons with the control group show that most of the differences between the sexes are similar to those that exist between acclimatized and unacclimatized men. The results are discussed in relation to previous studies and the hypothesis is put forward that many of the differences between the sexes previously reported can be simply explained in the same way, also there are logical reasons for expecting women to be less heat-acclimatized than men when both sexes are living in identical climatic conditions

**A69-80777****CARDIAC OUTPUT DETERMINATION FROM PRECORDIAL ISOTOPE-DILUTION CURVES DURING EXERCISE**

Frank E Kloster, J David Bristow, and Herbert E Griswold (Ore U Med School Dept of Med Div of Cardiol Portland)

*Journal of Applied Physiology*, vol 26 Apr 1969 p 465-468  
15 refs

Grant PHS HE 06336-06

Duplicate cardiac output studies during exercise were performed by the Fick and radioisotope-dilution (albumin-<sup>131</sup>I) methods in 30 patients with heart disease. Ten were studied by the conventional albumin-<sup>131</sup>I technique with precordial detection of isotope. Twenty were studied by a modified technique which allowed collection of all data for cardiac output calculation during a 1-min period after 5 min of exercise. Mean cardiac output value for the modified radioisotope method was identical with the Fick, and correlation between the two was high ( $r = 0.86$   $P < 0.001$ ). Results of the conventional technique were lower than Fick values ( $0.02$   $P < 0.01$ ) although correlation was again high ( $r = 0.93$   $P < 0.01$ ). Cardiac output determination by the modified radioisotope-dilution technique during exercise agrees closely with simultaneous Fick studies and offers advantages over the conventional method in permitting data collection during a short time period and in avoiding prolonged exercise. Both techniques provide the features unique to the albumin-<sup>131</sup>I method: minimal vascular cannulation and ready adaptation to bedside or outpatient studies without risk.

**A69-80778****PORTABLE, MULTIUNIT LOW-PRESSURE CHAMBER WITH LOCKS**

Pharmacol-Biochem Brooks AFB Tex)

A portable multiunit low-pressure chamber with locks is described. It is designed to be used in small-animal experiments and permits the investigator to introduce and remove food dishes and replenish drinking water while the animal is continuously exposed to low pressures and experimental gas mixtures.

**A69-80779****THEORY OF SHEET FLOW IN LUNG ALVEOLI**

Y C Fung and S S Sobin (Calif, U San Diego and Southern Calif, U Los Angeles)

*Journal of Applied Physiology* vol 26 Apr 1969 p 472-488  
19 refs

Grants AFOSR 1186-67 NSF GK-1415 and PHS HE-1152

The capillary blood vessels in the pulmonary alveoli are so short and so closely knit that a new term sheet flow is desirable to avoid the usual notion of a blood vessel as a tube. From the viewpoint of fluid mechanics the new terminology is particularly pertinent. In this article the flow pattern of the blood in such a sheet is considered. A theoretical approach as well as a large-scale model study has been undertaken to determine the streamlines, the velocity distribution, and the pressure gradient in the pulmonary alveolar septa. The role of the elasticity of the system is considered. It is shown that in the range of linear elasticity, the fourth power of the thickness of the sheet satisfies the Laplace equation. The thickness distribution as a function of pulmonary arterial pressure, venous pressure, and alveolar air pressure is illustrated by several examples.

**A69-80780****A BALANCED FIELD-TYPE ELECTROMAGNETIC FLOWMETER**

A Westersten, E Rice, C R Brinkman and N S Assali (Calif U, School of Med Depts of Obstet and Gynecol and Physiol, Los Angeles)

*Journal of Applied Physiology* vol 26 Apr 1969, p 497-500  
9 refs

Grants PHS HE 01755 PHS HD 2729 and PHS HD 38

A new design of an electromagnetic flowmeter is presented. This flowmeter eliminates interference between simultaneously energized transducers. This feature permits measurements of several blood flows simultaneously without any base-line shift or signal distortion. This flowmeter does not require mechanical occlusion of the blood vessel to obtain zero base line. A newly designed device for *in vitro* calibration of cuff-type transducers is also presented.

**A69-80781****A CONTINUOUS AUTOMATED SAMPLING TECHNIQUE**

Michel G Nasser, Maria Wachter and Robert B Case (St Luke's Hosp Center Lab of Exptl Cardiol New York City, N Y)

*Journal of Applied Physiology* vol 26 Apr 1969, p 501-503  
9 refs

Grant PHS HE0-2621

A method is described for continuously monitoring the metabolic state of the left ventricle. The method employs a continuous automated sampling technique which offers a number

of advantages over traditional sampling methods and results in a precise measurement of alterations in myocardial balance. The method is applicable to organs other than the heart or simply to venous sampling.

**A69-80782****A TECHNIQUE FOR MAPPING INTRAMUSCULAR INNERVATION**

Margaret H Gladden and G L Kidd (Liverpool, U. Physiol Lab Great Britain)

*Journal of Applied Physiology* vol 26, Apr 1969, p 507-509  
Med Res Council supported research

A preparation of the caudal muscle is described that is ideal for physiological and pharmacological studies of muscle. A thin sheet of muscle with its circulation undisturbed is almost completely transparent and the intramuscular distribution of its nerve supply can be traced with the aid of a dissecting microscope. The innervation is accessible to recording and stimulating electrodes and structures studied electrophysiologically may be identified histologically by means of a described in situ staining procedure.

**A69-80783****CLIMATIC CHAMBER ERGOMETER**

A R Atkins (South Africa, Chamber of Mines Phys Sci Lab Johannesburg)

*Journal of Applied Physiology* vol 26 Apr 1969, p 510-512

An ergometer for exercising subjects during calorimetric studies in a climatic chamber is described. The ergometer is built into the climatic chamber and forms an integral part of the whole instrumentation system for the chamber. The ergometer pedal wheel has an unusual single spoke on which strain gauges are attached for the purpose of measuring the input torque so that errors due to frictional losses in the long chain drive to the load are eliminated. The ergometer load which is controlled automatically to maintain a constant work rate is situated beneath the climatic chamber floor. Work-rate measurement is accurate to within 1% of full scale.

**A69-80784****VALIDATION OF A METHOD FOR BLOOD FLOW IN ADIPOSE TISSUE OF RATS BY CLEARANCE OF Rb 86**

Joan A Mayerle and Richard J Havel (Calif U., Med Center Cardiovascular Res Inst and Depts of Physiol and Med San Francisco)

*Journal of Applied Physiology*, vol 26, Apr 1969 p 513-516  
18 refs

Grants PHS HE-06285 PHS GM-00927, and PHS HE-5251

$^{86}\text{Rb}$  was measured in tissues obtained 60 sec after intravenous pulse injection and cardiac output was estimated from dilution of isotope in blood collected from an aortic catheter. The following observations indicate that flows estimated from product of fractional clearance of  $^{86}\text{Rb}$  in epididymal mesenteric, retroperitoneal and intrascapular fat was stable 30-60 sec after injection but lower after 90 sec. Flow measured from the spermatic vein of large castrated rats agreed closely with values obtained simultaneously by the clearance method. Mean values and standard errors for 10 rats (ml/min  $\times$  g wet weight) were  $0.057 \pm 0.014$  from clearance of  $^{86}\text{Rb}$  and  $0.053 \pm 0.013$  for directly measured flow. Fractional extraction during constant infusion of  $^{86}\text{Rb}$  was 0.79 for epididymal fat and 0.80 for the region drained by inferior vena cava.

**A69-80785****EFFECTS OF DURATION OF SERIES AND ANCHOR-STIMULI ON JUDGEMENTS OF PERCEIVED SIZE**

Harry Helson and Takashi Kozaki

*American Journal of Psychology*, vol 81, Sep 1968 p 291-302  
10 refs

Kan State U York U and Natl Res Council supported research

Two experiments dealing with the effects of duration of series and anchor-stimuli on estimates of perceived size were reported. In Experiment I, different estimates of the same series stimuli were obtained by varying duration. Longer exposure-times of the larger members of the series resulted in higher adaptation levels (AL) with lower estimates while longer exposure of the smaller members of the series resulted in lower AL with higher estimates of size of all series stimuli. In Experiment II the duration of the series stimuli was kept constant while that of a large anchor and a small anchor was varied. Longer duration of the large anchor resulted in higher AL and lower estimates while longer duration of the small anchor resulted in lower AL with higher estimates of size of series stimuli. A simple weighted log mean of series and anchor-sizes by time showed AL that were in excellent agreement with least-squares AL for five conditions. The results of the two experiments showed that duration and size pool in formation of AL with resultant effects on judgments of size. The method of absolute judgment reliably differentiated between independent groups observing under different conditions of stimulation. Predictions based on the effects of temporal integration on prevailing AL were confirmed by estimates of size under eight different conditions of stimulation.

**A69-80786****EGOCENTRIC VISUAL LOCALIZATION IN NORMALS AND PARTIALLY BLIND DURING EXPOSURE TO CENTRIPETAL FORCE**

Brant Clark (San Jose State Coll., Calif) and Ashton Graybiel (Naval Aerospace Med Inst., Pensacola Fla.)

*American Journal of Psychology*, vol 81 Sep 1968 p 314-318  
8 refs

NASA supported research

The purpose of this experiment was to compare the interaction of visual and nonvisual information during the perception of the visual horizontal in 12 normal and seven partially blind subjects during exposure to centripetal force. Both the normal and the partially blind subjects had normal vestibular functions. The subjects set a collimated luminous line to the horizon in darkness while they sat in a cockpit 20 ft from the center of rotation. Settings were made with the device stationary and during rotation at three velocities. The results showed negligible differences between the normals and the partially blind for all conditions. Both groups showed minimal errors during the static series both before and after rotation and during rotation their settings were very close to the resultant horizontal. It was concluded that interaction between visual and nonvisual information is possible with extremely limited central vision.

**A69-80787****PERCEPTUAL SERIAL-POSITION CURVES WITH A FREQUENTLY ISOLATED ELEMENT**

E Rae Harcum (William and Mary Coll Williamsburg Va.)

*American Journal of Psychology*, vol 81 Sep 1968 p 334-346  
28 refs

Grant PHS HD-00207-08

## A69-80788

This experiment supplemented an earlier one in which an isolation effect was obtained in perceptual serial-position curves only when subjects had advance knowledge of the isolation. Ten-element binary patterns were exposed tachistoscopically to subjects in three groups. For the Isolated (I) group all patterns contained vertical lines above and below the seventh element from the left. For the Unisolated (U) group there were no such lines. I and U patterns were mixed randomly for the Mixed (M) group which was not informed before exposure whether the lines would appear. For Group M reproductions of U and I patterns were not significantly different supporting the earlier results, although an isolation effect appeared for both conditions contrary to previous findings. The results support the conclusion that different distributions of errors are caused by different perceptual strategies which are generally established by the subject prior to stimulus-exposure and for which the physical presence of an isolating stimulus is not critical.

## A69-80788

### ENHANCED VISIBILITY BY REGULAR MOTION OF RETINAL IMAGES

Floris L. Van Nes (Utrecht U. Dept. of Med. and Physiol. Physics, The Netherlands)

*American Journal of Psychology*, vol. 81, Sep. 1968, p. 367-374, 18 refs.

N. V. Philips Gloeilampenfabrieken and Netherlands Organ for Advan. of Pure Res. (Z.W.O.) supported research.

The results of an investigation of spatiotemporal modulation-transfer in the human eye showed that the contrast-sensitivity for slowly moving sine-wave gratings of low spatial frequency at retinal illuminances over 10 td was higher than for stationary gratings under the same conditions. This effect was conveniently and quantitatively expressible as a visibility-improvement factor. Previous research on the visibility of moving objects was discussed in view of this data.

## A69-80789

### THRESHOLD AND RESPONSE-LATENCY AS A FUNCTION OF THE RISE-TIME OF A C ELECTRICAL STIMULI

Thomas G. Sticht (The George Washington U. Human Resources Res. Office, Washington, D. C.)

*American Journal of Psychology*, vol. 81, Sep. 1968, p. 384-390, 13 refs.

Threshold (RL) and reaction-time (RT) measurements were obtained from two groups of subjects using electrocutaneous stimuli having rise-times of < one to 750 msec. The results indicate that increasing the rise-time to 50 msec produces a slight increase in RL but that the RL is constant for stimuli with longer rise-times. RT increases by an amount equal to the rise-time when the latter is greater than 50 msec.

## A69-80790

### EFFECTS OF D-AMPHETAMINE ON TASK-ALTERNATION AND UTILITY OF DELAYED REWARD

Paul M. Hurst, Robert Radlow, and Marianna F. Weidner (Inst. for Res., State College, Pa.)

*American Journal of Psychology*, vol. 81, Sep. 1968, p. 391-397, 5 refs.

Grant PHS MH-11294

Ninety college-student volunteers served as their own controls to test selected behavioral dimensions of d-amphetamine at two dosage-levels. Two hypotheses advanced to explain the drug's

apparent effect on industriousness were tested according to overt behavioral criteria. The first hypothesis was that an anti-inhibition mechanism is involved. From this hypothesis was derived the prediction that the drug would produce less frequent alternation between two different repetitive tasks than the placebo. This was confirmed at  $p < .02$  for the smaller dosage and at  $p < .001$  for the larger dosage. The second hypothesis was that d-amphetamine reduces the disutility of delay in reward and thus flattens the goal-gradient. This was tested by offering subjects various delayed-payment options concerning their remuneration for the experiment. It was predicted that the drug would increase the acceptance of lower-interest options. The second hypothesis was not confirmed although measurement-precision was too low for a conclusive test.

## A69-80791

### STIMULUS-RANGE, NUMBER OF CATEGORIES, AND FORM OF THE CATEGORY-SCALE

Lawrence E. Marks (John B. Pierce Found. Lab. and Yale U., New Haven, Conn.)

*American Journal of Psychology*, vol. 81, Dec. 1968, p. 467-479, 31 refs.

Contract AFOSR F44620-67-C-0017

Nine category-scales were measured for brightness as a function of luminance. Their form varied with the stimulus-range and with the number of available categories. When adjusted by means of an additive constant, the category-scales can be described as power functions of stimulus-intensity. Their exponents are smaller than the exponent obtained by ratio-scaling procedures. The size of the exponent of the power function can serve as an index of how the stimulus-range and the number of categories affect the form of the category-scale. The power function is also able to describe other category-scales that have been reported for a variety of perceptual continua.

## A69-80792

### DISCRIMINATION OF REPEATED AUDITORY PATTERNS OF PULSED DOPPLER SEQUENCES

Irwin Pollack (Mich. U. Mental Health Res. Inst., Ann Arbor)

*American Journal of Psychology*, vol. 81, Dec. 1968, p. 480-487, 11 refs.

Grant NSF GB-6148

Auditory Doppler pulse-trains were constructed so that successive interpulse intervals within a nonrepeated pattern either increased or decreased in duration. Doppler thresholds for the departure from uniform interpulse intervals were obtained as a function of the average interpulse interval, the temporal uncertainty or jitter, the number of intervals in a nonrepeated pattern of intervals, and the number of repeated presentations of the pattern. For a fixed total number of intervals or for a fixed pattern-length, Doppler thresholds increased, i.e., discrimination became poorer as the number of successive repetitions of the pattern was increased. This unexpected result is consistent with the demonstration of a previous investigator that introduction of symmetry to random-dot visual patterns hinders their recall.

## A69-80793

### VISUAL HORIZONTAL-PERCEPTION IN RELATION TO OTOLITH-FUNCTION

Earl F Miller II Alfred R Fregly, and Ashton Graybiel (Naval Aerospace Med Inst Pensacola Fla)  
*American Journal of Psychology* vol 81 Dec 1968 p 488-496  
 17 refs

NASA supported research

To determine the influence of the otolith-organs on visually perceived direction of space the constant and variable errors of normal persons and of deaf persons with bilateral labyrinthine defects were compared for 19 positions of body-tilt within  $\pm 90^\circ$  of gravitational vertical. The general perceptual pattern was similar for the two groups although that of the labyrinthine-defective group was found to be more variable and to reveal greater E and A effects in several of the tilt-positions. The significantly larger E effect occurred even though these labyrinthine-defective subjects manifested little or no ocular counterroll.

#### A69-80794

##### AUTOKINESIS AND FELT EYE-POSITION

Stephen Jordan (Naval Training Device Center Port Washington, N Y)

*American Journal of Psychology*, vol 81, Dec 1968 p 497-512  
 10 refs

The relationship between perceived eye-position and autokinesis was investigated in a series of experiments. Systematic changes in what was called the registered or more simply, the felt position of the eyes were found to accompany autokinesis. Specifically it was found that a subject asked to look straight ahead tended to look in a direction opposite to the direction of autokinetic movement. Since this shift in felt eye-position was found not only during and after but prior to autokinesis it was concluded that a shift in felt eye-position was a sufficient condition for the perception of autokinetic movement. A theory was proposed to account for the shift in felt eye-position. The basic assumption was that the eye-position felt to be straight ahead coincides with the center of incoming or afferent stimulation impinging on the eye. In the darkness internal sources of asymmetrical stimulation, such as those due to eye-dominance were assumed sufficient to shift the egocentric coordinates of visual space resulting in the apparent displacement of a geographically fixed light.

#### A69-80795

##### SYMMETRY OF LETTERS AS A FACTOR IN TACHISTOSCOPIC RECOGNITION

M P Bryden (Waterloo U, Ontario Canada)

*American Journal of Psychology*, vol 81 Dec 1968 p 513-524  
 17 refs

Grant NRC APA-95

Three experiments are reported in two rows of six letters were exposed tachistoscopically in the other, letters were presented singly. The results show that asymmetric letters are more readily identified than bilaterally symmetric ones when presented in groups but not when presented singly. This effect decreased when the spacing between the letters increased. The results indicate that asymmetric letters are less subject to spatial masking than symmetric letters, perhaps because they contain more information about spatial location.

#### A69-80796

##### CEREBRAL DYSFUNCTION AND FLICKER-DETECTION THE ROLE OF LOCAL ADAPTATION

Oscar A Parsons, Julian Burn, and Peter J Chandler (Okla, U Med Center Norman)

*American Journal of Psychology*, vol 81 Dec 1968 p 525-534  
 21 refs

Grant PHS B-2507

Recent evidence on central efferent control of receptor-activity raises the question whether altered retinal functioning is a determinant of nonspecific deficits in flicker-detection throughout the visual fields of brain-damaged subjects. To investigate this and other questions thresholds for flicker before and after stimulation by a coarsely flickering light were obtained at the 30° temporal point for both eyes in 16 brain-damaged subjects and 16 controls. Through a comparison of ipsilateral and homonymous stimulation, it was possible to assess central and peripheral components of the local adaptation response to stimulation. Despite highly significant differences in flicker-thresholds between brain-damaged and control groups and despite a significant effect of the adapting stimulation none of the interactions involving groups was significant. Nor were the curves for recovery from adaptation from three to nine sec significantly different for the two groups. It was concluded that altered retinal states cannot account for nonspecific deficits in flicker in the brain-damaged and that local adaptation is largely a retinal, as opposed to central phenomenon.

#### A69-80797

##### SELECTIVITY IN PROBLEM-SOLVING

Alison C Campbell (Manchester U, Dept of Social and Prevent Med Great Britain)

*American Journal of Psychology*, vol 81 Dec 1968, p 543-550  
 8 refs

Eight students were presented with code-items incorporating supraminimal data both relevant and not relevant to item-solution. The subjects tested were not particularly adept at separating data relevant to the solution of a problem from data not relevant to solution. Nor were the subjects particularly adept at separating data relevant and necessary to problem-solution from data relevant but superfluous. Hence supraminimal data other things being equal were found significantly to impede solution of the items. This was equally true both for supraminimal data relevant to solution and for supraminimal data not relevant to solution. The more data present whether relevant or not the more complex the item as a perceptual display. The subjects then took longer to select an appropriate starting point. The absolute amount of data however was crucial only when the probability of starting out on a wrong path was held constant. An item with supraminimal data but without false leads was in fact less difficult on the whole (i.e. took less time to solve) than an item without supraminimal data but with numerous false leads. The greater the number of false leads (initially plausible starting points) the greater the probability of starting out on a wrong path and hence the more difficult the item. This was true however only in group terms. The items were such that a fortuitous factor of initial choice could lead to rapid success. Hence an individual even on an item with an inordinate number of initially plausible starting points could by chance choose the correct starting point straight off. The present research dealt with only one type of problem-situation albeit in some detail. It may be concluded that the findings of the present study in relation to amount and kind of data and the presence of false leads threw at least some light on some general aspects of problem-situations that pose difficulties to the problem-solver.

#### A69-80798

##### SPATIAL MODELS AND MULTIDIMENSIONAL SCALING OF RANDOM SHAPES

**A69-80799**

Hoben Thomas (Pa State U, University Park)  
*American Journal of Psychology*, vol 81, Dec 1968 p 551-558  
19 refs

Eighth-grade children (N = 232) and college adults (N = 218) made similarity judgments to 20 random shapes varying in complexity. The judgments were scaled using Kruskal's nonmetric scaling procedure. For both groups the data fit a Euclidean solution as well as or better than various Minkowski metrics, for varying numbers of dimensions. In particular the data most poorly fit the city-block metric. Results indicated the data can be accounted for in either a one- or two-dimensional space. The first dimension was labeled complexity, the second dimension was tentatively labeled symmetry.

**A69-80799**  
**MINIMAL AVERSION-THRESHOLDS FOR BRIGHTNESS AFTER LIGHT- AND DARK-ADAPTATION**

Richard Sullivan (N Y U, Med Center New York)  
*American Journal of Psychology*, vol 81 Dec 1968 p 581-585  
7 refs

A minimal aversion-threshold (MAT) was obtained for high levels of brightness under differing conditions of adaptation. A large bright target was presented continuously in both ascending and descending trials, and subjects judged when the white light was minimally aversive, annoying or bothersome. The range of brightness in both conditions was 93.9 to 110 db re  $10^{-7}$  m. Lam. MAT differed for the dark- and light-adapted conditions. The MAT following light-adaptation was below the bleaching light's intensity for 16 of the 20 subjects, which suggests that there is a limit to the effect of adaptation on the MAT as the adapting stimulus increases in intensity. The findings suggest that the MAT concept may be useful for dividing intensive sensory continua into aversive and nonaversive ranges of stimulation.

**A69-80800**  
**DIRECTION OF THE SIGHTING LINE FOR DIFFERENT ACCOMMODATIVE RESPONSES**

Sidney Wittenberg and William M Ludlam (N Y Optometric Center New York)  
*American Journal of Optometry and Archives of American Academy of Optometry*, vol 46 Jan 1969 p 15-24 6 refs  
*Am Acad of Optometry, Ann Meeting, Denver, Dec 12, 1966*  
Grant PHS NB04806-03-04

The sighting line is the only reference axis of the eye that can be experimentally assessed simultaneously with respect to the visual system and its orientation in space. It is different from other axes such as visual axis, line of sight, and fixation axis, which are defined for reference points which cannot be readily measured. This experiment was designed to determine if the direction of the sighting line is invariant in the presence of accommodative changes. In the apparatus used, two objects could be placed along the subject's sighting line, providing an approximately 2.00 D difference in accommodative stimulus. The mean change in the direction of the sighting line for six subjects was found to be of the order of 2° in the horizontal meridian and 1° in the vertical meridian, and the maximum deviation observed was approximately 4-1/2°. In this sample taken as a whole, no systematic shift in direction of the sighting line was observed.

**PATHOGENESIS AND REVERSIBILITY OF THE PULMONARY LESIONS OF OXYGEN TOXICITY IN MONKEYS 1. CLINICAL AND LIGHT MICROSCOPIC STUDIES**

H P Kaplan, F R Robinson (Aerospace Med Res Labs, Wright-Patterson AFB, Ohio), Y Kapançi (Geneva, U Inst of Pathol, Switzerland) and E R Weibel (Berne, U, Inst of Anat, Switzerland)  
*Laboratory Investigation*, vol 20 Jan 1969 p 94-100 18 refs  
Contract AF 61(052)-941

Eighteen monkeys (*Macaca mulatta*) were used in studying the effects of continuous exposure to pure oxygen at 750 mm Hg total pressure for 2, 4, 7, and 12 days. Many appeared seriously ill between the third and eighth days of exposure, with dyspnea, cyanosis, lethargy, and almost total abstinence from food and drink. Nearly one-half of the monkeys died during this time. Some monkeys tolerated the exposure much better, with milder clinical symptoms. Survivors showed marked clinical improvement with continued exposure and appeared overtly normal by the 12th day unless suddenly removed from the hyperoxic environment to ambient air. Pathologic examination of lungs from these animals revealed acute exudative changes associated with the interval of severe debility and resolution of exudate and progression to hypertrophic and proliferative changes during the period of improvement. Examination of the lungs from two monkeys removed from exposure and allowed to recover from the hyperoxic environment, one after eight days of exposure and the other after 13 days, revealed that after a two- to three-month return to ambient air, there was complete clinical and overt functional recovery. Examination of lungs from these animals revealed that interruption of exposure after the onset of proliferative changes left residual scarring. The relative significance of these data to reports of respirator-lung syndrome in human patients is cited.

**A69-80802**  
**PATHOGENESIS AND REVERSIBILITY OF THE PULMONARY LESIONS OF OXYGEN TOXICITY IN MONKEYS 2. ULTRASTRUCTURAL AND MORPHOMETRIC STUDIES**

Y Kapançi (Geneva, U Inst of Pathol, Switzerland), E R Weibel (Berne, U Inst of Anat, Switzerland), H P Kaplan, and F R Robinson (Aerospace Med Res Labs, Wright-Patterson AFB, Ohio)  
*Laboratory Investigation*, vol 20, Jan 1969 p 101-118 65 refs  
Contract AF 61(052)-941 and Schweiz Nationalfonds supported research

Breathing pure oxygen at one atmosphere pressure causes significant damage to respiratory tissue of monkeys. Alveolar lining epithelium is almost completely destroyed after four days. The air-blood tissue barrier becomes progressively thickened, particularly in the phase of proliferative reaction which appears after seven days of exposure to pure oxygen. The endothelium seems to constitute the target tissue in the early reaction to oxygen toxicity. The mechanism of endothelial involvement is not clearly understood but appears to start with inconspicuous changes at the intercellular junctions after two days of exposure. After seven days of exposure, the destruction of endothelial cells produces a 50% decrease in their total volume. On the 12th day, this volume is one-third that of the control values. The finding of interstitial hemorrhage and other morphologic manifestations indicates a capillary destruction which has been clearly demonstrated in rat lungs exposed to pure oxygen. Recovery in room air for 56 and 84 days preceded by 8 and 13 days of exposure, respectively, allows substantial structural recuperation. Because of the increase of interstitial tissue associated with the formation of septal scars, the air-blood tissue barrier remains thickened after 13 days of exposure followed by 84 days of recovery. However, the concurrent increase in capillary surface area assures satisfactory conditions for gas exchange and thus allows total functional recuperation. At this time, the

diffusing capacity of the air-blood barrier as calculated from the morphometric data is practically normal

**A69-80803****CONTINUOUS MEASUREMENTS OF ARTERIAL FLOW IN MAN DURING ATRIAL AND VENTRICULAR ARRHYTHMIAS**

A Benchimol Peter Maroko Jack Gartland (Good Samaritan Hosp Inst of Cardiovascular Diseases Phoenix Ariz), and Dean Franklin (Scripps Clin and Res Found La Jolla Calif)  
*American Journal of Medicine*, vol 46 Jan 1969 p 52-63 20 refs  
NASA Grant NGR-05042 and Grant NIH HE 11131-01, Ariz Heart Assn and Southwest Found for Med Res and Educ supported research

Measurements of arterial flow using the transcutaneous or implanted technic with the Doppler shift ultrasonic telemetry system was studied in 190 patients Fifty were normal subjects and 140 had diseased hearts All had some form of arterial or ventricular arrhythmia during the study The phenomenon of post-extrasystolic augmentation occurred with both arterial and ventricular extrasystoles (greater for ventricular extrasystoles) and was dependent chiefly on the timing of the extrasystole Atrial and ventricular tachycardia resulted in a decrease in peripheral arterial flow which occurred only at rapid rates above 140 to 160 per minute The contribution of atrial contraction to the peripheral arterial flow was not as great as expected In patients in whom restoration of regular sinus rhythm resulted in greater peak flow velocity this was of the magnitude of 10 percent or less

**A69-80804****INFLUENCE OF ACCOMMODATION ON THE VIEWING OF AN OPTICAL ILLUSION**

Michel Millodot (Brown U Hunter Lab of Psychol Providence R I)  
*Quarterly Journal of Experimental Psychology* vol 20, Nov 1968 p 329-335 15 refs

This study demonstrates the role of microfluctuations of accommodation in the viewing of the concentric ring illusion Four experiments were carried out Experiment I consisted of changing the distance between the illusion and the eyes but retaining visual angle luminance and pupil size constant In Experiment II, the accommodation of the eyes is paralysed by a cycloplegic In Experiment III the illusion is shown to a monocular aphakic and in Experiment IV the exposure time is varied between 1/100 and five sec Furthermore, a series of observations compared the concentric ring illusion seen with both eyes simultaneously The evidence provided by the results of these experiments plus others discussed provide evidence that the concentric ring illusion is caused by the microfluctuations of accommodation

**A69-80805****DISTRACTION AND TIME ESTIMATION**

Guy von Sturmer, Tong Wong, and Max Coltheart (Monash U Dept of Psychol Victoria Australia)  
*Quarterly Journal of Experimental Psychology*, vol 20 Nov 1968, p 380-384 13 refs

It is argued that events which occur during an interval of time which is being judged may be classified in terms of their effects on the alertness of the subject, and in terms of the degree to which they distract him from the task of detecting and processing time-relevant cues A distracting task, defined by the number of arithmetical operations a subject was required to perform was

presented while reproductions of an interval were being made The data support the prediction that the higher the level of distraction, the less time a subject will judge to have elapsed during an objective period

**A69-80806****THE EFFECT OF ACUTE HYPOXIA AND HYPERCAPNIA ON THE ULTRASTRUCTURE OF THE CENTRAL NERVOUS SYSTEM**

L Bakay and J C Lee (N Y, State U Div of Neurosurg, Buffalo)  
*Braim* vol 91 part 4 Dec 1968 p 697-706 27 refs  
Grant PHS NB 03754-06

The effect of acute hypoventilation hypoxia with normal CO<sub>2</sub> elimination and hypercapnia produced by the inhalation of 25 per cent CO<sub>2</sub> on the fine structure of the central nervous system of cats was studied by electron microscopy Significant increase in tissue water occurred in hypercapnic hypoxia and to a lesser degree in hypercapnia In both instances the edema was mostly limited to the white matter The ultrastructural changes were most pronounced in hypercapnic hypoxia in direct proportion to the degree of O<sub>2</sub> deprivation and acidosis They consisted of a marked swelling of the astrocytic processes and relatively mild expansion of the extracellular space in the white matter The changes were much less severe in hypercapnia There was no measurable edema in brains under hypoxia with normal CO<sub>2</sub> elimination except for a minimal swelling in the pericapillary astrocytic processes However there was evidence of increased secretory activity in the choroid plexus under all three conditions Swelling of mitochondria with dissolution of the cristae occurred in hypoxia more frequently than in hypercapnic hypoxia or hypercapnia Mitochondrial damage was limited to oligodendrocytes and some neurons and did not involve astrocytes indicating a difference in enzyme systems and vulnerability of mitochondria to anoxia among various cell types The axons and myelin sheaths remained normal in all conditions

**A69-80807****STIMULUS GENERALIZATION OF GRAVITY**

D F McCoy and K O Lange (Ky U, Lexington)  
*Journal of the Experimental Analysis of Behavior*, vol 12, Jan 1969, p 111-118 11 refs  
NASA Grant NsG-456

In two experiments squirrel monkeys were exposed to centrifugally generated artificial gravity and trained to respond for food reinforcement at selected gravity (g) levels Experiment I involved a single g value, in Exp II subjects were trained to discriminate among two or three g values After training, generalization tests were administered over a 1.1-g to 2.1-g range The major findings were as follows (a) single-stimulus training yielded a linear relationship between percentage of responding and magnitude of gravity (b) Two-valued discrimination training produced gradient peaks which were shifted from S<sup>D</sup> in a direction away from S<sup>Δ</sup> This effect was cancelled when S<sup>D</sup> was located equidistant between two S<sup>Δ</sup> stimuli (c) Gradient form was independent of the S<sup>D</sup>-S<sup>Δ</sup> difference, but related to continuum location and/or intensity of discriminative stimuli

**A69-80808****PERIODIC SHOCK WITH ADDED CLOCK**

## A69-80809

Derek P Hendry Matthew Yarczower and Richard C Switalski (Md U College Park and Ill U Chicago Circle)  
*Journal of the Experimental Analysis of Behavior* vol 12 Jan 1969 p 159-166 26 refs  
*Eastern Psychol Assn Conf New York 1966*  
NASA Grant NsG 189-61 Grants NIH MH 08819 and NIH GM 14221

Rats were shocked every six min while responding was maintained on a variable-interval schedule of reinforcement. With some rats shocks were interspersed with a sequence of three different stimulus conditions (S3→S2→S1) or clock cues each lasting two min. For other rats a single stimulus condition prevailed between shocks at the beginning of the experiment and clock cues were introduced later. Response rate decreased from S3 to S1. Response rate in S3, S2 and S1 was inversely related to shock intensity. When clock cues were added response rate increased in all two-min intershock periods. During clock cues, an index of curvature, indicating the degree of negative acceleration of response rate, was greatest for S1 and least for S3 and was directly related to shock intensity. The response-facilitating effect of shock and its relation to a possible discriminative function of shock and to behavioral contrast is discussed.

**CONDITIONED CARDIAC REFLEXES AND THE FUNCTIONAL AND MORPHOLOGICAL STATE OF THE CORTICAL NEURONS UNDER THE ACTION OF ELECTROMAGNETIC FIELDS OF SUPERHIGH FREQUENCIES [K VOPROSU OB USLOVNYKH SERDECHNYKH REFLEKSAKH, FUNKSIONAL'NOM I MORFOLOGICHESKOM SOSTOIANII KORKOVYKH NEIRONOV PRI DEISTVII ELEKTROMAGNITNYKH POLEI SVERKHVYSOKIKH CHASTOT]**

M I Iakovleva T P Shliafer and I P Tsvetkova (USSR Acad of Med Sci Inst of Exptl Med Leningrad)  
*Zhurnal Vysshei Nervnoi Deiatel nosti*, vol 18 Nov-Dec 1968, p 973-978 19 refs In Russian

A study was made of cardiac conditioned reflexes in rats and of bioelectrical activity and histological structure of their cortical cells after the action of superhigh-frequency electromagnetic fields. Single and repeated actions of superhigh-frequency fields with PPM equal to 5-15 mw/cm<sup>2</sup> lead to a reduction of excitability and functional mobility of the cortical cells. Histologically edemic changes were observed in the nerve cells throughout the cross-section of the cortex. The greatest number of changed cells were recorded after repeated actions of superhigh-frequency fields. The changes in the functions and structure of the cerebral cortex units precede disturbances of conditioned control of heart activity.

**EVOKED RESPONSES TO SOUNDS OF DIFFERENT DIRECTION IN THE AUDITORY CORTEX OF THE CAT. 2. QUANTITATIVE CHARACTERISTICS [VYZANNIE OTVETY V SLUKHOVOI KORE KOSHKI NA ZVUKI RAZNOGO NAPRAVLENIIA SOOBSHCHENIE 2 KOLICHESTVENNYE KHARAKTERISTIKI]**

N I U Alekseenko and I P Levshina (USSR Acad of Sci, Inst of Higher Nervous Activity and Neurophysiol Lab of Analytic Physiol Moscow)  
*Zhurnal Vysshei Nervnoi Deiatel nosti*, vol 18 Nov-Dec 1968 p 1001-1008 15 refs In Russian

The dependency of the parameters of evoked potentials (EP) upon the side of the monaural acoustic stimulation (clicks) was

studied in the primary auditory area AI and in the associative zone (the middle suprasylvian gyrus) of the anesthetized cats. Along with differences in the form of responses previously described quantitative differences between EP to contra- and ipsilateral stimuli were found in both areas of the cortex. In responses to the stimulation of the contralateral ear latencies of different EP phases and the duration of their positive phase are shorter, the amplitude greater and the thresholds of emergence of their individual components lower than in the responses to ipsilateral stimuli of the same suprathreshold intensity. Such differences in EP parameters testify in the case of contralateral stimulation to a higher excitability of the elements taking part in its formation, to the participation of a greater number of them in the reaction and to their earlier and more synchronous involvement. It may be assumed that such differences being superimposed on the binaural effect enhance it and may thus contribute to sound localization.

## A69-80811

**DEPENDENCE OF THE PARAMETERS OF EVOKED POTENTIALS IN HUMAN BRAIN ON THE STATE OF ATTENTION [O ZAVISIMOSTI PARAMETROV VYZVANNOGO POTENTIALA MOZGA CHELOVEKA OT SOSTOIANIIA VNIMANIA]**

M P Kudinova and M S Myslobodskii (USSR Acad of Sci Inst of Higher Nervous Activity and Neurophysiol Moscow)  
*Zhurnal Vysshei Nervnoi Deiatel nosti*, vol 18 Nov-Dec 1968 p 1027-1034 38 refs In Russian

A description is given of changes in the average human evoked potential to light (recorded frominion with reference electrode placed on the mamilliform process) during sleep and a change state of attention. Sleep increases the amplitude and duration of mainly the second and fourth positive wave of response and the sensory after-discharge is replaced by a slow negative wave. Attraction and distraction of attention changes the amplitude of individual waves of the response to light in a different direction. The nature of such changes and indicational possibilities of the method are discussed.

**DYNAMICS OF ELECTRORETINOGRAM B-WAVE IN CATS UNDER RHYTHMIC PHOTIC STIMULATION [DINAMIKA IZMENENIIA B-VOLNY ELEKTRORETINOGRAMMY KOSHKI PRI RITMICHESKOM SVETOVOM RAZDRAZHENII]**

V F Fokin (USSR Acad of Med Sci, Brain Inst Lab of Neurocybernetics Moscow)  
*Zhurnal Vysshei Nervnoi Deiatel nosti*, vol 18 Nov-Dec 1968 p 1035-1043 21 refs In Russian

In experiments on cats anesthetized with nembotal a study was made of the dynamics of the (IERG) intraelectroretinogram b-wave to a rhythmic photic stimulation of the central and peripheral areas of the retina under conditions of dark and light adaptations as well as the connection of the b-wave with slow changes in the steady potential of the retina observed during stimulation. The amplitude of the rhythmic IERG b-wave during dark adaptation exponentially diminished as the flashes frequency increases. The difference between the central and peripheral areas were slight and manifested itself mainly in the range of from one to six c/p/s. In this range the significance of the difference between the mean b-wave amplitude in the center and the periphery was not lower than 0.95. During light adaption the b-waves of the rhythmic IERG in the center and the periphery of the retina increased at a flash frequency of two to 10 c/p/s as compared with the response to a single stimulus at higher frequencies there was a subsequent

exponential diminution of amplitude. The differences found between the mean b-wave amplitudes in the center and the periphery of the retina were statistically non-significant.

**FUNCTIONAL CHANGES IN THE CARDIOVASCULAR SYSTEM OF YOUNG ATHLETES DURING TRAINING IN DRY HOT ENVIRONMENTS [FUNKSIONAL'NYE IZMENENIYA SERDECHNO-SOSUDISTOI SISTEMY U IUNYKH LEGKOATLETOV V PROTSESE TRENIROVKI V USLOVIYAKH SUKHOGO ZHARKOGO KLIMATA]**

M K Kurbanmamedov

*Teoriya i Praktika Fizicheskoi Kul'tury*, no 3 Mar 1968, p 41-42  
In Russian

The response of the cardiovascular system to hot, dry environments was studied in two groups of young (17 to 18 yr old) native inhabitants of Ashkhabad Turmenia USSR, during the summer (June-Aug). One group was composed of 60 well-trained athletes, the other of 25 beginners. Electrocardiograms were made while the peripheral blood circulation was recorded by oscillography and the skin temperature by electrothermometry. The measurements were recorded at rest and in the postexercise period. The findings showed a lower heart rate, arterial pressure, and skin temperature, a relatively decreased vascular tonus and higher pulse pressure in the trained subjects in comparison with the untrained. The favorable adaptation of the well-trained young athletes to physical exertion in high temperature environments would encourage the systematic practice of moderate athletics for a better cardiovascular stability and higher levels of adaptation in the thermoregulatory processes.

**EFFECT OF PHYSICAL WORK LOAD ON THE ACTIVITY OF BLOOD CHOLINESTERASE IN SKIERS [VLIYANIE FIZICHESKOI NAGRUZKI NA AKTIVNOST' KHOLINESTERAZY KROVI U LYZHNIKOV]**

I D Kostiumin

*Teoriya i Praktika Fizicheskoi Kul'tury*, no 3, Mar 1968 p 42-44  
In Russian

The content of true and pseudocholinesterase in the blood was studied in 23 trained skiers and 27 beginners who exercised on a bicycle ergometer for 15 min at a work rate of 4,000 kgm/min. Blood samples were taken before and after exercise. It was concluded from the findings that the variation of the cholinesterase activity in the skiers' blood in relation to the workload followed an undulating pathway. The initial increase of the pseudocholinesterase and the decrease in the true cholinesterase changed to a decrease of the pseudocholinesterase and increase of the true. Later with the development of fatigue both the true and pseudocholinesterase increased. The variations of the cholinesterase activity were related to the amount of physical work performed and the degree of fitness of the athlete. The magnitude of the variations in the activity and the correlation between true and pseudocholinesterase and the workload were clearly correlated with the athletic achievements of the subjects investigated, and could be as a reliable criterion of the physical fitness.

**DURATION OF THE SPINAL COMPONENT AND MOTOR REACTION TIME IN MAN [DLITEL'NOST' SPINAL'NOI KOMPONENTY I VREMIA DVIGATEL'NOI REAKTSII Y CHELOVEKA]**

V A Mart'yanov

*Teoriya i Praktika Fizicheskoi Kul'tury*, no 3 Mar 1968 p 45-50  
12 refs. In Russian

With the help of the monosynaptic N-reflex, the duration of the latent period of the motor reaction was determined in man with various changes in the reaction time such as natural variability in the repeated execution of the movement, individual differences in different subjects, reduction during the training process, decrease with the change from the light signal to the skin electric stimulation, and enhancement to the signal by selection. The time of the spinal component of the motor reaction was found to be 55-60 msec, and to remain constant irrespective of the changes in the motor reaction latent period. The invariability of the motor reaction spinal time component indicated that the main role in the changes of speed of the motor reaction was played by the higher part of the central nervous system.

**CONDITIONING OF INSPIRED AIR IN THE UPPER RESPIRATORY WAYS [UPRAVA TEPLoty A VLHKOSTI VDECHOVANEHO VZDUCHU V HORNICH DYCHACICH CESTACH]**

I Pavfik

*Ceskoslovenská Otolaryngologie*, vol 17 Oct 1968 p 288-296  
9 refs. In Czech

The energy required for warming up and moistening air in the upper respiratory tract was calculated. It was concluded that under optimal conditions at 20°C and 60% relative humidity, the consumption of thermal energy amounted to about 20% basal metabolism. There are possibilities of thermotherapy of the mucosa of the upper respiratory tract by only warm and sufficiently moist air. The theoretical curve according to which the air should be heated was calculated and compared to experimentally obtained curves. Theoretical calculations were verified in a small group of subjects, and a method was submitted which would enable determination of the numeric characteristics of the functional efficiency of the nasal cavity. A new conception of the genesis of tracheobronchitis was also suggested.

**EXCITATION OF THE ELLIPSE PHENOMENON BY THE HARMONICS OF A RECTANGULAR STIMULATING CURRENT [ANREGUNG DES ELLIPSEPHANOMENS DURCH DIE HARMONISCHEN EINES RECHTECKFORMIGEN REIZSTROMES]**

E Welpé (Munich, Tech Hochschule Inst für Tech Elektronik West Germany)

*Pflügers Archiv European Journal of Physiology*, vol 305, Dec 12 1968 p 9-20 18 refs. In German

The paper deals with the ellipse phenomenon. It is perceived as a dark elliptic ring (seldom as a dark elliptic area) during periodical electrical stimulation of the eye and simultaneous watching of a bright surface. It is proved that the ellipse phenomenon at stimulation with rectangular (and other nonsinusoidal) currents is released by the harmonics of the stimulating current. The frequency range, where the ellipse phenomenon is excited by sinusoidal currents (at amplitudes of the stimulating current, which do not lie over the threshold for more than a factor of six to nine) is 81 to 104 cps.

**THE HEMODYNAMIC EFFECTS OF CHANGES IN BLOOD VOLUME DURING INTERMITTENT POSITIVE-PRESSURE VENTILATION**

## A69-80819

Beverly C Morgan Edward W Crawford and Warren G Guntheroth (Wash U School of Med, Seattle)  
*Anesthesiology*, vol 30, Mar 1969, p 297-305 18 refs  
Grant PHS HE 7945 and Life Insurance Med Res Fund supported research

The hemodynamic effects of changes in blood volume during intermittent positive-pressure ventilation (IPPV) were studied in lightly anesthetized dogs following recovery from implantation of pulsed ultrasonic flow transducers on vena cava and aorta. Alveolar ventilation was maintained in excess of normal and arterial carbon dioxide tension ( $P_{aCO_2}$ ) was varied by alteration of concentration of inspired  $CO_2$ . Blood volume was altered by the bleeding of 20% of estimated blood volume, following this by reinfusion of the shed blood plus an equal amount of dextran. During each of these periods low (peak airway pressure 10 cm  $H_2O$  inspiratory-to-expiratory ratio 1:2) and high (peak airway pressure 30 cm  $H_2O$  inspiratory-to-expiratory ratio 2:1) levels of ventilation were employed. The three variables, blood volume  $P_{aCO_2}$  and intrathoracic pressure exerted separate effects on stroke volume (SV) and cardiac output (CO). CO and SV increased with increasing blood volume and with rising  $P_{aCO_2}$  but decreased with increasing intrathoracic pressure. These findings suggest that the deleterious effects of high levels of intrathoracic pressure on cardiac output may be compensated by expanding blood volume.

### PROTECTION AGAINST IONIZING RADIATION AT THE CELLULAR LEVEL, ASSESSED BY VARIOUS PARAMETERS

O Vos and M C A C Kaalen (Natl Defence Res Organ TNO, Med Biol Lab Rijswijk (Z H) The Netherlands)  
*International Journal of Radiation Biology*, vol 14, no 2, 1968, p 107-118 21 refs

The radioprotective effects of cysteamine glycerol and dimethyl sulphoxide were investigated at the cellular level. The incidence of anaphase bridges occurring at one hr after irradiation and the length of mitotic delay served as criteria for radiation damage. The data were compared with those on protection against radiation-induced loss of reproductive integrity obtained in previously published experiments. It was shown that the protection assessed by any of the three parameters was of the same magnitude. This similarity in response to protection suggests a similarity in the nature of the lesions involved. Damage to the cell membrane as shown by leakage of hemoglobin and potassium from rat erythrocytes indicated a different protective capacity of the three compounds. This was most evident with dimethyl sulphoxide which protected as judged by the three criteria mentioned in the first paragraph but sensitized with regard to membrane permeability. Since radiation-induced mortality of animals is mostly due to a loss of the reproductive integrity of certain stem cells the value of chemicals with regard to the protection of whole animals cannot be assessed on account of their effectiveness in protecting cell membrane.

### RADIATION SENSITIVITY OF DROSOPHILA EMBRYOS IN RELATION TO AGE, IN AIR AND IN NITROGEN

Edel Havin and Per Oftedal (Norweg Radium Hosp Norsk Hydros Inst for Cancer Res Oslo Norway)  
*International Journal of Radiation Biology*, vol 14, no 2 1968 p 149-160 21 refs  
Norweg Cancer Soc and Norweg Res Council for Sci and Humanities supported research

The sensitivity of *Drosophila* embryos to X-rays was investigated for ages between one hr and three and one-half hr. The highest sensitivity was found in embryos about one and

one-half hr old ( $LD_{50}$  about 180 r) the lowest in embryos two and three-fourths hr old ( $LD_{50}$  about 1700 r). The oxygen enhancement ratio was found to be the same for these two ages, about two.

## A69-80821

### SLEEP AND WAKEFULNESS IN A GROUP OF SHIFT WORKERS

G S Tune (MRC Liverpool U, Unit for Res on Occupational Aspects of Ageing Great Britain)

*British Journal of Industrial Medicine*, vol 26, Jan 1969 p 54-58 15 refs

Fifty-two shift workers recorded their hours of sleep and wakefulness for a period of 10 wk. Compared with matched non-shift-working control subjects it was found that they took a higher average duration of sleep per 24 hr and more and longer naps outside the major sleep period. A comparison of the on and off duty records from the shift workers showed that a sleep debt was incurred during the former which was largely paid off by taking long naps in the latter. It is suggested that the longer sleep taken by shift workers may be necessary in order to pay off specific kinds of sleep debt.

## A69-80822

### PLASMA CORTICOSTERONE RESPONSE TO ENVIRONMENTAL STIMULATION EFFECTS OF DURATION OF STIMULATION AND THE 24-HOUR ADRENOCORTICAL RHYTHM

R Ader and S B Friedman (Rochester U School of Med and Dentistry, Depts of Psychiat and Pediat N Y)  
*Neuroendocrinology*, vol 3 no 6 1968 p 378-386 11 refs  
Grants PHS MH-03655, PHS K3-MH-6318, PHS MH-06352 and PHS K3-MG-18,542

Three experiments were conducted to determine the effects of the known 24 hr adrenocortical rhythm on the rat's plasma corticosterone response to different durations of environmental stimulation. In Experiment 1 plasma corticosterone was sampled from rats housed 10 per cage and sacrificed sequentially at the crest or trough in the adrenocortical cycle. Animals sacrificed at the crest in the daily cycle showed a rise of approximately 50% whereas there was a five-fold increase in corticosterone levels between the first and last animals sacrificed at the trough in the adrenocortical cycle. In Experiment 2, rats were sacrificed 15 min after five to 240 sec of stimulation that consisted in transferring an animal from its home cage to a different cage. Five sec of stimulation was sufficient to cause a significant elevation in corticosterone levels in animals sampled at the crest at the trough in the adrenocortical cycle. As in previous studies the relative increase in corticosterone levels was greater when the stimulation was superimposed upon the trough in the daily cycle. In Experiment 3, rats were sacrificed at the crest or trough in the adrenocortical cycle either 5, 15, 30 or 60 min following five sec or three min of stimulation. Significant interactive effects indicated that the time course of the plasma corticosterone response to environmental stimulation depends upon the duration of stimulation and the point in the 24 hr adrenocortical rhythm upon which the stimulation is superimposed. The results raised several questions concerning the definition of adrenocortical reactivity and the adaptive significance of the several parameters of the plasma corticosterone response to environmental stimulation.

### LUMINANCE REQUIREMENTS FOR HUE IDENTIFICATION IN SMALL TARGETS

Mary M Connors (NASA Ames Res Center Moffett Field, Calif)  
*Journal of the Optical Society of America*, vol 59, Jan 1969  
p 91-97 19 refs

Foveal luminance thresholds for identification of red (642 nm) yellow (584 nm) green (521 nm) and blue (468 nm) were determined by the method of constant stimuli for a range of small stimulus sizes and for two exposure durations. The luminances necessary for chromatic and absolute thresholds were also specified. The luminances necessary for chromatic and absolute thresholds were also specified. The luminance required for chromatic threshold was found to be lowest for the 642-nm stimulus and highest for the 468-nm stimulus. The threshold for correct hue identification was found to be inversely related to wavelength. The ratios of the luminance necessary for hue perception to the absolute threshold range from 1.14 for the 642-nm stimulus to 1.51 for the 584-nm stimulus. The ratio of the luminance required for correct hue identification to the absolute threshold ranged from 1.32 for the 642-nm stimulus to 3.33 for the 521-nm stimulus. More reliable responses and fewer confusion in the hue identification were associated with the 642-nm stimulus than with the other wavelengths. The identification thresholds of this study are compared with the detection thresholds for similar targets.

##### LATENCY VARIATION IN HUMAN PUPIL CONTRACTION DUE TO STIMULUS LUMINANCE AND/OR ADAPTATION LEVEL

Robert E Lee, Gerald H Cohen and Robert M Boynton (Rochester, U N Y)

*Journal of the Optical Society of America* vol 59 Jan 1969  
p 97-103 15 refs

Grants PHS NB-00624 and PHS 2G-540

The purpose of the experiment was to measure the latency to onset of the contraction of the pupil as a function of the size of positive steps in luminance starting at various luminance levels to which the eye has been adapted prior to the stimulus steps. In the past latency of the pupil response has been inaccurately measured owing to the difficulty of separating the end of the latent period from the slow beginning of contraction. To overcome this a digital curve-fitting technique involving a time delay followed by a modified second-order step response was developed. Latency was defined as the time delay given the most accurate fit. Because the curve-fitting procedure needed a response with less random variation than is normally present, an average was used. Such averaging was first justified by using the standard deviation to show that there is probably no significant variation of latency for responses for a given subject under identical stimulus conditions. This analysis also showed that 20 responses is an efficient number of average for the pupil-contraction system. The excellent agreement between each average experimental response and the computed fit verified the value of delay used in the computation. Latency thus defined for each stimulus condition was found to be primarily a function of luminance during the step and only secondarily of the ratio of the step change of luminance to the adaptation luminance.

#### A69-80825

##### EXCRETION OF 17-HYDROXYCORTICOSTEROIDS AND VANILLYLMANDELIC ACID DURING 205 HOURS OF SLEEP DEPRIVATION IN MAN

Robert T Rubin, Edward J Kollar, Grant G Slater and Brian R Clark (Navy Med Neuropsychiat Res Unit San Diego Calif and Calif U. School of Med Dept of Psychiat Los Angeles)

*Psychosomatic Medicine*, vol 31 Jan-Feb 1969 p 68-79 31 refs

*Am Psychosomat Soc, Ann Meeting Boston, Mar 29-31, 1968*  
Grant CDMH 66-2-40 4 and Navy Dept supported research

Previous studies of adrenocortical activity during sleep deprivation revealed unchanged or lowered plasma 17-hydroxycorticosteroid (17-OHCS) levels and either unchanged, lowered or elevated urine 17-OHCS values, depending on the subject and the length of the deprivation period. In the present study plasma 17-OHCS, urine 17-OHCS and urine vanillylmandelic acid (VMA) were measured during 205 hr of wakefulness. The rationale being that an extended period of sleep deprivation might result in more definitive physiological responses. Plasma 17-OHCS in all four subjects decreased to a low point at about 90 hr then increased to peak values at about 170 hr. Urine 17-OHCS values tended to reflect changes in plasma 17-OHCS levels. Urine VMA excretion varied considerably among the four subjects. The results suggest that prolonged sleep deprivation *per se* results in only mild, if any, specific activation of the pituitary-adrenocortical axis and in variable increases of catecholamine biosynthesis. Differing patterns of physiological activity may occur among sleep-deprived subjects.

#### A69-80826

##### LASER-INDUCED ACOUSTIC BREAKAGE OF TOBACCO MOSAIC VIRUS

E F Carome (John Carroll U Dept of Physics Cleveland Ohio)  
*Nature*, vol 221 Feb 15, 1969 p 660-661

A previous investigation was reviewed which reported alterations in biological systems produced by the intense acoustic transients that are generated when a Q-spoiled laser impulse is used to irradiate an optically absorbing material. The intention was to clear up confusion which may occur from the conclusion that the breakage of particles was found to depend on the surface boundary conditions of the irradiated medium. Only in one case was the sample subjected solely to positive pressure transients whereas in two other cases there would be reversal of phase on reflexion. It was reported that cavitation was not a contributing factor however that conclusion needs further study. The investigators pointed out that laser-induced acoustic transients may produce a wide spectrum of possible effects. The phenomenon is complicated and identification of the specific causes of some of the observed effects may be difficult.

#### A69-80827

##### ACUTE RESPIRATORY INFECTIONS IN AIRCREW UNDER TRAINING WITH SPECIAL REFERENCE TO INFLUENZA AND ADENOVIRUS INFECTIONS

A W McCracken (Tex., U., Med School, Dept of Pathol San Antonio) and J A Hopson (Min of Defense (Air), London Great Britain)

*Military Medicine* vol 134, Feb 1969 p 111-115 16 refs

Aircrews under training and their instructors who had respiratory infections during the periods November, 1965 to May 1966 and October 1966 to April 1967 were examined clinically and specimens cultured for evidence of influenza or adenovirus infection. Two instances of adenovirus type 2 were found during the 1965 to 1966 phase and no isolations of influenza viruses were obtained in either period. These largely negative findings, together with the clinical data, suggest that these two groups of viruses are not normally a major cause of respiratory disease in servicemen who have progressed recently beyond the recruit stage.

##### PROTECTION AGAINST IONIZING RADIATION 2 PROBLEMATIC AND RESPONSIBILITY [BESCHERMING

A69-80829

**TEGEN IONISERENDE STRALING (II) PROBLEMATIEK EN VERANTWOORDELJKHEID]**

H Galjaard and J W Thiessen

*Nederlands Militair Geneeskundig Tijdschrift* vol 21, May-Jun 1968 p 147-152 In Dutch

In this article on the problematics of the use of ionizing radiations in the armed forces the authors go into two other measures which could assist the commander in executing his responsibilities viz the drafting of guidelines concerning the protection against ionizing radiation and the establishment of an interservice radiological assistance team which could carry out inspections and give practical advice when this is needed

A69-80829

**MILITARY-MEDICAL EXAMINATION AND DISABILITY EVALUATIONS IN RELATION TO THE FUNCTION OF HEARING, PARTICULARLY CONCERNING NOISE INJURY OF THE AUDITORY ORGAN [MILITAIR-GENEESKUNDIGE KEURINGEN EN INVALIDITEITSSCHATTINGEN MET BETREKKING TOT LAWAAIBESCHADIGING VAN HET GEHOORORGAAN]**

H C Bodegraven

*Nederlands Militair Geneeskundig Tijdschrift* vol 21 May-Jun 1968 p 158-177 In Dutch

A description is given of some aspects of military-medical examination and disability evaluations in relation to the function of hearing particularly concerning noise injury In this respect the author goes further into the activities of a medical board examination of the military which makes use of the World Pension Committee (WPC) scale for the determination of the degree of disability due to military service, as a result of the reduction of the acuity of hearing Because of the slight differentiation given in the WPC scale more differentiated tables were developed by using graphic methods allowing determination of the disability rates from 0 to 90% in numbers of five according to law

A69-80830

**EXPERIMENTAL STUDIES ON THE EFFECT OF TRAINING ON HEAT TOLERANCE**

Kuhee Hirooka (Kobe U School of Med, Dept of Hyg Japan)

*Kobe Journal of Medical Sciences*, vol 14 Sep 1968 p 195-218 19 refs

After acclimatization determinations of heat tolerance in mice were made by measuring the lethal time of tested mice exposed to an environment with a temperature of 41° C The effect of heat acclimatization became greater with the rise of acclimatization temperature and exposure to 41° C for 30 min every day increased heat tolerance prominently The following tendencies were observed the effect of heat training is increased according to the duration of acclimatization, the acclimatization effect is already recognized after one hr, and it increases remarkably by 24 hr On the other hand heat acclimatization alone lowers cold tolerance and this tendency becomes greater with time

A69-80831

**DIFFERENTIAL OPERANT CONDITIONING OF HEART RATE**

Howard I Levene, Bernard T Engel and John A Pearson (Calif U San Francisco Med Center, Langley Porter Neuropsychiat Inst and Cardiovascular Res Inst San Francisco)

*Psychosomatic Medicine* vol 30 Nov-Dec 1968 p 837-845 8 refs

Grants PHS FR-00122 PHS 5TI-MH-7082 and PHS HE-06285

Five normal female subjects were taught to increase and decrease cyclically their heart rate (HR) by means of a differential operant conditioning technique Discrimination between slowing and speeding was easily demonstrated however the ability significantly to increase and decrease HR relative to resting rate was less apparent Although each subject could do this on at least one occasion only two subjects did so with consistency Breathing or musculoskeletal responses did not seem to mediate the learned responses

A69-80832

**CORTICAL SLOW POTENTIAL CHANGES IN MAN RELATED TO INTERSTIMULUS INTERVAL AND TO PRE-TRIAL PREDICTION OF INTERSTIMULUS INTERVAL**

Dale W McAdam John R Knott and Charles S Rebert (Iowa U, Dept of Psychiat Iowa City)

*Psychophysiology* vol 5 Jan 1969 p 349-358 13 refs

Two experiments were performed to explore further the relationship between the cortical slow potential change known as the contingent negative variation (CNV) and the concept of expectancy In Experiment I 24 male subjects were presented click pairs with inter-click intervals of 800 1600 and 4800 msec (two blocks of 10 trials each, counter-balanced between subjects for order) and instructed to press a key after the second click Interval by order by trials analysis of variance showed interval to be the only significant factor CNV were lower and reaction times (RT) longer as interval increased In Experiment II eight female subjects given 60 pairs of clicks 30 each with separations of 1200 and 2400 msec were instructed to respond as in Experiment I and were asked to make a pretrial prediction of the interval they would next receive Analysis of variance of RT showed that subjects responded slower when the interval was other than that predicted Prediction by reception by subjects analysis of variance of CNV amplitude at the 1200 msec point gave a significant F only for prediction mean amplitude for short being higher than for long A similar design applied to CNV amplitudes at both the 1200 and 2400 msec points when subjects received the long interval yielded a significant measurement point by interval prediction interaction at the 1200 msec point short predictions were followed by higher CNV than were long predictions at 2400 msec the opposite was found These data combine with those already in the literature to indicate that the relationship between expectancy and the CNV is far from simple and that cognitive and motivational factors play a significant role in determining CNV amplitude

A69-80833

**HEART RATE RESPONSE TO SOUND AND LIGHT**

Robert Roessler Forrest Collins and Neil R Burch (Baylor U Coll of Med, Dept of Psychiat Psychophysiol Lab and Tex Res Inst of Mental Sci Psychophysiol Div Houston)

*Psychophysiology*, vol 5 Jan 1969 p 359-369 26 refs

NASA Grant NGR 44-003-031 Grants AFOSR-727-65 PHS MH 13630, and PHS FR 00254

The heart rate (HR) response to five intensities of sound was examined in 18 subjects and to five intensities of light in 12 subjects Each subject was tested on four occasions at monthly intervals After covariance adjustment significant acceleration to sound was found within the first five beats after stimulus onset but no significant deceleration occurred There was no differences between testings Individuals HR acceleration was reliable over testings and differing experimental contexts No habituation occurred and no consistent relationship between HR response and ego strength was found There was no significant HR response to light stimulation The results were discussed in relation to Graham and

Clifton's hypotheses concerning the relationship of the HR response to the orienting reflex

**A69-80834**  
**EFFECTS OF ATTENTION AND ACTIVATION ON THE VISUAL EVOKED CORTICAL POTENTIAL AND REACTION TIME**

Philip M Groves (Calif, U Irvine) and Robert G Eason (N C, U Greensboro)

*Psychophysiology* vol 5 Jan 1969 p 394-398 8 refs  
 Grant NSF GB-4067

An attempt was made to assess the relative contributions of arousal and attentional factors affecting the amplitude of the visual evoked cortical potential and reaction time latency. Subjects were studied under the following four conditions: (1) passively watching a small dim intermittent flash; (2) reacting to each flash by releasing a lever, thereby giving a reaction time; (3) reacting to each flash within a specified period of time in order to avoid an uncomfortable shock to the fingers; and (4) reacting to each flash while receiving occasional unavoidable shock. Statistical analyses revealed that the evoked potentials recorded during the avoidable shock condition (3) were significantly larger than during the other three conditions. Reaction times were routinely shorter during condition (3) followed by the no-shock (2) and then unavoidable shock (4) conditions.

**A69-80835**  
**THE LOCALIZATION OF NON-TACTILE THERMAL SENSATIONS**

Marianne L Simmel and Alan Shapiro (Brandeis U Dept of Psychol Waltham Mass)

*Psychophysiology* vol 5 Jan 1969 p 415-425 15 refs

An experiment by previous investigators on the localization of thermal sensations was replicated. The present somewhat more detailed results essentially confirm the findings of the earlier authors. Thermal sensations evoked by nontactile thermal stimuli can be localized; their localization is less accurate than that of tactile stimuli and the accuracy of localization increases with increasing intensity of stimulation and sensation. To account for these findings several alternative hypotheses concerning the interaction between thermal and tactile modalities and large and small fiber sensory systems were suggested.

**A69-80836**  
**THE INFLUENCE OF EVENING ACTIVITY ON THE ONSET OF SLEEP**

Peter Hauri (Va U Charlottesville)

*Psychophysiology*, vol 5 Jan 1968 p 426-430  
 Grant PHS MH-04151

Sleep onset following three kinds of evening activities was investigated. These activities were six hr of strenuous physical work, six hr of intensive studying and mental work, and six hr of relaxation, i.e., watching TV, listening to records and reading magazines. Subjects were 15 young men, each of whom participated in one activity per night for three non-consecutive nights. Results showed that studying delayed sleep onset by an average of about six min, but subjects took similar times to fall asleep after exercise and after relaxation. At the moment of sleep onset, heart rate, respiratory rate, rectal temperature and peripheral pulse volume all were significantly elevated after exercise when compared to studying and relaxation. Both of these results combined were interpreted as indicating that the level of physiological, systemic activity is relatively unimportant for sleep onset, while the level of mental stimulation seems to play a more important role.

**A69-80837**  
**STIMULUS DETECTION DURING PERIODS OF HIGH AND LOW HEART RATE**

David C Edwards and Jonathan E Alsip (Iowa State U Dept of Psychol Ames)

*Psychophysiology* vol 5 Jan 1969, p 431-434 9 refs

The study was designed to test the suggestion of a previous investigation that elevated heart rate (HR) and blood pressure could lead to decreased sensory sensitivity and that a reduction in HR and blood pressure may facilitate sensory sensitivity. A tone of five intensities encompassing the subject's intensity threshold was presented randomly 25 times under high and 25 times under low transient HR. The results indicated no differences in the number of correct detections under high and low HR and no interaction between HR level and tone intensity. It was concluded that low HR may well be a necessary condition for increased sensory sensitivity but that it is not a sufficient condition. Discussion was directed to the range of possible HR changes and the possible requirements of the sensitivity mechanism.

**A69-80838**  
**HABITUATION OF THE ORIENTING RESPONSE TO MULTIPLE STIMULUS SEQUENCES**

S H Lovibond (Adelaide, U Dept of Psychol Australia)

*Psychophysiology* vol 5 Jan 1969 p 435-439 9 refs  
 Grant ARGC 65/15863

The purpose of the study was to test the hypothesis that rate of habituation of the orienting response (OR) to multiple stimulus sequences is a negative function of the uncertainty (H) in the stimulus series. Seven groups of 30 subjects received 10 presentations of a 10 sec light stimulus (S<sub>1</sub>) followed immediately by a one sec 70 db auditory stimulus (S<sub>2</sub>) on 0, 10, 20, 50, 80, 90 or 100% of trials. The response measure was change of skin conductance to S<sub>1</sub>. Mean conductance change scores of the various groups were closely related to the degree of uncertainty (H) in the stimulus series. The results were interpreted as offering support for Sokolov's OR theory and the view that, in human information processing, information concerning stimulus probabilities is integrated continuously to form the basis of predictive extrapolation.

**SOME CURRENT PROBLEMS OF HIGH ALTITUDE PHYSIOLOGY [NIEKTÓRE AKTUALNE ZAGADNIENIA FIZJOLOGII WYSOKOGORSKIEJ]**

Jerzy Kaulbersz

*Folia Medica Cracoviensia* vol 10 no 3, 1968 p 377-396  
 51 refs In Polish

The main reactions of humans at high altitude were revealed in laboratories on mountain passes at summits in the Alps, in the Andes of South America, at other elevations and during some scientific and mountaineering expeditions. A sudden decrease in atmospheric pressure to a half or more may evoke disturbances similar to Caissou's disease. Hypoxia occurs during the first hours. Previous investigations revealed that young animals nursed by mothers exposed to a simulated high altitude for several hours each day show a considerable increase of erythropoietic activity and a hemoglobin concentration. The mediation of a humoral acting erythropoietic factor is obvious. The oxygen blood saturation is greater in newcomers than in high altitude natives. The oxygen saturation does not seem to be the decisive factor in acclimatization. Individuals whose blood is saturated with oxygen are less physically efficient than persons with a low oxygen saturation. The iron

## A69-80840

turnover rate and absorption of iron is increased at altitude. Beside a greater oxygen capacity of blood a rise of pulmonary ventilation is the second most important compensatory factor in high altitude environment. At an altitude of 7,000 m the pulmonary ventilation increases two-fold. Also a greater response of the respiratory center to CO<sub>2</sub> is noted. Maximal oxygen consumption is less in high altitude than at sea level, whereas the submaximal work expressed in liters of oxygen per min remains unchanged. Physical endurance at an altitude of 4,540 m declines significantly; the magnitude of work performed drops as compared to sea level values. During work of the same intensity mountain dwellers produce less lactic acid. Taking into consideration the fact that the blood pressure of the high altitude natives is usually low, a previous investigator found that hypoxia diminishes experimentally dwellers produce less lactic acid. Taking into consideration the fact that the blood pressure of the high altitude natives is usually low a previous investigator found the hypoxia diminishes experimentally elevated blood pressure. Heart weight of rats born at high altitude exceeds at the end of the eighth mo the heart weight of animals born at sea level by 90%. When the body weight drops the life chances diminish. Growing in the mountains the rats show a deficiency of the hypophysis and a disturbance in the function of the hypothalamus. Anhydrase carbonate is more active in rats at high altitude whereas the activity of its inhibitor-acetazolamid-diminishes. The neuron inhibitor, gamma amino butyric acid is less effective at altitude. Limitation of physical work at high altitude is mainly the consequence of the diminished oxygen diffusing capacity of newcomers as compared with the natives. In altitude residents cardiovascular limitations seem to occur first before dyspnea. The role of cerebrospinal fluid in high altitude acclimatization is noted. Above 3,800 m the fecundity of the lowlanders is significantly reduced. The acclimatization of a lowland inhabitant at high altitude even after a longer stay seems not to be perfect. The best index of acclimatization is doubtless a great tolerance to exercise of maximal type. Only few specially qualified lowland residents may equal the altitude natives.

## A69-80840

### EFFECTS OF PREVIOUS CALCIUM INTAKES ON ADAPTATION TO LOW AND HIGH CALCIUM DIETS IN RATS

J D Benson, R S Emery and J W Thomas (Mich State U Dept of Dairy East Lansing)

*Journal of Nutrition*, vol 97, Jan 1969 p 53-60 31 refs

To study adaptation to low and high calcium diets female weanling rats were fed for two periods in one of four ways: (1) a low calcium diet (0.2%) throughout both periods (LL), (2) a low calcium diet followed by a high calcium diet (0.9%) (LH), (3) a high calcium diet followed by a low calcium diet (HL) or (4) a high calcium diet throughout both periods (HH). Rats (LL and LH) accustomed to low intakes of calcium retained a larger percentage of the dietary calcium than rats (HL and HH) accustomed to higher amounts of the element regardless of whether the present calcium intake was low or high. Up to 133 days of age the bones of the LL and LH groups contained less calcium and phosphorus per unit of bone weight than did the bones of the HL and HH groups. At 156 days of age (end of experiment), however, the bones of all groups contained equal concentrations of calcium and phosphorus. These data were interpreted to mean that body calcium stores control calcium retention. Parathyroid activity as estimated by parathyroid gland weight and urinary phosphate values was greater in the LL group than in the HL group. These data demonstrated that the adaptation to both high and low calcium diets was affected by previous dietary calcium levels and confirmed the idea that body stores of calcium control its retention.

## A69-80841

### INFLUENCE OF MICROORGANISMS ON INTESTINAL ABSORPTION OLEIC ACID I-131 AND TRIOLEIN I-131 ABSORPTION BY GERM-FREE AND CONVENTIONALIZED RATS

Bud Tennant, Mario Reina-Guerra, Doris Harrold and Marvin Goldman (Calif U, School of Vet Med, Dept of Clin Sci and Radiobiol Lab Davis)

*Journal of Nutrition*, vol 97, Jan 1969 p 65-69 18 refs

*Assn for Gnotobiotics, Inc., Ann Meeting Buffalo, Jun 9-10, 1968*

Several differences in lipid metabolism have been demonstrated between germfree and conventional rats. To evaluate the role which intestinal absorption might play in determining these differences the absorption of oleic acid <sup>131</sup>I and triolein <sup>131</sup>I was compared in germfree and conventionalized rats. Gastric emptying of both compounds appeared to be delayed in germfree rats and correspondingly less radioactivity reached the cecum during the six-hr period following intragastric administration. When corrections were made for differences in gastric emptying germfree and conventionalized rats absorbed oleic acid and triolein at similar rates. Under the conditions of the studies, intestinal microorganisms did not appear to influence the rate of either lipolysis or fatty acid absorption directly but significantly influenced the rate at which fat was transported along the gastrointestinal tract.

## A69-80842

### PERFORMANCE OF RATS ALTERNATELY FED DIETS HIGHER AND LOWER IN ENERGY OR PROTEIN

Karl M Barth and James C McConnell (Tenn U Knoxville)

*Journal of Nutrition*, vol 97, Jan 1969 p 85-89 14 refs

Effects of alternating higher and lower energy or protein diets on carcass composition, growth, voluntary feed intake and feed conversion were determined with male albino rats. The five dietary regimens, each fed to six singly caged rats for 32 days, were as follows: a 10% corn oil diet alternated with a 5% corn oil diet (1) every two days and (2) every four days; a 20% casein diet alternated with a 10% casein diet (3) every two days; (4) every four days; and (5) the control diet containing 7.5% corn oil and 15% casein fed throughout the trial. When rats were fed by the two fluctuating energy regimens they consumed less feed, gained less and were less efficient in feed conversion than control rats and none of these differences was statistically significant. There were no significant differences in body moisture, protein or ether extract content of the carcasses. However, alternating dietary protein levels significantly decreased feed consumption and body weight gains ( $P < 0.05$ ) and significantly increased carcass moisture content in the two-day regimen as compared with control rats. Rats on the four-day fluctuating protein regimen had a 10% increase in carcass fat.

## A69-80843

### EFFECT OF LEVEL AND PATTERN OF ESSENTIAL AMINO ACIDS ON NITROGEN RETENTION OF ADULT MAN

Gladys S Romo and Hellen Linkswiler (Wis U Dept of Nutr Sci Madison)

*Journal of Nutrition*, vol 97, Jan 1969 p 147-153 12 refs

Two studies were conducted to determine the effect on nitrogen retention of increasing the dietary intake of essential and semiessential amino acids, patterned as in the poorly balanced protein of corn when total nitrogen was held constant. Men were fed diets containing approximately 6.00 g nitrogen daily of which crystalline amino acids and diammonium citrate provided 5.50 g

and ordinary foods the remainder. During five experimental periods of study one the eight essential and four semiessential amino acids patterned as in corn protein provided 1.10, 2.20, 3.30, 4.40 and 5.50 g nitrogen daily. During the sixth experimental period 2.20 g nitrogen was also provided by the essential and semiessential amino acids but the level of isoleucine was increased to that in the FAO provisional pattern. Each increase in the intake of essential and semiessential amino acids was accompanied by an increase in nitrogen retention. Increasing the level of isoleucine to that in the FAO pattern had no effect on nitrogen retention. In the second study nitrogen balance responses of men fed the corn and egg pattern were compared, equivalent amounts of nitrogen 2.20, 3.30 or 5.50 g were supplied by the essential and semiessential amino acids of the two patterns. When the essential nitrogen provided 3.30 or 5.50 g more highly positive nitrogen balances were obtained when subjects were fed the egg pattern than when they were fed the corn pattern of amino acids.

**A69-80844**  
**MOVEMENT CONTROL IN SKILLED MOTOR PERFORMANCE**

Steven W. Keele (Ore. U., Eugene and Portland)  
*Psychological Bulletin*, vol. 70, part 1, Dec. 1968, p. 387-403, 94 refs.  
 Contract AFOSR F44620-67-C-0099 and Grant NSF GB-3939, NIMH supported research.

The speed and accuracy of single movements depend on several factors such as direction of movement, distance to the target and accompaniment by simultaneous movements. The relation between speed, accuracy and distance appears to be determined by the time required to process feedback and to make corrective alterations in the movement. For a repetitive series of movements there is some evidence suggesting that control is shifted from feedback to a motor program. This view receives further support from demonstrations that the reproduction of single movements may be under programmed control. How the study of movements may be relevant to understanding perceptual and memory skills as well as motor skills is briefly mentioned.

**A69-80845**  
**METHOD, FINDINGS, AND THEORY IN STUDIES OF VISUAL MASKING**

Daniel Kahneman (Harvard U., Center for Cognitive Studies, Cambridge, Mass.)  
*Psychological Bulletin*, vol. 70, part 1, Dec. 1968, p. 404-425, 113 refs.  
 Grant PHS 1 PO1-MH 12623 and Contract NSF GS-1153.

The various paradigms in the study of visual masking are classified and related to cases of interference among contemporaneous stimuli. The dependent variables in masking studies are described. A distinction between criterion content and criterion level is introduced in the discussion of detection under masking and metacontrast. Various conceptions of identification of forms under masking and the contributions of masking effects to the study of psychological time are reviewed.

**A69-80846**  
**EXPLANATIONS OF GEOMETRICAL ILLUSIONS**

Ray Over (Dalhousie U., Halifax, Nova Scotia, Canada)  
*Psychological Bulletin*, vol. 70, part 1, Dec. 1968, p. 545-562, 90 refs.

The present review demonstrates that explanations of geometrical illusions in terms of deformation of the field of retinal induction, cortical satiation, directional eye movements and inappropriate constancy scaling generate incorrect predictions about the viewing conditions under which perceptual error occurs. None of these accounts is likely to be satisfactory without major revision of its basic propositions. Several other theories of illusions have an uncertain status at the present time, e.g., the lateral inhibition explanation, the centration theory and the contextual learning theory. Information is particularly needed on whether similar perceptual error occurs with visual, haptic and tactual judgment of an illusion figure and whether illusions are products of the subject's learning history. The relationship between illusions and figural aftereffects requires further examination, as does the issue of whether geometrical illusions constitute a single class of perceptual effects.

**A69-80847**  
**ANTICIPATION AND TIMING IN HUMAN MOTOR PERFORMANCE**

Richard A. Schmidt (Md. U., Dept. of Phys. Educ., College Park)  
*Psychological Bulletin*, vol. 70, part 1, Dec. 1968, p. 631-646, 77 refs.

Recent evidence concerning the role of anticipation and timing in human motor performance is reviewed. Evidence generally indicates that anticipation and timing can be learned, and that there is substantial forgetting over retention intervals of up to five months. The spatial and temporal predictability of the stimuli appear to be the most potent determiners of anticipation, but response-produced proprioceptive stimulus traces may also provide a basis for more accurate timing. Changes in the nature of the stimulus predictability produce widely different response strategies and after considerable practice anticipated responses become automatic, freeing the subject to perform other tasks simultaneously. There has been a general lack of interest concerning both intrasponse timing and the motor variables determining anticipation.

**A69-80848**  
**REVERSAL OF SIMULTANEOUS LIGHTNESS-CONTRAST**

Joseph A. Steger (N. Y., State U., Albany)  
*Psychological Bulletin*, vol. 70, part 1, Dec. 1968, p. 774-781, 40 refs.

The theoretical and experimental research on the reversal of simultaneous lightness-contrast (assimilation) is reviewed. Helson's differential stimulation hypothesis of contrast and assimilation is examined in view of recent research. The conclusion is reached that before a quantitative formulation incorporating both simultaneous lightness-contrast and assimilation can be complete, research is needed to assess the contribution of (a) area-luminance functions, (b) mode of viewing, (c) contours and divisions, (d) perceptual set, (e) absolute levels of luminance in the viewing situation, (f) adaptation of the eye, and (g) the nature of the experimental stimuli used.

**A69-80849**  
**HUMAN ADJUSTMENT TO AN EXOTIC ENVIRONMENT**

Jim H. Earls (Okla. U., Med. Center, Oklahoma City)  
*Archives of General Psychiatry*, vol. 20, Jan. 1969, p. 117-123, 5 refs.

The polaris submariner is a highly screened individual placed into a chronically stressful and frustrating environment. When the individual begins to develop feelings of anger in response to the frustrations he is faced by a cultural structure which does not readily permit the expression of anger. He is then forced to turn the

**A69-80850**

anger inward and then experiences a depressive phenomenon in reaction to operative stresses. The course of this depressive phenomenon is believed to be a ubiquitous phenomenon among the polaris submarine crews. A similar adjustment pattern has been reported from other isolated environments. It is believed that the polaris submarine represents an ideal laboratory in which to study the dynamics of group adjustment to unusual environments.

**A69-80850**

**MENTAL HEALTH PROBLEMS IN ANTARCTICA**

E K Eric Gunderson (Navy Dept Med Neuropsychiat Res Unit San Diego, Calif)

*Archives of Environmental Health*, vol 17 Oct 1968 p 558-564  
*Symp on Circumpolar Health Related Problems, College, Alaska Jul 25, 1967*

Navy Dept supported research

Mental health problems are of special concern at small Antarctic stations because of the extreme environmental conditions and because of the complete isolation from the outside world during the winter months. Emotional symptoms such as insomnia, anxiety, depression, and irritability were common and tended to increase during the winter months. Such changes in emotional adjustment were predictable to some degree from psychiatric screening information gathered prior to deployment to the Antarctic stations. Emotional adjustment depends importantly upon the man's specific job at the station and upon the appropriateness of his psychological needs, personality traits, and recreational interests for his particular role.

**A69-80851**

**ADAPTATIONS OF NATIVE POPULATIONS TO COLD**

Laurence Irving (Alaska U Inst of Arctic Biol College)

*Archives of Environmental Health*, vol 17 Oct 1968 p 592-594  
*Symp on Circumpolar Health Related Problems, College, Alaska Jul 25 1967*

Grant PHS GM-10402

A brief discussion is presented on the adaptations of men and animals to life in the arctic environment. Knowledge of this should help in adjusting newcomers and settlers to the northland.

**A69-80852**

**PATHOPHYSIOLOGICAL ASPECTS OF HUMAN ADJUSTMENT TO COLD**

Jack H Petajan (Alaska, U Inst of Arctic Biol Arctic Health Res Lab College)

*Archives of Environmental Health*, vol 17 Oct 1968 p 595-598  
*Symp on Circumpolar Health Related Problems, College Alaska, Jul 25 1967*

A discussion is presented of the pathological effects in humans of severe cold exposures. Clinical data on mountaineers, Eskimos, and other inhabitants of cold regions are discussed. Injuries of the limbs, frostbite, and neuropathic effects are included. Methods of therapeutic management of frostbite are suggested. Better methods of preventive medicine are needed to guard against cold injuries.

**A69-80853**

**RESPONSES OF MOUNTAINEERS TO MULTIPLE STRESSORS**

Peter Morrison (Alaska U Inst of Arctic Biol College)

*Archives of Environmental Health*, vol 17 Oct 1968 p 599-602  
*Symp on Circumpolar Health Related Problems, College Alaska, Jul 25, 1967*

Grant NIH GM-10402

With only partial and incomplete evaluation of the data at hand, extensive and widespread physiological alteration was detected which involved physical fitness, mental function, and peripheral neuromuscular function in climbers on Mt McKinley in 1967. Performance in preliminary tests did correlate with actual performance on the mountain. Thus, important differences in subjects' motivation may be of less significance in predicting their behavior than are the very rigorous conditions that they must undergo in this environment. Despite the difficulty of approach and the sometimes fragmentary nature of the data, we feel that this program, which is made possible by the contiguity of laboratory facilities and research specialists concerning mountains and mountaineers in Alaska, shows much promise. Particularly beneficial is its emphasis on interference factors in the neural control systems which are particularly sensitive to oxygen deficiency rather than in the effector organ system. The direct returns will include better knowledge of the physiological influences of a variety of factors applied synergistically and better knowledge for management of man at high altitude with some predictive criteria for his performance at altitude. For example, in chamber tests on eight mountaineers currently on Mt McKinley, cardiac responses to steady state work (10 in/4 sec) simulated at 16,000 ft ranged from a low of 96 to a high of 176 beats per min to provide an attractive response spectrum against which we hope to correlate actual performance on the mountain. Safer mountaineering practice and tests which can anticipate an incipient weakness, breakdown, or malfunction in man can also be expected from these studies. In broader terms, we hope that these studies may describe model systems which perhaps parallel the responses of primitive man in his encounters with environment, beast, or warring fellow, and point to attributes which condition him for survival.

**ENVIRONMENTAL OXYGEN TENSION AND ELECTRICAL BRAIN ACTIVITY IN HYPOTHERMIA [NAPRIAZHENIE KISLORODA V OKRUZHAIUSHCHEI SREDE I ELEKTRICHESKAIA AKTIVNOST' MOZGA PRI GIPOTERMII]**

IU S Aliukhin (USSR, Acad of Sci I P Pavlov Inst of Physiol Lab of Thermoregulation Leningrad)

*Fiziologicheskii Zhurnal SSSR*, vol 54 Sep 1968, p 998-1005  
17 refs. In Russian

Rarefaction of the inspired air to 360 and 220 mm Hg resulted in a relative reduction of the integral area (with brain temperatures from 30 to 22°C) and frequency (with brain temperatures from 32 to 18°C) of the rat cerebral cortex biopotentials in hypothermia. Over the whole range of the hypothermic temperatures, up to the discontinuation of the cerebral electrical activity, the brain of the rats to judge by its electrical activity was more resistant to the decrease of oxygen content in the inspired air than under normal body temperature (which was in accordance with the all known facts of the increased body resistance to hypoxic conditions in hypothermia). With increased cooling of the rats, the temperature at which the electrical cerebral activity vanished had little or no relation with the environmental oxygen tension. Oxygen deficiency did not seem to play a significant role in the hypothermic depression of the electrical cerebral activity in rats.

**A69-80855****THE EFFECT OF HYPOTHERMIA ON THE SUMMATION AND THE DIFFERENT INDICES OF UNCONDITIONED REFLEXES [VLIANIE GIPOTERMII NA SUMMATSIIU I DRUGIE POKAZATELI BEZUSLOVNYKH REFLEKSOV]**

V A Smotrov (Med Inst Dept of Normal Physiol Donetsk USSR)

*Fiziologicheskii Zhurnal SSSR*, vol 54 Sep 1968, p 1018-1024  
12 refs In Russian

A two-phase change in the excitability of the central apparatus of the flexor reflex was observed in the process of cooling the excitability was increased in moderate (32°C) hypothermia and lowered in cooling to 25°C or below. A decrease in the summational time and summational constant shifts of the optimal frequencies to higher rhythms and an increase in pessimal frequencies of the stimulation with a temperature of 32°C were indicative of the increased lability of the flexor reflex center under these conditions. An increase in the summational time and summational constant a decrease in the optimal and pessimal frequencies of the stimulation with a temperature of 25°C demonstrated a lowered lability of the center mentioned. The results suggested that there was a possibility to control by summation analysis the alteration of excitability in experimental hypothermia.

R A Shabunin (Med Inst Central Sci-Res Lab Sverdlovsk USSR)

*Fiziologicheskii Zhurnal SSSR* vol 54 Sep 1968 p 1034-1038  
15 refs In Russian

A transitional period was found when the steady state was impaired during the performance of static exercises by a group of 30 subjects. It was evidenced by the simultaneous appearance of spasmodic changes in some of the physiological indices, starting before the decrease in work capacity of the muscular activity. During this period the shifts in the neuromuscular cardiovascular and respiratory systems pointed to an impairment in the regulatory functions, as expressed by loss of coordination and fall in the efficiency of the physiological expenditure of the organism. This transition period, determined with polygraphical recordings of physiological parameters presented signs indicating an initial stage of fatigue. The basic practical criterion to diagnose the first stage of fatigue should be the functional incoordination instead of the decrease of the work capacity parameter. The diagnosis of fatigue should be based on a battery of tests.

**A69-80857****EFFECT OF POSTURE ON THE FUNCTIONAL STATE OF THE ARTERIAL VESSELS [IZMENENIIA FUNKTSIONAL'NOGO SOSTOIANIIA ARTERIAL'NYKH SOSUDOV PRI POSTURAL'NYKH VOZDEISTVIIAKH]**

M A Abrikosova (All-Union Sci-Res Inst of Phys Cult, Dept of Physiol, Moscow USSR)

*Fiziologicheskii Zhurnal SSSR*, vol 54 Sep 1968 p 1039-1044  
17 refs In Russian

The velocity of the pulse wave in the elastic and muscular type large arteries varied with changes in bodily postures the vascular wall tension decreased in the head downward position and increased in the head upward position. The vascular tone alterations in orthostatic tests varied with different vascular regions being most marked in the descending aorta and in the lower extremities.

vessels. These alterations were determined by the activity of different reflex and biophysical mechanisms. Regional peculiarities of the vascular tone depended mostly on local hydrostatic influences on the vascular wall. The vascular tone responses to orthostatic compensations were closely related with the degree of physical fitness. Alterations in vascular tone were less marked in athletes trained to postural changes as compared to those untrained.

**A69-80858****EFFECT OF MUSCULAR ACTIVITY ON THE REDISTRIBUTION OF THE BLOOD FLOW IN THE MAIN ARTERIES [ROL' MAGISTRAL'NYKH ARTERII V PERERASPREDELENII KROVOTOKA POD VLIANIEM MYSHECHNOI DEIATEL'NOSTI]**

V V Vasil'eva and N A Stepochkina (P F Lesgaft Inst of Phys Cult Dept of Physiol, Leningrad, USSR)

*Fiziologicheskii Zhurnal SSSR*, vol 54 Sep 1968 p 1051-1056  
21 refs In Russian

Four series of experiments were conducted to study the effect of physical exercise on the functional state of the arteries in athletes practicing various sports. The last series were repeated in a pressure chamber at simulated altitudes of 2,500 and 4,000 m. Sphygmographic recordings of the carotid, femoral, radial and tibial arteries were made before and 20 to 60 sec after exercise to determine the propagation velocity of the pulse wave in the upper and lower limbs. The results showed different changes in the main arteries viscoelasticity. On a background increase of rigidity in the arteries in the inactive regions of the body a decrease in the rigidity of the vessels supplying blood to the working muscles was observed and which allowed an estimation of the blood supply to working and non-working muscles. Physical work caused a significant increase in the arterial blood pressure in non-working regions of the body but in working regions the arterial pressure increased insignificantly or even decreased. This was apparently related with the dilatation of the arterioles in the working muscles. With decreased barometric pressure, the vascular reactions observed at sea level changed, and deprived the active muscles of an adequate blood supply. It could be assumed that during training at high altitudes the general vascular reactions were different and trained subjects were able to perform prolonged and intensive work under these conditions.

**BLOOD SERUM LIPIDS OF YOUNG MEN IN RELATION TO STRESS AND PHYSICAL ACTIVITY [LIPIDY KRVNEHO SERA U MLADYCH MUZOV V ZAVISLOSTI OD STRESU A FYZICKEJ AKTIVITY]**

A Cagánová S Cagán V Simko and P Glesk

*Bratislavske Lekarske Listy* vol 50 Sep 1968 p 321-337 124 refs In Czech

The values of blood serum lipids in young men 18 to 26 yr of age, were studied in relation to acute mental stress and regular sports activities. Under stress on the day of an examination statistically significantly raised values of the beta-lipoproteins, iodine number, beta to alpha lipoprotein ratio and a decrease in the alpha-lipoproteins were found in comparison with the values obtained in the course of the university term. Between the group of athletes and non-athletes no significantly pronounced differences were found in the levels of blood serum lipids as reported by several authors in literature. A single physical load exerted no substantial influence on the blood serum lipids in any of the investigated groups. Likewise no substantial differences were found between the group of athletes and non-athletes when serum lipids were studied in the course of the term in the period of a relative mental relaxation. Only in the period of pronounced stress immediately before an examination did the level of cholesterol and beta-lipoproteins rise in the non-athletes to the border-line of statistical significance and that of phospholipids to statistically significantly raised values, whereas in the athletes the cholesterol level fell insignificantly and the rest of the fractions did not undergo any substantial changes. Attention was drawn to the fact that the main importance of physical education and sport consisted in modifying the functional state of the organism, in the training of the main systems and in the preparation of the organism for the control of adequate especially mental reactions.

**BONE MARROW, GRAVITATION AND WEIGHTLESSNESS [KOSTNYI MOZG, GRAVITATSIIA I NEVESOMOST']**

P A Korzhuev (USSR Acad of Sci Inst of Evolutionary Morphol and Animal Ecol, Moscow)

*Zhurnal Obshchei Biologii*, vol 29 Sep-Oct 1968 p 587-593  
18 refs In Russian

The skeleton of animals dwelling in different gravitational fields presented differences which played a very important role in the adaptation to gravitation. In this respect aquatic animals differed from terrestrial ones by a lighter skeleton and a smaller amount of bone marrow. The exposure of animals to prolonged weightlessness should lead to a sharp depression of the bone marrow function and consequently, could not be without effect on the organism and should be regarded as a dangerous factor.

A69-80866

**THE FUNCTIONAL STATE OF THE KIDNEYS IN WORKERS EXPOSED TO THE PROLONGED ACTION OF CHLORORGANIC CHEMICAL POISONS [FUNKSIONAL'NOE SOSTOIANIE POCHEK U RABOTAIUSHCHIKH V USLOVIAKH DLITEL'NOGO VOZDEISTVIA KHLORORGANICHESKIKH IADOKHIMIKATOV]**

N G Loganovskii (Kiev Inst of Labor Hyg and Occupational Diseases, UkrSSR)

*Vrachebnoe Delo*, no 10, Oct 1968, p 82-86 In Russian

A study of 106 persons suspected of chronic intoxication with chlororganic chemical poisons, DDT, benzene hexachloride ethersulfonate (ovotran) revealed that prolonged contact with the mentioned substances led to more or less distinct disorders of the renal functional capacity, the renal plasma flow being disturbed first. These renal disorders may be caused by direct effect of chlororganic substances on the kidneys and through their toxic effect on other organs and systems (central nervous system, cardio-vascular and endocrine systems, liver, etc.)

A69-80867

**EFFECT OF BASIC MILITARY TRAINING ON THE CARDIOVASCULAR CAPACITY OF DRAFTEES [WPLYW SZKOLENIA UNITARNEGO NA ZACHOWANIE SIE WYDOLNOSCI SERCOWO-NACZYNIOWEJ U NOWO WCIELONYCH ZOLNIERZY]**

Edward Sibiga

*Lekarz Wojskowy*, vol 44, no 4, 1968, p 255-258 In Polish

The Crampton test was used to study the effect of basic physical training in 28 new army recruits. The subjects were tested before and at the end of the training period. Then findings showed an increase of 11% in the Crampton's test index value in all the soldiers at the end of the training period; this increase was statistically characteristic ( $t = 3.147$  with  $P = 0.05$ ) which proved that the adaptation of the cardiovascular apparatus to the physical stress produced by the training was beneficial to the physical fitness of the recruits. The use of the Crampton test was recommended for the evaluation of the physical fitness of the soldiers during their military service.

**MECHANISMS INVOLVED IN VISUAL ORIENTATION CONSTANCY**

R H Day and N J Wade (Monash U, Victoria, Australia)

*Psychological Bulletin*, vol 71, Jan 1969, p 33-42, 44 refs

Visual orientation judgments made during body tilt (E- and A-effects) during centrifugation (oculogravic effect) and following prolonged tilt (aftereffect) are interpreted in terms of visual

orientation constancy. Data from two classes of experiments, those using labyrinthine-defective subjects and those involving different combinations of posture, indicate that three systems are involved in orientation constancy. These are the vestibular otolith system and the proprioceptive systems of the neck and trunk. Although the three systems are involved in the E-, A-, and oculogravic effects, adaptation of only the neck and trunk systems generates the aftereffect.

**EFFECTS OF HYPNOSIS AND MOTIVATION ON RESISTANCE TO HEAT STRESS**

Perry London (Southern Calif U, Los Angeles), Michael E Ogle (Washington U, St Louis, Mo) and Irving P Unikel (Ga U, Athens)

*Journal of Abnormal Psychology*, vol 73, Dec 1968, p 532-541, 34 refs

Grants NIMH 1-K01-MH-12853 and NIMH 1-K3-MH-31,209

This paper reports an experiment which examined the relative effects of hypnosis, exhortative instructions, and routine task-performance instructions on the performance which individuals who differed in their degree of hypnotic susceptibility rendered on a continuous performance task both under normal conditions and under conditions of induced stress. High-susceptible (T) and low-susceptible (UT) subjects operated a pursuit rotor at room temperature and then under extreme heat. Performance of all subjects under stress improved after they were either hypnotized or exhorted to perform better; exhortation had a slightly but nonsignificantly greater effect. The initial performance of UTs was not significantly superior to that of Ts. Though the performance of Ts appeared more strongly affected by both hypnosis and exhortation than performance of UTs, this difference proved nonsignificant when subjected to conservative statistical test.

**MAXIMUM QUANTUM YIELD AND ACTION SPECTRUM OF PHOTOSYNTHESIS AND FLUORESCENCE IN CHLORELLA**

Rajni Govindjee, E Radinowitch and Govindjee (III), U Dept of Botany, Urbana

*Biochimica et Biophysica Acta*, vol 162, Nov 26, 1968, p 539-544, 27 refs

Grants NSF GB-3305, NSF GB-4040, PHS GM-12877, and PHS GM-13913

The maximum quantum yield of oxygen production in *Chlorella pyrenoidosa* was found, in new systematic experiments, not to exceed 0.12, under a great variety of conditions. Measurements were made on autospores and other synchronous cultures, at different CO<sub>2</sub> concentrations at very low light intensities, and in the presence of catalytic amounts of blue light. The action spectra (quantum yield as a function of wavelength) of photosynthesis and of chlorophyll *a* fluorescence *in vivo* were measured on the same *Chlorella* cell suspensions. In both cases a decline in the yield was observed in the red beginning at about 675 to 680 nm. The yield declines to 50% of the maximum, on both curves, at 690 to 695 nm. A strong dip was observed in the action spectra of both fluorescence and photosynthesis at 660 to 665 nm.

#### MODIFICATIONS OF RECEPTIVE FIELDS OF CELLS IN THE VISUAL CORTEX OCCURRING SPONTANEOUSLY AND ASSOCIATED WITH BODILY TILT

Gabriel Horn (Cambridge U Dept of Anat Great Britain) and Richard M Hill (Ohio State U Coll of Optometry Columbus)

*Nature* vol 221 Jan 11, 1969 p 186-188 8 refs

PHS supported research

Cats were used to measure field changes in 57 units of the visual cortex occurring spontaneously or in response to tilting the body When rotating the animal about its horizontal axis the relationship between the head axis and the field axis remained constant but in some units the angle between the field axis and the head axis changed after tilting the body The change almost always was in the direction of the original meridional axis It appeared that some compensation for bodily rotation was present These results and others showed that neither the axis nor the threshold of the receptive fields is unchangeable Changes occurred after rotation about the longitudinal axis of the body and may give a basis for the psychophysical occurrences in humans estimating gravitational vertical after head tilt

### A69-80874

#### INFLUENCE OF COLD EXPOSURE ON SKELETAL METABOLISM IN RATS

S H Cohn D G Baker A Jahn and C S Dombrowski (Brookhaven Natl Lab Med Res Center and Biol Dept Upton, N Y)

*Journal of Applied Physiology*, vol 26 May 1969 p 524-529 20 refs

AEC supported research

The effect of prolonged exposure of rats to a cold environment (2°C) was measured in terms of a number of parameters of skeletal metabolism in rats Kinetic tracer techniques providing the data for compartmental analysis were supplemented with Ca balance measurements to obtain the rates of Ca absorption, endogenous fecal excretion exchangeable space as well as accretion rates It was found that the prolonged cold exposure (30 and 300 days) resulted in a loss of weight but had no effect on the size of the compartments in the model used Further although the accretion rate of Ca into bone was not affected by the cold exposure in the 30-day cold-adapted group the accretion rate in the 300-day cold-adapted group was reduced compared to its control Both cold-adapted groups showed an appreciable increase in the resorption rate of Ca from bone and a very low rate of apposition of Ca into bone compared to the controls Possible mechanisms for these effects are presented in terms of the thyroid-adrenal medullary hormonal response of the animals to this cold stress The use of a mathematical model provided to be a useful framework against which the effects of cold exposure could be measured quantitatively

#### RELATIONS BETWEEN PHYSICAL TRAINING, ACCLIMATIZATION, AND HEAT TOLERANCE

Carl Gisolfi and Sid Robinson (Ind U Dept of Anat and Physiol, Bloomington)

*Journal of Applied Physiology* vol 26 May 1969, p 530-534 13 refs

Contract DA-49-193-MD 2449

This study was designed to determine effects of strenuous physical training on men's tolerance for work in heat Five healthy, untrained young men wearing only shorts shoes and socks attempted a 90 min walk on a treadmill (MR 4-5 met) in heat (50°C db 27°C wb) After this heat tolerance test the men performed six wk of intensive interval training in T-shirt shorts shoes and socks on an indoor track alternating with strenuous handball or basketball games one hr daily five times/wk in a cool environment (21°C) The workouts raised the men's rectal temperatures markedly and elicited pronounced sweating The training period was followed by a second work-heat exposure, in which all men completed the 90 min and had none of the symptoms of syncope shown by the majority in the initial exposure Rectal and mean skin temperatures averaged 39.6 and 37.8°C, and heart rates averaged 168 beats/min at the end of the initial exposure, corresponding mean values for the post-training heat tests were 38.7°C 36.8°C and 144 beats/min Mean sweat rate per degree increase in rectal temperature above 37°C increased 50% Interval training indoors improved the heat tolerance of the men significantly but did not fully acclimatize them for work in the heat

### A69-80876

#### EFFECTS OF ALTITUDE ACCLIMATIZATION ON BLOOD COMPOSITION OF WOMEN

John P Hannon, J L Shields, and Charles W Harris (Fitzsimons Gen Hosp, U S Army Med Res and Nutr Lab Physiol Div, Denver Colo)

*Journal of Applied Physiology*, vol 26, May 1969 p 540-547 33 refs

The effects of altitude acclimatization on blood composition were studied in eight coeds who lived on the summit of Pikes Peak (14 000 ft) for 10 wk During the period of altitude exposure the following changes were observed a transient increase in heart rate the maximum being reached on the first day of exposure an early rapid increase in hematocrit and hemoglobin which later became more gradual, an early and sustained reduction in plasma volume a rapid initial increase and a more gradual later increase in plasma protein concentration which was attributable to elevations in both the albumin and globulin fractions, a sustained decrease in the albumin-to-globulin ratio, a slight but sustained increase in serum oncotic pressure a slight but sustained decrease in blood water content and serum osmolality, and finally, an unaltered total leukocyte count but a significant increase in lymphocytes and significant decrease in monocytes It is concluded that the hematopoietic response to altitude is markedly less in women than that usually observed in men In women at least dietary iron supplementation enhances the rate of hematocrit increase at altitude And finally the loss of plasma volume is felt to be real and not due to simple dehydration

### A69-80877

#### MECHANICAL COMPONENTS OF HUMAN EYE MOVEMENTS

D A Robinson D M O'Meara A B Scott and C C Collins (Pacific Med Center Smith-Kettlewell Inst of Visual Sci, San Francisco Calif and Johns Hopkins U School of Med, Dept of Med Baltimore, Md)

*Journal of Applied Physiology*, vol 26 May 1969 p 548-553 26 refs

Grants NONR-3009(00) PHS AM-05524, PHS NB-06038 and PHS 5 SOL FR-05566

The isometric tensions of three lateral rectus muscles of three patients were measured while detached from the globe during strabismus surgery together with the force required to rotate the globe horizontally with both horizontal recti detached. The length-tension relationship was measured for several levels of innervation by requesting the patient to make known eye movements with the unoperated eye. Muscle tone in the primary position of gaze ranged from 12 to 17 g. The slope of the length-tension curve near the primary position was about 0.45 g/deg. The spring constant of the passive muscle components was about 0.25 and 0.33 g/deg for the globe suspensory tissues. This makes it possible to estimate the division of forces between agonist, antagonist and suspensory tissues for any angle of gaze. The time course of isometric tension associated with saccades clearly reveals the pulsatile nature of net active state tension that accounts for the rapidity of saccadic eye movements.

##### CIRCADIAN VARIATIONS IN HUMAN THERMOREGULATORY RESPONSES

Robert El Smith (Ky., U. Dept. of Physiol. and Biophysics, Lexington)

*Journal of Applied Physiology*, vol. 26, May 1969, p. 554-560  
25 refs

NASA Grant NGR 18-001-008 and Contract AF 41 (609)-2684

To investigate circadian variations in human temperature regulation, peripheral and rectal temperatures and peripheral heat and arterial blood flows were measured in clothed resting males in a neutral environment at different times throughout the day. Core-periphery heat conductance was considered a measure of thermoregulatory function and was used, together with peripheral heat and blood flows, in evaluating changes in this function. Circadian thermoregulatory changes were isolated from responses to environmental stresses variously by bed-rest procedures, by use of conventional statistics, and by periodicity analysis following Halberg's Cosinor method. The results so obtained indicate that circadian changes do occur in all thermoregulatory functions measured and that a possible mechanism for these variations may be a circadian change in circulatory pathways, and so in countercurrent heat exchange as well as a circadian variation in peripheral blood supply.

#### A69-80879

##### MAMMALIAN VENTRICULAR FUNCTION DURING SUBMERSION ASPHYXIA

Frank L. Ferrante and David F. Opdyke (N. J. Coll. of Med. and Dentistry Dept. of Physiol. Jersey City)

*Journal of Applied Physiology*, vol. 26, May 1969, p. 561-570  
44 refs

Grant PHS HE 10332

The objectives of this investigation were to assess changes in ventricular contractility during submersion, and to determine the efferent mechanisms of such alterations. Nutria (four to six kg) were completely submerged for one to five min. Left ventricular force (VF), left ventricular end-diastolic length (LVEDL), left ventricular pressure (LVP), and rate of rise of left ventricular pressure (LV dp/dt) were measured. During submersion both LVP and LV dp/dt decreased although left ventricular end-diastolic pressure and LVEDL increased. These data indicated a 25 to 50% decrease in left ventricular contractility during a dive. After vagotomy or atropinization (0.5 to 1 mg/kg iv) LV dp/dt increased at least 25% above control during submersion, indicating an increased left

ventricular contractility in the absence of parasympathetic (vagal) cardiac innervation. The  $\beta$ -adrenolytic agent, propranolol (0.4 to 0.6 mg/kg iv) administered to vagotomized or atropinized nutria greatly reduced or prevented the increased LV dp/dt, indicating increased adrenergic influences. Thus it appears that during a dive, both cholinergic and adrenergic influences increase, the former more than the latter, the net effect being a decrease in left ventricular contractility.

##### RESTING HEART RATE INVESTIGATIONS WITH TRAINED AND NONTRAINED HYPOPHYSECTOMIZED RATS

Charles M. Tipton, R. James Barnard, and Tse-Kia Tcheng (Iowa, U., Exercise Physiol. Lab., Iowa City)

*Journal of Applied Physiology*, vol. 26, May 1969, p. 585-588  
20 refs

Iowa Heart Assn. supported research

Cholinergic mechanisms have been cited to explain the bradycardia of training. This aspect was reinvestigated with male hypophysectomized rats who were trained to run in motor-driven treadmills. The experimental period was 80 days. Resting heart rates were measured before, during, and near the termination of the experiment. After 30 to 40 days and thereafter the trained animals had significantly lower heart rates than the nontrained animals. Atropine sulfate (1 mg/kg) was injected (ip) into both groups at the cessation of the training period. It was observed that the trained group had less cardiac acceleration than the nontrained group, a trend previously reported for normal trained rats. When neostigmine methylsulfate was injected in the same manner (300  $\mu$ g/kg), the trained group had significantly lower resting heart rates. This difference could not be explained by myocardial cholinesterase levels as there were no group findings that had statistical meaning. From these results it was concluded that the bradycardia association with training can occur in animals devoid of pituitary hormones and that trained and nontrained animals are different in their responses to cholinergic agents.

#### A69-80881

##### EFFECT OF URINE FLOW RATE ON UREA REABSORPTION IN MAN: UREA AS A "TUBULAR MARKER"

Marvin H. Goldstein, Paul R. Lenz, and Marvin F. Levitt (Mt. Sinai School of Med., Dept. of Med., New York City, N. Y.)

*Journal of Applied Physiology*, vol. 26, May 1969, p. 594-599  
23 refs

Grant PHS 5 TI HE 5505

Studies were performed in man to determine the magnitude of distal tubular urea reabsorption at different urine flow rates. Of filtered urea, 60% was reabsorbed during hydropenia and 35% during hydration. Diuretics inhibiting proximal or distal tubular sodium and water reabsorption were administered after achieving high urine flows by hydration or by modest osmotic loads with added antidiuretic hormone. The percent of filtered urea excreted increased with proximal but not with distal agents, suggesting that urea was not reabsorbed in the distal segments. The findings that urea reabsorption was confined to the proximal tubule with high urine flows and that only 25% was reabsorbed distally during hydropenia indicates the relative impermeability of the distal tubule to urea. Since sodium and water reabsorption was associated with parallel changes in urea reabsorption in the proximal but not in the distal tubule, it appears that analysis of changes in the percent of filtered urea excreted may be useful in localizing alterations in sodium and water reabsorption to specific tubular segments within the human nephron.

**INSTANTANEOUS PERIPHERAL VASCULAR RESISTANCE CHANGES RENDERED BY CRITICAL CLOSING PHENOMENON**

Robert M Olson (USAF School of Aerospace Med., Aerospace Med Div (AFSC) Biodyn Branch Brooks AFB, Tex)  
*Journal of Applied Physiology*, vol 26 May 1969, p 600-605  
6 refs

The gracilis muscle of five anesthetized dogs was used to study the critical closing phenomenon. Pressure-flow (i.e., resistance) measurements and tissue-staining techniques were used to detect the sudden closure of vessels in the microcirculation as the pressure driving blood through them was gradually decreased. Sudden rises in resistance occurred as the pressure fell through several discrete levels, one of which was near diastolic pressure. The tissue-staining technique suggested that sudden resistance rises are probably associated with sudden decreases in the number of functioning microcirculatory beds in the muscle tissue. Other investigators have reported a sudden rise in resistance (to infinity) associated with a shutdown of flow through all microcirculatory beds as pressure falls to a level near 10 to 20 cm H<sub>2</sub>O due to the critical closing phenomenon. The findings of this paper suggest that the critical closing phenomenon occurs not just at low pressures, but also at pressures near the normal physiologic range.

**A69-80883**

**PHYSIOLOGICAL RESPONSES DURING EXERCISE AND RECOVERY IN A FOOTBALL UNIFORM**

Donald K Mathews, Edward L Fox and David Tanzi (Ohio State U., School of Phys Educ Exercise Physiol Res Lab Columbus)  
*Journal of Applied Physiology*, vol 26 May 1969, p 611-615  
11 refs

Nine men ran on a treadmill (9.6 km/hr) in (1) shorts (MR = 397 kcal/m<sup>2</sup> per hr) (2) a football uniform (MR = 422 kcal/m<sup>2</sup> per hr) and (3) shorts plus a backpack weighing the same as the uniform (6.2 kg MR = 439 kcal/m<sup>2</sup> per hr). Environmental temperatures were 25.6° ± 1.2°C db and 1.0° ± 1.6°C wb. Exercise rectal temperature (T<sub>r</sub>) increased 1.7°C (to 39.0°C) in the uniform compared to 1.1°C (38.4°C) in shorts and 1.4°C (38.7°C) with the pack. Skin temperatures (T<sub>sk</sub>) in uniforms were at times 4.5°C higher than controls and less than 1.0°C lower than T<sub>r</sub>. End-exercise heart rate (HR) in uniforms averaged 186 beats/min compared with 168 in shorts and 179 with the pack. Peripheral blood flow and heat conductance were twofold greater in uniforms than in controls. Exercise evaporative cooling was 20 and 55 kcal/m<sup>3</sup> per hr less and sweating 128 and 83% more in uniforms than in shorts and pack respectively. During recovery uniform T<sub>r</sub>, T<sub>sk</sub> and HR differences were as large as during exercise. These differences are due to added heat production caused by the weight and the insulation and limitation of evaporation by clothing and pads.

**EXTERNAL ILIAC VEIN FLOW ITS RESPONSE TO EXERCISE AND RELATION TO LACTATE PRODUCTION**

Leonard A Cobb, Patrick H Smith, San Lwai, and Floyd A Short (Wash U., Dept of Med and King County Harborview Hosp Seattle)

*Journal of Applied Physiology*, vol 26 May 1969, p 606-610  
23 refs

Grants NIH HE-07478 and NIH 5-K3-HE-4570

The relationships between external iliac vein blood flow and lactate production were studied in 19 normal male volunteers. Standardized quadriceps exercise elicited a prompt rise in leg blood

flow averaging five times the resting level. In about two-thirds of the subjects blood flow began to fall immediately after exercise, in the other third a brief rebound in excess of the exercising level was observed. There was a significant correlation between blood flow during and after exercise so that the magnitude of postexercise flow was proportional to the level during exercise. These observations are further evidence against the concept of postexercise repayment of a blood flow debt. Both arterial lactate levels and lactate efflux during exercise were directly correlated with the magnitude of exercise blood flow. The subjects who produced high levels of lactate during exercise had correspondingly high levels of leg blood flow both during and after exercise. In this study, neither blood lactate concentration nor lactate production reflected inadequate oxygen delivery to the exercising limb.

**A69-80885**

**COMPARISON OF WEIGHTING FORMULAS FOR CALCULATING MEAN SKIN TEMPERATURE**

Duncan Mitchell and C H Wyndham (South Africa Chamber of Mines Human Sci Lab Johannesburg)

*Journal of Applied Physiology*, vol 26 May 1969, p 616-622  
18 refs

Different weighting formulas for calculating the mean skin temperature of men have been compared with mean of 15 temperature measurements weighted according to the regional distribution of body surface area. The skin temperatures used for the comparison were obtained during a study in which two nude resting men were studied in dry environments with air temperatures between 12.8°C and 49.1°C and windspeeds between 0.67 and 4.94 m/sec. Analysis revealed that the unweighted mean of the temperatures at 15 selected sites can be recommended for accurate work. This method of calculating mean skin temperature provides as a reliable a mean as any of the weighting formulas considered and is simpler to apply. Where the large number of measuring sites presents a problem and in field studies where simplicity of technique becomes important a four-point mean is recommended.

**A69-80886**

**IN VIVO HUMAN SURAL NERVE ACTION POTENTIALS**

Ryoichi Shiozawa and Huntington Mavor (Utah U Coll of Med Dept of Neurol and Veterans Admin Hosp Neurol Serv Salt Lake City)

*Journal of Applied Physiology*, vol 26, May 1969, p 623-629  
14 refs

Grants PHS 5 T1 NB 5309 and PHS 1-GS-128

*In vivo* measurement of the conduction velocity of the fastest conducting fibers of the sural nerve was performed by the electronic summation of orthodromic nerve action potentials in 40 normal subjects. The conduction velocity of fibers in a proximal segment (high ankle to popliteal fossa) was found to be greater than in a distal segment (foot to high ankle) confirming previous findings for the posterior tibial nerve. Technical details concerning this method of measuring sensory function in the leg are discussed. The technique was used in 11 patients. In all patients with clinical evidence of distal sensory neuropathy in the lower extremities sural nerve action potentials were absent. In two patients with severe motoneuronal disease, one of whom had markedly slowed motor conduction, sural nerve conduction was normal. Similar findings were present in a severe case of idiopathic polyneuritis.

**AN UNDERWATER WEIGHING SYSTEM UTILIZING "FORCE CUBE" TRANSDUCERS**

R Akers and E R Buskirk (Pa State U, Inst for Sci and Eng Lab for Human Performance Res University Park)

*Journal of Applied Physiology*, vol 26 May 1969 p 649-652  
6 refs

Grant PHS AM-08311

An underwater weighing system is described in which four electronic force cubes are used for the measurement of underwater weight and an open-circuit procedure for nitrogen washout from the lungs is used for the measurements of residual volume. The system is relatively compact, easy to use and could be fabricated in most laboratory shops. An important advantage of the system is that the subject retains control of the submersion procedure which reduces his apprehension and promotes cooperation. Valid and reliable underwater weights can be obtained with the system. The average standard deviation among replicate determinations of body density in four subjects was 0.0015. The intraindividual range in density for these four subjects was 0.005. Subsequent routine utilization of the underwater weighing system has proven its reliability and practicality.

#### A69-80888

##### DETERMINATION OF MEAN TISSUE OXYGEN TENSIONS BY IMPLANTED PERFORATED CAPSULES

Carl E Jones, Jack W Crowell and Elvin E Smith (Miss U School of Med Dept of Physiol and Biophysics, Jackson)

*Journal of Applied Physiology*, vol 26, May 1969 p 630-633  
15 refs

Grant NIH HE-02494 and Miss Heart Assn supported research

Using a miniaturized Clark electrode oxygen tensions within the fluid-filled space of perforated plastic capsules implanted in various tissues were determined. The intracapsular oxygen tension of subcutaneous tissue, skeletal muscle, liver and cerebral cortex was 33.3 ( $\pm$  2.1 SEM), 21.7 ( $\pm$  1.5 SEM), 18.3 ( $\pm$  1.1 SEM), and 15.8 ( $\pm$  1.0 SEM) mm Hg respectively. During hemorrhagic hypotension decreases in intracapsular oxygen tensions were obtained. During respiration with 100% oxygen, increases in oxygen tension were obtained. Since the oxygen tension of the fluid-filled space of the capsule will equilibrate with the mean oxygen tension of the tissue surrounding the space, it is believed that the intracapsular oxygen tension is indicative of the mean tissue oxygen tension.

#### A69-80889

##### BLOOD OXYGEN CONTENT MEASURED BY OXYGEN TENSION AFTER RELEASE BY CARBON MONOXIDE

C Herman Klingenstein, Marjani G Behar and Theodore C Smith (Pa U School of Med Dept of Anesthesia, Philadelphia)

*Journal of Applied Physiology*, vol 26, May 1969 p 653-655  
7 refs

Grants PHS GM-09070-06, PHS GM-15430-02, PHS 5-T10-GM-215-11, and PHS 5-K03-GM-34902-03

Whole-blood oxygen content can be measured by the increase in dissolved oxygen tension when an accurately known volume of blood is diluted to another accurately known volume with deoxygenated carbon monoxide-saturated physiologic saline. The CO displaces O<sub>2</sub> from hemoglobin without lysing the cells, raising the partial pressure of oxygen in the mixture by an amount proportional to the content of oxygen. CO-saline is stable and hence superior to other oxygen-releasing solutions. A five-port two-bore stopcock and a volume-limited syringe facilitate the sample preparation. The results are very reproducible and directly related to Van Slyke analyses, although a small systematic difference exists.

##### RESEARCH IN SPACE BIOLOGY IN MARCH 1967 [LES EXPERIENCES DE BIOLOGIE SPATIALE DE MARS 1967]

R Grandpierre

*Revue de Médecine Aérospatiale* vol 7 no 28, 1968, p 217-219 9 refs In French

Presented was a short analysis on the current state of research in 1967 in bioastronautics, based on current literature and the author's experimental data. The physiological and psychological effects of weightlessness and acceleration on men and animals were reviewed briefly in reference to the sensorimotor, neuromuscular and visual responses, vigilance, motivations, and adaptation. Further research for a better understanding of both physiological and psychological aspects of the gravity-free environment was deemed necessary.

#### A69-80891

##### BIOLOGICAL NOSE CONE FOR THE MONKEY [POINTE BIOLOGIQUE SINGE]

C de Lisle

*Revue de Médecine Aérospatiale*, vol 7 no 28 1968 p 220-223 In French

A short survey was given of some of the French problems encountered during the planning and development of the scientific payload of nose cones to be used in the study of monkey performance under weightlessness and high altitude environments. The problems that had to be solved were related both with the biological subject and instrumentation. The instrumentation and telemetry provided continuous data on such aspects as heartbeat, respiration, temperature, humidity, oxygen pressure, and task performance during flight. The difficulties in the programming system of the scientific experiments, the protection of the equipment against vibrations and the test carried out to check reliability and flight qualifications of the nose cone were mentioned.

#### A69-80892

##### USE OF PRIMATES IN SPACE RESEARCH [UTILISATION DES PRIMATES DANS LES RECHERCHES SPATIALES]

F Gallouin, J L Belugou and Fondanesche

*Revue de Médecine Aérospatiale*, vol 7, no 28 1968 p 224-226 In French

A discussion was presented on the advantages offered by the utilization of primates, particularly monkeys, in space research. Their anatomy and physiology bore the closest resemblance to that of man and made them very good subjects for space experiments. The species most suited for the space research were reviewed briefly as well as methods of purchase, cost and necessary care to keep the animals healthy. Primates were destined because of their level of intelligence (the order being characterized by a developed neopallium with numerous circonvolutions and a progressive opercularization of the central region) to participate in the space adventure.

##### RESULTS OF EXPERIMENTS CARRIED OUT ON PRIMATES SUBJECTED TO WEIGHTLESSNESS [RESULTATS DES EXPERIENCES EFFECTUEES SUR DES PRIMATES PLACES EN ETAT DE NON-PESANTEUR]

Chastelier

*Revue de Médecine Aérospatiale* vol 7 no 28, 1968 p 227-235 In French

A discussion was presented on the data gathered during two experimental ballistic flights of Vesta rockets lasting seven min.

**A69-80894**

and containing a macaque monkey. The animals electrocorticograms, neck and arms myograms, cardiac and respiratory rhythms and core temperature were recorded by telemetry as well as the animal performance of a manipulative task consisting of pressing a lever in response to a luminous signal. The animals were also filmed during the flight. The findings seemed to confirm the result of previous experiments conducted on rats and cats where synchronized patterns with slow waves and especially numerous hypersynchronous spindles appeared in weightless conditions. Transient or marked decrease in vigilance were usually observed in the state of weightlessness. These results tended to demonstrate that the lack of acceleration induced a marked decrease in the vigilance level more similar to a state of inhibition than drowsiness. It would seem that an acceleration of even a tenth of a g would be sufficient to maintain a normal level of vigilance.

**ALTITUDE ACCLIMATIZATION AND STRENUOUS PHYSICAL WORK [ACCLIMATEMENT A L'ALTITUDE ET TRAVAIL MUSCULAIRE EPUISANT]**

M V Strumza (Paris U Fac de Méd Lab de Biol Aeron, France)

*Revue de Médecine Aéronautique et Spatiale* vol 7 no 28 1968 p 236-238 In French

The effect of altitude acclimatization on the performance and work capacity was studied in white rats. The animals were trained under normal and hypoxic conditions on the treadmill until they became proficient then they were exercised for two successive periods of three wk each, under normal and hypoxic conditions alternatively. The rats were then put into a pressure chamber and exposed to progressively decreasing oxygen tensions for eight hr per day. Acclimatization to a simulated altitude of 7 500 m was reached in three wk. The animals continued their exercises for nine more wk under normal and hypoxic conditions then in normal conditions until their acclimatization disappeared. The physiological data studied included electrocardiography, basal metabolic rate and blood composition. It was found that altitude acclimatization markedly increased the animals endurance in physical work in hypoxia however the acclimatized rats showed no improvement in their performance in normal conditions. Among the major factors susceptible to improve physical performance were the increase of the amount of circulating hemoglobin combined with polycythemic neoformation and the drop in the basal metabolic rate.

**EXPERIMENTAL STUDY OF THE METABOLIC RELATIONSHIP BETWEEN HYPOXIA AND HYPOGLYCEMIA [ETUDE EXPERIMENTALE DES RELATIONS METABOLIQUES ENTRE L'HYPOXIE ET L'HYPOGLYCEMIE]**

P M Pingannaud and R Didkovski

*Revue de Médecine Aéronautique et Spatiale*, vol 7 no 28, 1968, p 244-245 8 refs In French

The effect of hypoxia on the glucide metabolism was particularly important in aerospace physiology as hypoxia could enhance the danger presented by anomalies in the glycoregulation of the aviator. To investigate the increased oxygen consumption caused by hypoglycemia an experimental study was carried out on white rats to analyze the variations in energy expenditure observed after administration of insulin in hypoxia. With the fall of the partial oxygen pressure a decrease in the variations of the energy expenditure was noted. It was postulated that hypoxia did not present an aggravating factor in hypoglycemia with regard to oxygen consumption on the contrary by reducing certain secondary hypoglycemic effects it represented an economy factor for the available oxygen.

**PARASITIC CALCIFICATIONS OF THE SOFT PARTS AND THE FLYING PERSONNEL [LES CALCIFICATIONS PARASITAIRES DES PARTIES MOLLES ET LE PERSONNEL NAVIGANT]**

R P Delahaye, P Bourniquot and A Combes (Hop Mil Dominique-Larrey Versailles France)

*Revue de Médecine Aéronautique et Spatiale*, vol 7, no 28 1968 p 251-254 In French

The discovery of parasitic calcifications among flying personnel is not a rare occurrence. Radiographical detection of parasitic calcifications presented generally only a retrospective interest nevertheless it was not an absolute rule and in certain affections the radiological finding of such occurrences did not signify that the growth of the parasitosis causing them was completed. It could be active topically or in other parts of the organism, as in the case of filariasis or schistosomiasis. Adult worms remained untouched by the sclero-calcareous processes, and the eggs could remain active in the reactive fibrous tissues. The hydatid cyst could also stay active for a long period in its calcareous shell. In toxoplasmosis active infectious foci could be similar to calcified ones. The radiological identification of certain cases of the parasitic calcifications was important to establish a correct diagnosis that could be followed by an appropriate and effective therapy.

**A69-80899****ADVANTAGE OF ATRAUMATIC TECHNIQUE FOR THE DETERMINATION OF CARDIAC OUTPUT [INTERET DES METHODES NON SANGLAN TES DE MESURE DU DEBIT CARDIAQUE]**

With the automatic hemodynamometer of Boucke and Brecht the blood pressures of 49 subjects (male and female normal persons and high performance sportsmen) were measured at rest submaximal, and maximal ergometer work at altitudes of 272 m, 2,320 m and 3 457 m Neither the systolic nor the diastolic pressure showed a regular modification at rest or at load in relation to altitude

**A69-80903****THE EFFECT OF INSTRUCTIONS ON VISUAL AND HAPTIC JUDGMENT OF THE MULLER-LYER ILLUSION**

Ray Over (Otago, U Dunedin New Zealand)

*Australian Journal of Psychology* vol 20 Dec 1968 p 161-164  
 8 refs

New Zealand U Grants Res Comm supported research

In an experiment with the Muller-Lyer figure instructions to judge apparent size-equality resulted in a larger visual illusion than instructions to judge objective size-equality The two sets of instructions did not, however have a differential effect on the amount of haptic illusion One reason for this difference may be that visual inspection permitted the subject to perceive the illusion figure in relation to its background while haptic inspection did not The data may also reflect differences in the way spatial information is sampled within the two modalities Haptic inspection entails widespread sampling from the figure under both instruction conditions With visual inspection it is possible that widespread sampling occurs with one set of instructions but not the other

**A69-80904****THE ROLE OF VISUAL AND KINAESTHETIC CUES IN LEARNING A NOVEL SKILL**

Judith I Laszlo (Western Australia U, Nedlands)

*Australian Journal of Psychology*, vol 20 Dec 1968 p 191-196  
 12 refs

Subjects were trained in a serial discriminative task under normal sensory feedback with visual (+K-V) information loss with kinaesthetic (-K+V) information loss The performance curves over the 10 training sessions showed initial high decrement for -K+V, and somewhat less decrement for +K-V groups All groups improved significantly the information loss groups reaching the same final performance level In Test 1 (normal feedback) the groups performed at equal levels Thus it was proposed that sensory information during the practice of a new skill influences performance rather than learning The results in Test 2 where feedback channels available to subjects differed from those utilized during training lent some support to the hypothesis of the dependence of skilled task on the modality utilized during training

**A69-80905****AUDITORY VIGILANCE THE EFFECTS OF COSTS AND VALUES ON SIGNALS**

W G Davenport (Newcastle U New South Wales Australia)

*Australian Journal of Psychology* vol 20, Dec 1968, p 213-218  
 11 refs

## A69-80906

The effects on signal detection performance of the value of correctly detecting a signal and the costs of a miss and false detection were examined for auditory vigilance behavior. Results suggested that poorer detection performance was obtained with increased costs for misses and false detections while the value placed on the correct detection of a signal had little effect. The  $d'$  statistic of signal detection theory was invariant with both signal costs and time while  $\beta$  varied with both factors. These results were interpreted to mean that the performance decrement during the vigil was due to an increased strictness in the criterion ( $\beta$ ) which the subject used for deciding whether or not a signal was present. The cost factors were effective in manipulating performance during the watch by causing changes in the subject's decision criteria. Findings from this study unanimously support those predicted by a previous investigator. This is suggested as perhaps being the best available basis for a theory of vigilance.

## A69-80906

### BRAIN 5-HYDROXYTRYPTAMINE AND ANTERIOR PITUITARY ACTIVATION BY STRESS

B N Dixit and J P Buckley (Pittsburgh U., School of Pharm Dept of Pharmacol Pa)

*Neuroendocrinology* vol 4 no 1 1969 p 32-41 22 refs

Grant NIMH MH-04511

In the present study, it was found that 10 to 12 hr pretreatment with tranlycypromine, a monoamine oxidase inhibitor 50 mg/kg i.p., increased the whole brain 5-hydroxytryptamine (5-HT) levels by more than 200% while 16 to 17 hr pretreatment of rats with 4-chloramphetamine, 200 mg/kg i.p. or feeding a tryptophan deficient diet decreased the whole brain 5-HT levels by approximately 74% and 63%, respectively. In spite of these great differences in the whole brain 5-HT levels the basal levels of plasma corticosterone in these groups were not significantly different when compared with the respective controls. Exposure to either cold or shaker stress activated the anterior pituitary of these rats to the same degree as in controls. These results are interpreted to suggest that the changes in the whole brain 5-HT level *per se* does not affect the degree of anterior pituitary activation due to stress stimuli. This however does not rule out the possibility that other parameters such as turnover rate may be of importance in determining the role of brain 5-HT in the activation of the pituitary by stress.

## A69-80907

### VENTILATORY MECHANICS AND EXPIRATORY FLOW LIMITATION DURING EXERCISE IN NORMAL SUBJECTS

Snorrri Olafsson and Robert E Hyatt (Mayo Clin and Mayo Found and Mayo Graduate School of Med Rochester Minn)

*Journal of Clinical Investigation*, vol 48 Mar 1969 p 564-573 25 refs

Grant NIH OH-146

The interrelationships among transpulmonary pressure, flow and volume during exhausting exercise in 10 normal adult males were examined. Expiratory transpulmonary pressures during exercise were compared with flow-limiting pressures measured at rest by two techniques. In no case did pressures developed during exercise exceed to an appreciable extent the flow-limiting pressures. This indicates that, during near-maximal exercise, ventilation remains efficient as judged in terms of the pressure-volume relationships of the lung. The mechanical properties of the lung do not appear to limit ventilation during exhausting exercise in normal subjects. No relationship could be found between the magnitude of transpulmonary pressure and exercise limitation. There was no

evidence that lung mechanics changed during exhausting exercise in normal subjects. The two methods for estimating expiratory flow-limiting pressures, the orifice technique and the iso-volume pressure-flow method, gave similar results.

This study quantifies the concentrations of circulating insulin, growth hormone, glucose, free fatty acids, glycerol,  $\beta$ -hydroxybutyrate, acetoacetate and alpha amino nitrogen in 11 obese subjects during prolonged starvation. The sites and estimated rates of gluconeogenesis and ketogenesis after five to six weeks of fasting were investigated in five of the subjects. Blood glucose and insulin concentrations fell acutely during the first three days of fasting, and alpha amino nitrogen after 17 days. The concentration of free fatty acids,  $\beta$ -hydroxybutyrate and acetoacetate did not reach a plateau until after 17 days. Estimated glucose production at five to six weeks of starvation is reduced to approximately 86 g/24 hr. Of this amount, the liver contributes about one-half and the kidney the remainder. Approximately all of the lactate, pyruvate, glycerol and amino acid carbons which are removed by liver and kidney are converted into glucose, as evidenced by substrate balances across these organs.

Plasma concentration, splanchnic and renal exchange and urinary excretion of 20 amino acids were studied in obese subjects during prolonged (five to six weeks) starvation. Splanchnic amino acid uptake was also investigated in postabsorptive and briefly (36 to 48 hr) fasted subjects. A transient increase in plasma valine, leucine, isoleucine, methionine and  $\alpha$ -aminobutyrate was noted during the first week of starvation. A delayed progressive increase in glycine, threonine and serine occurred after the first five days. Thirteen of the amino acids ultimately decreased in starvation, but the magnitude of this diminution was greatest for alanine, which decreased most rapidly during the first week of fasting. In all subjects, alanine was extracted by the splanchnic circulation to a greater extent than all other amino acids combined. Brief fasting resulted in an increased arterio-hepatic venous difference for alanine due to increased fractional extraction. After five to six weeks of starvation, a marked falloff in splanchnic alanine uptake was

attributable to the decreased arterial concentration. Prolonged fasting resulted in increased glycine utilization by the kidney and in net renal uptake of alanine. It is concluded that the marked decrease in plasma alanine is due to augmented and preferential splanchnic utilization of this amino acid in early starvation resulting in substrate depletion. Maintenance of the hypoalaninemia ultimately serves to diminish splanchnic uptake of this key glycolytic amino acid and is thus an important component of the regulatory mechanism whereby hepatic gluconeogenesis is diminished and protein catabolism is minimized in prolonged fasting. The altered renal extraction of glycine and alanine is not due to increased urinary excretion but may be secondary to the increased rate of renal gluconeogenesis observed in prolonged starvation.

**A69-80910****THE EFFECT OF CHICKEN AND HOG CALCITONIN ON SOME PARAMETERS OF Ca, P, AND Mg METABOLISM IN DOGS**

C F Cramer, C O Parkes and D H Copp (Brit Columbia, U Dept of Physiol Vancouver Canada)  
*Canadian Journal of Physiology and Pharmacology*, vol 47 Feb 1969, p 181-184 17 refs  
Grant MRC MT-774

Partially purified calcitonin extracted from both chickens and hogs was injected intravenously into young dogs. The effects of each extract were essentially similar in causing immediate depression of both plasma Ca and P but not Mg. The preparations caused hyperphosphaturia and decreased urinary excretion of magnesium. Gut transport of Ca, P, or Mg in either direction was unaffected by the extracts.

**A69-80911****LIGHT-INDUCED CHANGES IN THE FLUORESCENCE YIELD OF CHLOROPHYLL A IN VIVO 3 THE DIP AND THE PEAK IN THE FLUORESCENCE TRANSIENT OF CHLORELLA PYRENOIDOSA**

John C Munday Jr and Rajni Govindjee (Ill U, Dept of Physiol and Biophysics and Dept of Botany, Urbana)  
*Biophysical Journal* vol 9 Jan 1969 p 1-21 61 refs  
*Biophys Soc of Am, 12th Ann Meeting Pittsburgh, Feb 1968*  
Grants NSF GB-4040 NSF GB-7331, and NIH PH-GM-13913

The fluorescence transient of *Chlorella pyrenoidosa* excited by saturating light absorbed mainly by system II has a dip D between the peak I at 75 msec and the large peak P at 400 msec (the times depend on light intensity). This dip is observed in aerobic cells and in anaerobic cells where it is prominent. In anaerobic cells, the I-D decline is hastened almost equally by absorption of either 705 or 650 nm background light. In aerobic cells, supplementary 700 and 710 nm light given during the transient slightly hastens and heightens P. Methyl viologen, an exogenous system I electron acceptor, eliminates P. Results suggest that system I action causes D and that P is due to reduction of Q (fluorescence quencher) and intersystem intermediates caused by development of a block in oxidation of XH (X being the primary electron acceptor of light reaction I). Mathematical analysis suggests that if only two forms of Q participate beyond I then system I action is required for D. If three forms participate then the system  $Q \rightarrow QH \rightarrow Q$  may explain D. The Malkin model in its present form, does not allow D.

**A69-80912****LIGHT-INDUCED CHANGES IN THE FLUORESCENCE YIELD OF CHLOROPHYLL A IN VIVO 4 THE EFFECT OF****PREILLUMINATION ON THE FLUORESCENCE TRANSIENT OF CHLORELLA PYRENOIDOSA**

John C Munday Jr and Rajni Govindjee (Ill U Dept of Physiol and Biophysics and Dept of Botany Urbana)  
*Biophysical Journal* vol 9 Jan 1969 p 22-35 31 refs  
*Biophys Soc of Am, 12th Ann Meeting Pittsburgh, Feb 1968*  
Grants NSF GB-4040 NSF GB-7331 and NIH PH-GM-13913

The fluorescence transient of *Chlorella pyrenoidosa*, excited by saturating blue light, has a base level O, hump I, dip D, peak P and at 1.5 sec a quasisteady level S. With two sec exciting exposures and four min dark periods, preillumination-1 ( $\lambda \geq 690$  nm intensities 1 to 750 erg/sec-cm<sup>2</sup> incident) replacing the dark periods lowers I more effectively than preillumination-2 (650 nm  $\leq \lambda \leq 680$  nm) in both aerobic and anaerobic cells. Results indicate that the intersystem electron transport pool A as well as the primary electron acceptor of pigment system II Q (fluorescence quencher) is normally being reduced at I. Preillumination-1 lowers and delays P. Preillumination-2 (absorbed by both pigment systems) also lowers P but delays P only at low intensity; at high intensity it hastens P. Preillumination-1 raises S while preillumination-2 lowers S. With 30 instead of two sec exciting light exposures, preillumination-1 causes a large S increase, and at low intensity a P increase. The S effect seems to be of a long-term nature (26 to 29) rather than rapid changes in the redox state of Q. As exciting light intensity increases fluorescence yield at P increases three-fold maximally. The ratio of P (anaerobic) to O (aerobic) is 5.5. These high ratios restrict the Franck-Rosenberg model of photosynthesis which is based on fluorescence yield doubling.

**A69-80913****NORMAL SERUM CALCIUM LEVELS IN ALBINO MICE 3 DIURNAL VARIATIONS**

Carlos A Bonilla and Reed M Stringham, Jr (Midwestern U Dept of Biol Wichita Falls, Tex and Utah U Dept of Biol Sci Salt Lake City)  
*Life Sciences*, vol 7 part 2, Nov 15 1968, p 1193-1196 7 refs

Diurnal variations in the serum calcium level in 30 male Swiss albino mice were investigated. When blood was sampled four times from each animal during a 24-hr period and analyzed for calcium the values obtained at 6 p.m., midnight, 6 a.m., and noon were  $9.13 \pm 0.22$ ,  $9.60 \pm 0.27$ ,  $8.89 \pm 0.40$ , and  $9.95 \pm 0.34$  mg% respectively. These differences were not statistically significant.

**A69-80914****A SEMI-QUANTITATIVE TOTAL BODY SKIN CULTURE TECHNIQUE FOR PATIENTS IN A PROTECTED ENVIRONMENT**

G P Bodey, Z Kim and E Bowen (Tex U, M D Anderson Hosp and Tumor Inst Houston)  
*American Journal of the Medical Sciences*, vol 257, Feb 1969, p 100-115 13 refs  
Grants NIH CA 10041 and NIH FR 05511

A semi-quantitative method for culturing the entire skin surface has been developed for assessing skin contamination of patients occupying a patient isolator unit. Seven patients with acute leukemia were studied. Seventy-nine percent of 89 strains of aerobic bacteria, 80% of 15 strains of anaerobic bacteria, and 73% of 15 strains of fungi were eliminated with the germicidal soaps, alcohol rinses and topical antibiotics used. The face, groin and perianal areas were most frequent sites of persistent contamination. Occasionally gram-negative bacteria persist in the groin and perianal areas long after they were eliminated from the stool. This method

## A69-80915

of culturing the skin surface has proven very useful as a means of monitoring microbial contamination of patients in a protected environment

## A69-80915

### HIGH CALCIUM DIET AND THE PARAMETERS OF CALCIUM METABOLISM IN OSTEOPOROSIS

S H Cohn C S Dombrowski W Hauser and H L Atkins (Brookhaven Natl Lab Med Res Center Upton, Long Island N Y)

*American Journal of Clinical Nutrition* vol 21, Nov 1968 p 1246-1253 20 refs

AEC supported research

Kinetic tracer techniques providing the data for a compartmental analysis were supplemented with calcium-balance measurements to obtain the rates of Ca resorption, endogenous fecal excretion size of exchangeable Ca pools and accretion rates in seven osteoporotic patients Using each patient as his own control the effect of a high Ca diet (2.5 g/day) was then measured in terms of the above parameters of skeletal metabolism in these seven patients The high Ca diet resulted in a slightly increased accretion rate but the primary effect was a decrease in the resorption rate, which resulted in an increased apposition of Ca to the skeleton Insofar as the high Ca diet produced a positive Ca balance and acted to inhibit bone resorption it can be considered to be beneficial to osteoporotic patients The use of a mathematical model proved to be a useful framework to objectively measure small changes in the values of the parameters of Ca metabolism of an individual patient not readily discernible by previous techniques

## A69-80916

### THE EFFECT OF INCREASED BAROMETRIC PRESSURE ON INTRA-OCULAR PRESSURE AND AQUEOUS DYNAMICS A PRELIMINARY REPORT

G H M Pretorius (Witwatersrand U Dept of Ophthalmol and Baragwanath Hosp, Johannesburg, South Africa)

*South African Medical Journal* vol 42 Dec 7 1968 p 1254-1256 15 refs

Witwatersrand, U and Council for Sci and Ind Res supported research

The intra-ocular pressure was demonstrated to remain unaltered in rabbits on single Schiötz tonometry readings under increased barometric pressure but the facility of outflow of aqueous humour is decreased under hyperbaric conditions The application of this principle to persons subjected to high pressures, e.g. deep-sea divers and caisson workers is significant and may put more emphasis on the aqueous dynamics rather than on the intraocular pressure whenever hyper- or hypobaric conditions prevail

## A69-80917

### EFFECT OF GLOVES ON CONTROL OPERATION TIME

James V Bradley (Antioch Coll Aerospace Med Res Labs and Behavior Res Lab, Yellow Springs Ohio)

*Human Factors*, vol 11, Feb 1969 p 13-20 7 refs

Five types of control (push buttons, toggle switches, knobs horizontally operable levers, and vertically operable levers) were operated at room temperature with the hand clothed as follows: no glove, wool glove, double glove, i.e., leather glove over wool glove. Operation time was measured. It was concluded that the effect of gloves on control operation time depends on the type of glove worn, the physical characteristics of the control, and the type of control operation required.

## A69-80918

### GLOVE CHARACTERISTICS INFLUENCING CONTROL MANIPULABILITY

James V Bradley (Antioch Coll Aerospace Med Res Labs and Behavior Res Lab, Yellow Springs, Ohio)

*Human Factors*, vol 11 Feb 1969, p 21-35

Both objective measurements and subjective ratings were made of the degree to which each of 18 widely differing gloves possessed each of the following characteristics: tenacity (i.e., resistance to sliding over a grasped surface), snugness of fit, suppleness, and protection against injury to the enclosed hand. Twenty-two subjects performed each of five different control operations while wearing each of the 18 gloves and while barehanded. For both objective and subjective measurement of the characteristics, it was found that degree of tenacity is correlated with speed of gloved operation of on-off controls; that amount of suppleness is correlated with rapidity of gloved operation of adjustable controls; and that increasing snugness of fit improves operation time for both types of control. The difference between operation times, gloved and barehanded, was found to depend strongly on the type of control operation required.

## A69-80919

### THE MEASUREMENT OF TRACKING PROFICIENCY

Charles R Kelley (Dunlap and Associates Inc, Santa Monica, Calif)

*Human Factors*, vol 11 Feb 1969 p 43-64 25 refs

Contract Nonr-4986(00)

The problem of measuring tracking proficiency is reviewed and analyzed. The five classes of measurements discussed are: (1) single-axis error amplitude scores, (2) multi-axis error amplitude scores, (3) simple frequency scores, control effort, (4) special engineering measurement techniques, and (5) adaptive tracking measurements. The most widely used score in psychological investigations, time on target, is shown not to be an interval measurement of tracking error amplitude and in addition is shown to be unreliable. Seventeen equations for the measurement of tracking skill are described. Adaptive tracking measurement techniques are shown to be more effective than are techniques employing fixed-difficulty tasks.

## A69-80920

### OXYGEN AND CARBON MONOXIDE EQUILIBRIA OF HUMAN ADULT HEMOGLOBIN AT ATMOSPHERIC AND ELEVATED PRESSURE

F Lee Rodkey, John D O Neal, and Harold A Collison (Natl Naval Med Center, U S Naval Med Res Inst, Lab of Anal Biochem, Bethesda Md)

*Blood*, vol 33 Jan 1969 p 57-65 19 refs

Navy Dept supported research

Adult human hemoglobin has been shown to have an affinity for carbon monoxide 218 times that for oxygen at 37° C. There is no change in the relative affinity between pH 6.8 and 8.8. The same value was obtained with whole blood and with concentrated undialyzed hemoglobin solutions. Measurements made at atmospheric pressure were identical with those at increased total pressure up to 21.4 atm. Substitution of helium for nitrogen as inert gas did not alter the value. The relative affinity constant K is increased by 2% by a decrease in temperature of 1° C.

**A69-80921****AN EXPERIMENTAL STUDY OF THE RETENTION OF RADIOACTIVE AEROSOL PARTICLES IN THE HUMAN RESPIRATORY TRACT [BEITRAG ZUR FRAGE NACH DER RETENTION RADIOAKTIVER AEROSOLPARTIKEL IM ATEMTRAKT]**

R Reiter

*Atomkernenergie*, vol 13, Nov-Dec 1968 p 437-443 24 refs  
In German

The retention characteristics of natural radioactive aerosols are studied by observations carried out with a human subject in a mine and the size-distribution spectrum of the aerosol and the amount of radon decay products absorbed on the particles are determined simultaneously. The results obtained thereby are compared with data from a four-stage retention simulator used to ascertain the distribution of inspired aerosol particles with reference to the anatomy of the respiratory tract and the percentage of expired material. The agreement between the two sets of data is found to be quite good, there is moreover, a conspicuously low retention rate for aerosols with diameters less than  $0.2 \mu\text{m}$ . The results are checked by independent experiments on animal lungs, in which the percentage of total retention for particles with diameters ranging from  $0.07$  to  $2.0 \mu\text{m}$  is measured.

**A69-80922****STRUCTURE AND FUNCTION OF CHLOROPLAST PROTEINS 7 RIBULOSE-1,5-DIPHOSPHATE CARBOXYLASE OF CHLORELLA ELLIPSOIDEA.**

T Sugiyama C Matsumoto T Akazawa (Nagoya U, School of Agr Seikagaku Seigy Kenkyu Shisetsu Chikusa, Japan), and Shigetoh Miyachi (Tokyo U Inst of Appl Microbiol Bunkyo-ku Japan)

*Archives of Biochemistry and Biophysics*, vol 129 Feb 1969 p 597-602 32 refs  
Grant PHS AM-10792-02

Ribulose-1,5-diphosphate (RuDP) carboxylase isolated from autotrophically grown cells of the green algae *Chlorella ellipsoidea*, was partially purified. The nature of the enzyme closely resembles the spinach leaf enzyme in its elution patterns on Sephadex gel filtration and DEAE-cellulose column chromatography migration on starch gel electrophoresis and the immunological specificity. *Chlorella* RuDP carboxylase exhibits essentially identical kinetic parameters of the regulatory enzyme with those of spinach enzyme (a) homotropic effect of  $\text{NaHCO}_3$  (b) allosteric activating effect of  $\text{Mg}^{2+}$  with respect to  $\text{NaHCO}_3$ , and (c) shift of optimum pH by elevating the  $\text{Mg}^{2+}$  concentrations.

**A69-80923****IONIC AND pH TRANSITIONS TRIGGERING CHLOROPLAST POST-ILLUMINATION LUMINESCENCE**

C D Miles and A T Jagendorf (Cornell U Div of Biol Sci Ithaca N Y)

*Archives of Biochemistry and Biophysics* vol 129, Feb 1969 p 711-719 19 refs  
Grants NIH GM-14479 and NIH GM 32599-02

The postillumination chemiluminescence of isolated spinach chloroplasts, previously shown to be caused by an acid-base transition, is found to be caused also by a transition from a low to a high ionic strength environment. The salt induction of luminescence is in competition with the acid-base luminescence, whichever comes first prevents light emission upon going through the second process. It was discovered that suddenly lowering the

pH to 3.2 or below also causes light emission. The acid procedure induces up to eight times as much light emission as the others and does not seem to compete with them in that raising the pH or the salt concentration causes a further amount of luminescence even after the acid-induced burst. All three procedures share a sensitivity to phosphorylation inhibitors and to DCMU, and all require preillumination of the chloroplasts. Chloroplasts subject to a low to high salt transition do not go into a high energy state as judged by either ATP formation or ATPase activation. Evidence is presented suggesting that even in the case of acid-base transition the high energy state is not the trigger for light emission.

**A69-80924****SECOBARBITAL AND NOCTURNAL PHYSIOLOGICAL PATTERNS**

Boyd K Lester Joe D Coulter, Lawrence C Cowden, and Harold L Williams (Okla U, Med Center, Dept of Psychiat, Neurol and Behavioral Sci Oklahoma City)

*Psychopharmacologia*, vol 13 Nov 4, 1968, p 275-286 27 refs

Sleep patterns of 14 male subjects were examined following a single oral dose (200 mg) of the barbiturate secobarbital. Compared to baseline medication caused definite changes in the amount and distribution of the electroencephalographic (EEG) states of sleep. With the drug a decrease in percent stage rapid eye movement (REM) and an increase in percent stage two were accompanied by fewer body movements and a trend toward less waking. A more striking effect was the drug-induced redistribution of EEG stages with slow-wave sleep potentiated during the first half of the night but virtually eliminated during the last half. Stage REM on the other hand was inhibited in the first half but returned to baseline levels in the last half of the night. Recent evidence suggests that such effects could result from modulation of brain levels of the monoamines. Within the stages of sleep the amount of fast EEG activity was increased by the drug, with a tendency toward desynchrony. Pre-central beta activity became especially prominent in stages REM and two (low-voltage phases), and this change was associated with inhibition of such phasic events as eye movements during REM sleep. Sigma spindles during stage two and spontaneous electrodermal responses in slow-wave sleep. Thus it appears that secobarbital potentiates tonic and suppresses phasic phenomena during sleep. A possible interpretation of these results is that secobarbital enhances electrical activity in forebrain structures while inhibiting the reticular activation system causing a reduction of phasic variability in all stages of sleep.

**A69-80925****SOME OBSERVATIONS SUGGESTING PRESERVATION OF SKILLED MOTOR ACTS DESPITE DRUG-INDUCED STRESS**

Hans Heimann (Centre de Rech Psychopathol Clin Psychiat U Prilly-Lausanne Switzerland) Charles F Reed (Temple U Dept of Psychol Philadelphia Pa) and Peter N Witt (N C Dept of Mental Health, Div of Res Raleigh)

*Psychopharmacologia*, vol 13 Nov 4 1968 p 287-298 11 refs

Geneva Sandoz and Geigy Pharm supported research

Measures of skilled motor performances both of a task-oriented (tests of eye-hand coordination) and incidental (control of facial and ocular muscles) nature were recorded for a sample of 20 healthy young adults before and after single administration of perphenazine, opipramol, imipramine and placebo at dose levels commonly supposed to produce mood or behavioral effects. It was anticipated that such performances would be sensitive even to slight changes

## A69-80926

in the subjects physiological and psychological state, the aim was to test the power of tests of subtle skills in providing indices of slight to moderate behavioral effects. The performance measures remained surprisingly little affected by all drugs despite their sensitivity to drug-independent improvement in performance throughout the experimental day, and despite evidences of drug-related effects, especially for imipramine and opipramol, in simple objective physiological measures and for imipramine alone in subjective measures taken concurrently. There may be a class of skilled sensory-motor acts particularly those related to well-learned daily activities which rather than being vulnerable to adverse effect remain efficient even in the presence of signs of disturbance of bodily function.

## A69-80926

### DOSAGE AND TIME EFFECTS OF CIGARETTE SMOKING

Marianne Frankenhaeuser, Anna-Lisa Myrsten, Michael Waszak, Aldo Neri and Birgitta Post (Stockholm U Psychol Labs Sweden) *Psychopharmacologia*, vol 13, Nov 4 1968, p 311-319 13 refs

Swed Med Res Council and Swed Council for Soc Sci Res supported research

Effects of cigarette smoking were examined in eight healthy habitual smokers. Comparisons between effects on catecholamine excretion produced by 2, 4 and 6 cigarettes smoked within a two hr period showed a progressive increase in adrenaline excretion with number of cigarettes while noradrenaline excretion was not noticeably affected. Comparisons between smoking and control conditions showed effects on hand steadiness, skin temperature, heart rate and blood pressure. Dose- and time-response curves indicated that the relatively largest effect was regularly produced by the first cigarette while the second to sixth cigarette produced progressively smaller changes.

### THE EFFECTS OF DEXTROAMPHETAMINE AND PHENOBARBITAL ON A SIMPLIFIED STANDARDIZED CFF MEASURE

Henryk Misiak and Edward F. Rzy (Fordham U, Dept of Psychol New York, N Y)

*Psychopharmacologia* vol 13 Nov 4 1968 p 346-353 10 refs

Warner-Lambert Res Inst supported research

The effects of a central nervous system (CNS)-stimulant, CNS-depressant, and placebo on critical flicker frequency (CFF) thresholds of 24 subjects were determined using a flicker-fusion test based on the psychophysical method of limits. Four conditions: 10 mg of d-amphetamine, 65 mg of phenobarbital, inert placebo and no-drug, were applied in a repeated measures design under double-blind conditions. Each session lasted three hr. Pulse was taken concurrent with CFF and an adjective checklist of subjective feeling was administered at the end of each session. Both CFF and mood checklist were sensitive to phenobarbital. Pulse differences appeared only under d-amphetamine. Longer test sessions, more frequent testing or more subjects seemed advisable for future work. The method of CFF measurement used most amenable to the aforementioned extensions appeared at least as sensitive as the more complex techniques previously employed.

## A69-80928

### CARDIAC FREQUENCY IN RELATION TO AEROBIC CAPACITY FOR WORK

C T M Davies (MRC Environ Physiol Res Unit, London School of Hyg and Trop Med London Great Britain)

*Ergonomics*, vol 11 Nov 1968 p 511-526 24 refs

Cardiac frequency ( $f_H$ ) and oxygen consumption ( $V_{O_2}$ ) during the transition from rest to exercise in relation to the aerobic capacity for work were studied in an Olympic athlete and a healthy male subject. The behavior of the  $f_H$  and  $V_{O_2}$  during the early phase of exercise was remarkably similar in both subjects. As exercise was increased in intensity a level of exercise was reached at approximately 1,700 cc/min in the non-athlete and 3,000 cc/min in the athlete beyond which the exchange ratio (R) began to show its first marked rise, the  $O_2$  debt curve departed from its rectilinear form,  $f_H$  began to exhibit a slower secondary rise to a delayed steady state value. The underlying mechanisms responsible for and the implications of these observed changes are discussed. It is suggested that the  $f_H$  during early exercise might be used to characterize the aerobic capacity of the individual. In order to investigate this problem further an analysis of healthy subjects of different ages and sex was presented. It was shown that the delayed rise in  $f_H$  only became marked at levels of exercise corresponding to 55 to 60% of predicted  $V_{O_2}$  max in well trained subjects and 45 to 55% predicted  $V_{O_2}$  max in less fit individuals. It was thus independent of sex, and age related only to the fitness of the individual. The possible use of an index derived from the adaptation of the heart rate to exercise ( $PDI^{65}$ ) as a basis for a simple rational test of capacity for aerobic work is discussed.

## A69-80929

### EXPERIMENTAL STUDIES OF SHIFT-WORK 2 STABILIZED 8-HOUR SHIFT SYSTEMS

W P Colquhoun, M J F Blake and R S Edwards (MRC Appl Psychol Res Unit Cambridge Great Britain)

*Ergonomics*, vol 11 Nov 1968, p 527-546 7 refs

Roy Naval Personnel Res Comm supported research

Thirty-one subjects were employed in an experiment to determine whether the relationship between efficiency at mental tasks and the circadian rhythm of body temperature observed in an earlier study was affected by an increase in the length of the duty-spell from four to eight hr. Subjects were assigned either to a control day shift (0800 to 1600), a night shift (2200 to 0600) or a morning shift (0400 to 1200) and were tested for a period of 12 consecutive days on the same shift. The control shift workers showed no consistent effects of fatigue due to the increased length of the duty-spell. Adaptation of temperature rhythm to work on the night shift was only partial but was relatively closely reflected in the recorded performance trends. Very little adaptation to work on the morning shift was observed and performance was thought to have been affected by partial sleep deprivation. It was concluded that body-temperature was as effective as a predictor of overall mental efficiency in most industrial type shifts as in the special four-hr shift system previously investigated.

## A69-80930

### TRAINING FOR VIGILANCE REPEATED SESSIONS WITH KNOWLEDGE OF RESULTS

E L Wiener (Miami U Dept of Ind Eng Coral Gables Fla)

*Ergonomics* vol 11 Nov 1968 p 547-556 18 refs

Grant PHS AC00250-02 UI 00014-02

Two groups of subjects were run in a visual monitoring test, one with knowledge of results (KR) providing instant feedback of correct responses, commissive errors, and missed signals, and the other with no knowledge of results (NKR). The groups were run for five 48-min sessions on consecutive days with a follow-up

transfer session five wk later. Results showed significant differences in detection rates between the groups on all five training sessions but not on the transfer session. Detection rates increased significantly during the five training sessions for both groups and at approximately the same rate. Commissive errors were significantly different only in the first two training sessions with the KR subjects showing more false alarms. Commissive errors did not increase or decrease over time within sessions or over the five training sessions.

**A69-80931**  
**PROPRIOCEPTION VARIABLES AS DETERMINANTS OF LAPSED TIME ESTIMATION**

M J Ellis, R A Schmidt and M G Wade (Ill. U., Children's Res Center Urbana)  
*Ergonomics*, vol 11 Nov 1968, p 577-586 19 refs  
 Grant PHS MH-07346 and Ill., State Dept of Mental Health supported research

It was postulated that increasing positional and force cues would provide more discriminable stimuli to serve as references for the reproduction of a motor response. The levels and mode of the proprioceptive feedback were varied during the coincident positioning task of moving a carriage along a trackway in 2.0 sec. In a balanced design with 80 subjects, two values of positional cues moving the carriage over 2.5 or 65.0 cm, and two values of force cues minimal resistance and 18.9 kg produced four different feedback combinations. Significant learning occurred during 30 trials with knowledge of results (KR) and the combinations involving movement produced the greatest accuracy. Throughout 30 trials without knowledge of results (NoKR) the estimates produced by the movement only and weight only groups became longer, while the control group and the movement plus weight group did not drift. It was suggested that the group differences were caused by fatigue. Interpolated rest of one min between groups of five trials during the KR condition shortened the first post-rest trial whence performance was restored by the remaining four trials. During NoKR the first post-rest trial was again shorter but since the remaining four were overestimated it was more accurate. In view of these results apparently redundant movements might aid in timing tasks requiring temporal and spatial organization.

**A69-80932**  
**EFFECT OF LOW LEVEL RED OR WHITE LIGHT ON DARK ADAPTATION**

Richard H Dohrn (USAF School of Aerospace Med, Aerospace Med Div (AFSC), Ophthalmol Branch, Brooks AFB Tex)  
*American Journal of Optometry and Archives of American Academy of Optometry* vol 46 Feb 1969, p 103-108 5 refs  
*Am Acad of Optometry Ann Meeting Chicago, Dec 12, 1967*

Eighteen subjects were pre-adapted for 20 min to a luminance of 0.1 ft-L of red or white light. The peripheral (11° inferiorly) light threshold and the threshold for foveal recognition of a four-position Landolt ring were determined with a Goldman-Weekers adaptometer. For foveal recognition there was no difference between red and white preadaptation. Peripheral thresholds following red light pre-adaptation were significantly lower than for white light, but these differences were so small that the practical advantage of red over white light pre-adaptation may be questioned.

**SURVIVAL OF T3 COLIPHAGE IN VARIED EXTRACELLULAR ENVIRONMENTS I VIABILITY OF THE COLIPHAGE DURING STORAGE AND IN AEROSOLS**

James C Warren and Melvin T Hatch (Naval Supply Center, Naval Med Res Unit No 1, Oakland Calif and Calif U School of Public Health, Naval Biol Lab, Berkeley)  
*Applied Microbiology*, vol 17 Feb 1969, p 256-261 16 refs  
*Am Soc for Microbiol 68th Ann Meeting, Detroit, May 5-10 1968*

The objective of this study was to determine the feasibility of using airborne T3 coliphage as a viral tracer in microbial aerosols. Although T3 coliphage was relatively stable when stored either at temperatures ranging from 21° to 37° C or in the frozen state at -20° C there was a two-log loss in infectivity when stored for 72 days at 4° C. Either agitation of stored coliphage suspensions held at 31° C or wide fluctuations in storage temperature produced an increased loss of infectivity. In the airborne state freshly prepared coliphage and stored coliphage behaved similarly with survival diminishing as the relative humidity (RH) was lowered. The greatest loss occurred during the first five min following aerosolization. The results showed that only under certain conditions of temperature and relative humidity can T3 coliphage be used as a satisfactory aerosol tracer.

**FACTORS AFFECTING THE PERSISTENCE OF STAPHYLOCOCCUS AUREUS ON FABRICS**

Lee J Wilkoff, Louise Westbrook and Glen J Dixon (Southern Res Inst, Chemotherapy Res Dept, Virus and Cell Biol Div, Birmingham, Ala)  
*Applied Microbiology* vol 17, Feb 1969, p 268-274 21 refs  
 Contract USDA 12-14-100-8317(63)

The persistence of *Staphylococcus aureus* (Smith) on wool blanket, wool gabardine, cotton sheeting, cotton knit jersey, cotton terry cloth and cotton wash-and-wear fabrics was studied. The fabrics were exposed to bacterial populations by three methods: direct contact aerosol and a lyophilized mixture of bacteria and dust having a high content of textile fibers. The contaminated fabrics were held in 35 or 78% relative humidities at 25° C. In general, the persistence time of *S. aureus* populations on fabrics held in 35% relative humidity was substantially longer when the fabrics were contaminated by exposure to aerosolized cultures or to dust containing bacteria than when contaminated by direct contact. In a 78% relative humidity bacterial populations on the fabrics persisted for substantially shorter periods of time regardless of the mode of contamination or fabric type. Cotton wash-and-wear fabric

## A69-80936

(treated with a modified triazone resin) was the material on which populations of *S aureus* persisted for the shortest time This organism retained its virulence for Swiss mice after being recovered from wool gabardine swatches held four wk in 35% relative humidity and six wk in 78% relative humidity

## A69-80936

### VACUUM-CLEANING SYSTEM FOR ISOLATION CHAMBERS

Charles E Yale (Wis U Med School Dept of Surg Madison)  
*Applied Microbiology*, vol 17 Feb 1969, p 291-292  
Grant PHS AI 06956

To encourage the utilization of the isolation chamber as a research tool, the cost of its use should be lowered Methods and devices must be developed which make more efficient use of the space within the isolator and allow the operator to work effectively in this confined area A simple vacuum-cleaning system is described it consists of a nozzle and flexible hose which connect through the isolator wall to an externally placed waste tank attached by way of its outlet filter to a source of vacuum The cylindrical waste tank [48 in (1 219 m) high and 36 in (0 914 m) in diameter] was sterilized in a large autoclave During a nine-month test period the system was used to remove soiled corncob bedding from a large isolator containing 90 adult monocontaminated rats During this period, the microbial flora of the isolator was unchanged, and the time required to clean the cages was reduced by 50% This vacuum-cleaning is a safe convenient and economical means of increasing the efficiency of an isolation chamber

## A69-80937

### SPORULATION, HEAT RESISTANCE, AND BIOLOGICAL PROPERTIES OF CLOSTRIDIUM PERFRINGENS

S Nishida N Seo and M Nakagawa (Kanazawa U School of Med Dept of Bacteriol, Japan)  
*Applied Microbiology*, vol 17, Feb 1969 p 303-309 23 refs

A sporulation medium for 134 *Clostridium perfringens* strains was devised according to Grelet's observation that sporulation occurred when cultural environment became limited in any nutritional requirement indispensable for the growth of the organism Sporulation took place most prominently when 10% cooked-meat broth (pH 7.2) containing 3% Proteose Peptone and 1% glucose was used for the preculture and 2% Poli Peptone medium (pH 7.8) was used for the subculture medium Sometimes, terminal spores could be observed A correlation between sporulation and heat resistance was examined by use of *C perfringens* strains isolated from samples heated at different temperatures Almost all strains isolated from unheated samples and from those heated at lower temperatures gave rise to spores in our sporulation medium but the spores were weakly heat resistant whereas strains isolated from samples heated at 100°C for 60 min were highly heat-resistant but sporulated poorly A majority of these heat-resistant strains were non-gelatinolytic and definitely salicin-fermenting

## A69-80938

### A SIMPLE TECHNIQUE OF UNDERWATER HARDWARE ECG RECORDING

I P Unsworth, J Williams and R Tayler (Roy Naval Physiol Lab Alverstoke Hants Great Britain)  
*Bio-Medical Engineering* vol 4 Feb 1969, p 74-76

A simple and reliable method of monitoring the heart of a working diver is described A continuous cable attached to a small electrocardiograph is used Recordings utilizing MRC silver discs were made in 100 ft of water A special technique for

attaching the electrodes which is critical to reliability is given The quality of the recordings is good in comparison to those of others taken under similar conditions

## A69-80939

### INHIBITION OF SHIGELLA FLEXNERI BY THE NORMAL INTESTINAL FLORA 2 MECHANISMS OF INHIBITION BY COLIFORM ORGANISMS

David J Hentges (Creighton U, School of Med Dept of Microbiol Omaha Neb)  
*Journal of Bacteriology*, vol 97, Feb 1969 p 513-517 15 refs  
Contract DA DA 17-67-C-0024 and Grant PHS AI-07148

Of 15 strains of coliform bacteria, all isolated from human feces 14 inhibited the growth of *Shigella flexneri* in mixed culture In every case when inhibition occurred exponential growth of *Shigella* was interrupted in the mixed culture and the organisms entered into either a stationary or a death phase None of the test coliform strains produced colicines active against *Shigella* An analysis of mixed-culture environments at the time *Shigella* inhibition occurred revealed that the inhibition was not due to nutrient depletion nor to the development of adverse pH or oxidation-reduction potentials in themselves In mixed culture the coliform strains produced formic and acetic acids in concentrations that inhibited *Shigella* growth With one exception the coliform strains also greatly reduced the culture medium In average concentrations produced the formic and acetic acids exerted a bactericidal effect on *Shigella* under the reduced conditions found in mixed cultures The acids were only moderately toxic for the coliform strains under the same conditions Results indicate that volatile acid production and concomitant reduction of the medium are the mechanisms by which coliform bacteria inhibit *Shigella* growth in mixed cultures

## A69-80940

### EFFECTS OF ANTICHOLINERGIC DRUGS ON EPILEPTIC ACTIVITY FROM AMYGDALA AND FRONTAL CORTEX

C J Vas J M R Delgado and G H Glaser (Yale U School of Med Dept of Psychiat Sect of Neurol New Haven Conn)  
*Neurology*, vol 19, Mar 1969, p 234-241 19 refs  
Grants NONR 609(48) PHS 5-P02-NB-06208 PHS M 2004 and AF F/29600-67-C-0058

A comparative study of effects of the anticholinergic drugs hyosine methixene and procyclidine on epileptic activity from amygdala and frontal cortex was undertaken in five monkeys Electrodes were implanted into the amygdalae and frontal cortices for both stimulation and recording During the course of controlled experiments the intensity of current required to produce electrical after-discharges (EAD) was determined in addition to the duration of the EAD at both the amygdala and cortical sites Hyosine (1.5 mg/kg) methixene (4 mg/kg), and procyclidine (10 mg/kg) prolonged the duration of cortical EAD to a significant extent whereas normal saline had no such effect These large doses of the anticholinergic drugs however had no effect on the threshold current required to produce cortical EAD Smaller doses of hyosine (0.75 mg/kg), methixene (2 mg/kg) and procyclidine (5 mg/kg) had no statistically significant effect on the threshold current or duration of cortical EAD The drugs had no significant effect on either threshold or duration of amygdala EAD

## A69-80941

### OBJECTIVE EVALUATION OF JOINT SENSE AND TOUCH IN THE HUMAN

E Rodin S Wasson and J Porzak (Lafayette Clin Neurol Res Div Detroit Mich)

*Neurology* vol 19 1969 p 247-257 8 refs

*Am Acad of Neurol, Ann Meeting, Chicago Apr 1968*

Passive movement of the index finger at the metacarpophalangeal joint resulted in detectable cerebral-evoked responses in ten normal male volunteer subjects when averaging techniques were used. The response had the following main characteristics: (1) it was present ipsilaterally as well as contralaterally to the stimulated finger with the contralateral response being distinctly higher in amplitude; (2) it was higher in amplitude in the connections between the anterior to posterior parietal areas than in the connections between the premotor and anterior parietal regions; (3) the right hemisphere gave higher responses to stimulation of the left finger than the left hemisphere to movement of the right finger; and (4) the evoked response from the premotor to anterior parietal regions showed greater complexity than the response from the anterior parietal to posterior parietal regions. Touch-evoked responses were similar to joint movement-evoked responses but had lower amplitudes. Median nerve stimulation at the wrist produced a similar evoked response curve as joint movement did except for the early components (between 20 and 40 msec) which were markedly higher when median nerve stimulation was used. Examples of alterations of the joint movement-evoked response due to various lesions of the central nervous system were presented.

#### A69-80942

##### DIRECTION OF MOVEMENT AS THE SIGNIFICANT STIMULUS PARAMETER FOR SOME LATERAL GENICULATE CELLS IN THE RAT

Vicente M Montero and John F Brugge (Wis. U Lab of Neurophysiol, Madison)

*Vision Research*, vol 9 Jan 1969 p 71-88 27 refs

Grants NIH NB-03640, NIH NB-03641 NIH NB-06225 and NIH NB-05326

Directional neurons in rat dorsal lateral geniculate nucleus responded maximally to images moving in one direction opposite movement evoked no spikes and often suppressed spontaneous activity. Asymmetry in the directional response was independent of stimulus size, shape contrast and, within a range velocity. Directional responses were obtained about 45° on either side of the preferred null axis. On-off responses were evoked throughout the receptive field. Inhibition acts in the null direction and facilitation in the preferred direction. Receptive fields occurred throughout the visual field. 52% grouped in a region just nasal to the projection of the optic disc.

#### A69-80943

##### AUTOKINESIS AND THE PERCEPTION OF MOVEMENT THE PHYSIOLOGY OF ECCENTRIC FIXATION

R A Crone and H F E Verduyn Lunel (Wilhelmina Gasthuis U Eye Clin Amsterdam The Netherlands)

*Vision Research*, vol 9, Jan 1969, p 89-101 27 refs

An after-image method was devised by means of which the average direction of fixation could be measured to within one min of arc. During autokinesis fixation was found to lag behind the apparent movement. When a stationary target appeared to move during optokinetic stimulation the mean eccentricity of fixation was one and one-half min of arc. Tracking a point of light which was really moving showed again that the fixation lagged behind the movement. The eccentricity of fixation was dependent upon the

speed of the real movement. If, at very low speed, the mean eccentricity was less than one min of arc real movement could not be distinguished from autokinesis. During fixation of a point of light in the dark the mean eccentric fixation is the physiological correlate of the perception of movement and also the quantitative stimulus to tracking movements of the eye.

#### A69-80944

##### MONOCULAR ESTIMATES OF DISTANCE AND DIRECTION WITH STABILIZED AND NON-STABILIZED RETINAL IMAGES

David S Gilbert (Calif Inst of Technol Biol Dept, Pasadena)

*Vision Research*, vol 9 Jan 1969 p 103-115 29 refs

Grants NIH NB 03627 and NIH GM 01335

Using both stabilized and non-stabilized retinal images two subjects tried to match distances and angles defined by bright coplanar points about 2° apart in order to determine whether or not eye movements help the usual system determine distances. Within an experimental uncertainty of ± two min arc, or 3% of the distances to be matched both subjects carried out matches as accurately with a stabilized image as with a non-stabilized image. Further, with a stabilized image the distance and direction of a retinal point from the fovea were estimated with approximately the same accuracy as the point's distance and direction from another non-foveal point. These results indicate that accurate spatial estimates may be obtained from extra-foveal area of the retina and that eye movements do not improve the accuracy of spatial judgments.

#### A69-80945

##### OPTOKINETIC EYE MOVEMENTS IN THE RABBIT INPUT-OUTPUT RELATIONS

H Collewijn (Rotterdam Med Fac, Dept of Physiol The Netherlands)

*Vision Research* vol 9 Jan 1969 p 117-132 9 refs

Slow phase velocities of optokinetic eye movements due to constant rotation or sinusoidal movement of surroundings were measured under normal and open loop conditions. Speeds from 0.03 to 1°/sec were followed with a closed loop gain of 0.7 to 0.9. Higher eye speeds were reached at an acceleration of no more than 1°/sec<sup>2</sup> and lower gain. Open loop gain was better than 10 for stimulus velocities up to 0.1°/sec. Phase lag in sinusoidal movement was very small even at low gain. No evidence for a genuine position servo was found.

#### A69-80946

##### THE MONOCULAR EYE MOVEMENTS OF THE PIGEON

Patrick W Nye (Calif Inst of Technol Div of Appl Sci, Pasadena)

*Vision Research*, vol 9 Jan 1969 p 133-144 17 refs

Grant PHS NB 03627

The monocular eye movements of both restrained and partially restrained pigeons were measured by means of a mirror attached to the edge of the cornea. The principal observations may be summarized under the following categories: (1) *Flicks* or eye movements which bring about a rapid change of fixation are found to occur only in response to sudden and unexpected motion of a visual stimulus and are rarely observed under the quiescent conditions of a darkened room; (2) *Drifts* which are slower movements of the eye between fixation points, occur at velocities of about 1° to 5°/sec and are stimulated by object motion; (3) *Tremor* motion is of extremely low amplitude and is unlikely to serve any visual function; and (4) *Oscillations* occur in short bursts

**A69-80947**

at frequencies of about 30 Hz and amplitudes of several degrees. The evidence indicates that this eye movement is normally executed during a blink and it is probable that it performs a polishing action on the cornea in conjunction with the nictitating membrane. The observations lead to the conclusion that although the range of rotational motion available to the pigeon is less than in man it nevertheless possesses a well developed and precisely controlled oculomotor system which appears in some respects to out-perform our own.

**THEORY OF STEREOSCOPIC SHADOW-CASTER AN INSTRUMENT FOR THE STUDY OF BINOCULAR KINETIC SPACE PERCEPTION**

David N Lee (Harvard Med School, Boston, Mass)  
*Vision Research*, vol 9, Jan 1969, p 145-156 6 refs

Contract Nonr-1866(52) and Boston City Hosp supported research

The stereoscopic shadow-caster is a simple and versatile instrument for the study of binocular stereopsis under kinetic viewing conditions for objects in the stereoscopic scene can be easily moved either by the experimenter or the observer and the observer can move and interact with them. Thus the instrument is suitable for use with human infants and animals as well as adult subjects. This paper presents the theory of the instrument necessary for its research use, discusses the application of this theory to photographic stereoscopic projection and describes the perceptual effects of the stereoscopic transformation. In addition some current research applications and modifications of the instrument are described.

**A69-80948**

**A SPATIAL INTEGRATION EFFECT IN VISUAL ACUITY**

J M Findlay (J J Thomson Phys Lab, Reading, Great Britain)  
*Vision Research*, vol 9, Jan 1969, p 157-166 12 refs  
Grant MRC G/964/278/B

The effect of grating size on the threshold for a 30 cycle per degree grating pattern is investigated for various colors of illumination and target orientations. It is shown under certain conditions that the threshold decreases as the target size is increased and this is attributed to spatial integration of information.

**A69-80949**

**THE EFFECT OF BACKGROUND DENSITY ON THE ZOLLNER ILLUSION**

G K Wallace and D J Crampin (Reading U, Great Britain)  
*Vision Research*, vol 9, Jan 1969, p 167-177 18 refs

The Zollner illusion consists in the distortion of two parallel lines when superimposed on a background of oblique intersecting lines. The size of the illusion was measured for intersect angles 2 to 45° with pattern density constant. The angle distortion is maximum at 20° and declines to either side of this value. Different explanations for this are considered and predictions made as to how different pattern densities should affect the function. The illusion was measured for two pattern densities over the range 2 to 20°. The results show that increasing the pattern simply multiplies the entire illusion function by a constant. These measurements are an important first step before forming any theory of the illusion.

**A69-80950**

**VISUAL SUPPRESSION DURING SMOOTH FOLLOWING AND SACCADIC EYE MOVEMENTS**

A Starr R Angel and H Yeates (Stanford U, School of Med, Div of Neurol and Veterans Admin Hosp, Palo Alto Calif)  
*Vision Research* vol 9, Jan 1969, p 195-197 13 refs  
Grant NINDB NB 31242

Four young ladies with normal vision tracked a slowly moving target and pressed a button whenever a light flashed during the tracking task. The intervals of flashing were three to ten sec. Detection of the light flash was affected differently by the saccadic eye movement (SEM) or the smooth following movements (SFM). The probability of detection during SFM was greater than 85%. If the flash occurred near a SEM, detection was greatly reduced at threshold intensity. A possible explanation for this difference may be that neural mechanisms initiating SEM affect structures processing visual information and influence perception.

**A69-80951**

**VISUAL BACKWARD MASKING OF A SINGLE LINE BY A SINGLE LINE**

Mary B Parlee (Mass Inst of Technol, Dept of Psychol, Cambridge)

*Vision Research* vol 9, Jan 1969, p 199-205 8 refs

NASA Grant NsG 496 and Natl Defense Educ Act supported research

The detectability of a single target line was determined under conditions in which control of the contour relationship between the lines was maintained. This was the amount of overlapping and non-overlapping contours of the two lines. In experiment I the angle of the masking line to the vertical target line was the variable. In experiment II overlap affecting detectability was determined and in experiment III the effect of a non-overlapping masking line at various distance on detectability was determined. In the results the masking effect seemed to decrease rapidly with an increasing angle and tapers off out to 90°. As overlap decreased detectability increased which showed that as the masking line caused less excitation of the target line receptor, the target line effect became more detectable. Experiment III indicated that with increasing separation between non-overlapping contours of the target and masking lines detectability increased. Underlying physiological bases for these results were discussed.

AEROSPACE MEDICINE AND BIOLOGY / a continuing bibliography

JUNE 1969

## Typical Subject Index Listing

A Notation of Content rather than the title of the document appears under each subject heading it is listed under several headings to provide multiple access to the subject content. The accession number is located beneath and to the right of the Notation of Content e.g. N69-12345. Under any one subject heading the accession numbers are arranged in sequence.

## A

- ABERRATION**

SUBJECT INDEX

BEDS PROCESS ENGINEERING

- DISCRIMINATION OF REPEATED AUDITORY PATTERNS OF PULSED DOPPLER SEQUENCES A69-80792
- CORTICAL SLOW POTENTIAL CHANGES IN MAN RELATED TO INTERSTIMULUS INTERVAL AND TO PRETRIAL PREDICTION OF INTERSTIMULUS INTERVAL A69-80832
- STIMULUS DETECTION DURING PERIODS OF HIGH AND LOW HEART RATE A69-80837
- HABITUATION OF ORIENTING RESPONSE TO MULTIPLE STIMULUS SEQUENCES A69-80838
- EFFECTS OF COSTS AND VALUES ON SIGNALS FOR AUDITORY VIGILANCE BEHAVIOR A69-80905
- AUDITORY TASKS**
- HUMAN INFORMATION PROCESSING RATES DURING ONE AND TWO AXIS COMPENSATORY TRACKING TASKS WITH SECONDARY AUDITORY TASK A69-23880
- COUPLING EFFECTS AND PERFORMANCE IN AUDITORY AND VISUAL VIGILANCE TASKS AD-680912 N69-20236
- AUTOKINESIS**
- EXPLANATION OF AUTOKINETIC ILLUSION BASED ON DEFINITION OF EYE-POSITION SUPPORTING DISPLACEMENT CONCEPT OF MOTION A69-80794
- AUTOKINESIS AND PERCEPTION OF MOVEMENT - PHYSIOLOGY OF ECCENTRIC FIXATION A69-80943
- AUTOMATA THEORY**
- OUTPUT ESTIMATES FOR AUTOMATA AND OPTIMIZATION OF LEARNING MACHINES WITH UNEQUAL INPUTS JPRS-47617 N69-21232
- RECOGNITION ESTIMATES FOR TERMINAL STATE OF AUTOMATA N69-21233
- AUTOMATIC CONTROL**
- ELECTROOCULOGRAPHIC METHOD TO STUDY EYE MOVEMENTS CONTROL SYSTEM FOR FIXATION ON STATIONARY POINT OR FOLLOWING DISCRETELY OR CONTINUOUSLY MOVING TARGET A69-22675
- AUTONOMIC NERVOUS SYSTEM**
- NEUROLOGICAL CHANGES IN MEN DUE TO HYPOKINESIA, ANALYZING TREMOR DATA, EEG RECORDINGS AND STABILOGRAPHY FLUCTUATIONS A69-23585
- AUTOPSIES**
- TOXIC EFFECTS OF FLUORINE FOLLOWING SHORT TERM INHALATION BY ANIMALS AND HUMANS NASA-CR-100415 N69-20915
- AXIAL FLOW PUMPS**
- PERFORMANCE AND CAVITATION DAMAGE TO AXIAL FLOW PUMP ROTOR BLADES IN HIGH TEMPERATURE LIQUID SODIUM NASA-TN-D-5138 N69-21773
- AZOTOBACTER**
- POLY A-POLY U SYNTHESIZED BY AZOTOBACTER VINELANDI RNA POLYMERASE IN UNPRIMED REACTION CONTAINING ATP AND UTP, FOLLOWING SHORT LAG PERIOD A69-24185
- MODEL OF NITROGEN FIXATION SYSTEM TO STUDY DEPENDENCE OF HYDROGEN LIBERATION ON TEMPERATURE IN CELL-FREE CULTURES OF AZOTOBACTER VINELANDII A69-80862
- B**
- BACKGROUND RADIATION**
- MEASUREMENT OF GAMMA EXPOSURE RATE IN NATURAL RADIATION ENVIRONMENT BY SPECTROMETRY RT/FI/68/54 N69-20987
- BACTERIA**
- SEMI-QUANTITATIVE TOTAL BODY SKIN CULTURE TECHNIQUE FOR PATIENTS IN PROTECTED ENVIRONMENT A69-80914
- SPORULATION, HEAT RESISTANCE AND METABOLIC PROPERTIES OF CLOSTRIDIUM PERFRINGENS A69-80937
- MECHANISM OF INHIBITION OF SHIGELLA FLEXNERI BY COLIFORM BACTERIA IN NORMAL HUMAN INTESTINE A69-80939
- METABOLIC CHARACTERISTICS OF BACTERIA PRESENT IN ACTIVATED SLUDGE OF CLOSED ECOLOGICAL SYSTEMS AD-681126 N69-20667
- EFFICIENCY OF GROWTH BY HYDROGEN BACTERIA AND GROWTH RATE LIMITING FACTORS ON EFFICIENCY OF ENERGY CONVERSION NASA-CR-100417 N69-20885
- DAILY FREEZING, THAWING CYCLES, AND ULTRAVIOLET IRRADIATION EFFECTS ON BACTERIA SURVIVAL NASA-CR-100503 N69-21349
- BACTERIOLOGY**
- HYDROGENOMONAS EUTROPHA AS MEANS OF PROTEIN FOOD SOURCE INDEPENDENT OF CONVENTIONAL AGRICULTURE FOR ANIMAL FEED SUPPLEMENT A69-23306
- BACTERIOPHAGES**
- EFFECT OF VARIOUS STORAGE AND AIRBORNE ENVIRONMENTS ON STABILITY OF T3 COLIPHAGE A69-80934
- DOUBLE STRANDED BACTERIOPHAGE DNA FORMATION TDCK-52607-III N69-21344
- BALLOUT**
- OCULAR INJURIES DURING BAILOUT FROM VAMPIRE AIRCRAFT, NOTING HEMORRHAGES A69-23380
- BALANCING**
- EFFECTS OF PULSED IONIZING RADIATION ON MONKEYS IN EQUILIBRIUM PLATFORM TASK AD-680748 N69-20361
- BALLISTIC TRAJECTORIES**
- PSYCHOMOTOR REACTION TIME AND MOTIONS, MYOGENIC TONUS AT REST AND PRECISION OF MONKEYS DURING ROCKET FLIGHTS ALONG BALLISTIC CURVE, NOTING WEIGHTLESSNESS EFFECT A69-23575
- BALLISTOCARDIOGRAPHY**
- AMPLITUDE VARIATIONS IN ULF BALLISTOCARDIOGRAMS OF YOUNG NORMAL AIRLINE STEWARDESSES AND APPLICANTS, DISCUSSING CARDIOVASCULAR REACTIVITY A69-22544
- BANDWIDTH**
- SPECTRAL LIGHT REQUIREMENTS OF ALGAE GROWTH EXPERIMENTALLY DETERMINED WITH VARIOUS SPECIES AD-680972 N69-20251
- BEARING (DIRECTION)**
- DIRECTION OF SIGHT LINE FOR DIFFERENT ACCOMMODATIVE RESPONSES IN HUMANS A69-80800
- BED REST**
- PROLONGED BED REST EFFECT ON HUMAN MYOGENIC TONUS AND PROPRIOCEPTIVE REFLEXES, COMPARING TEST SUBJECTS WITH AND WITHOUT PHYSICAL EXERCISES A69-23583
- COMBINED EFFECT OF PROLONGED BED REST AND ACCELERATION EXPOSURE ON HUMAN BLOOD CIRCULATION, NOTING INCREASED HEART RATE AND ARTERIAL BLOOD PRESSURE A69-23584
- NEUROLOGICAL CHANGES IN MEN DUE TO HYPOKINESIA, ANALYZING TREMOR DATA, EEG RECORDINGS AND STABILOGRAPHY FLUCTUATIONS A69-23585
- BED REST EFFECT ON ORTHOSTATIC TOLERANCE OF PATIENTS WITH ACUTE MYOCARDIAL INFARCTION AND WITHOUT HEART FAILURE A69-24189
- BEDS (PROCESS ENGINEERING)**
- DIGITAL COMPUTER PROGRAM FOR HEAT AND MASS TRANSFER CHARACTERISTICS OF SPACECRAFT CARBON DIOXIDE ADSORPTION BEDS, DISCUSSING SURFACE PRESSURE OF ABSORBENT MATERIAL AICHE PAPER 19C A69-21931

**BEHAVIOR**

**SUBJECT INDEX**

**BEHAVIOR**

HYPOTHALAMIC MOTIVATIONAL SYSTEMS AND STIMULATION, DISCUSSING BEHAVIOR PATTERNS AND PLASTICITY  
A69-21310

MONKEY BEHAVIOR IN HIGH ATMOSPHERE UNDER WEIGHTLESS CONDITIONS, DISCUSSING PROBLEMS CONNECTED WITH BIOLOGICAL MEASUREMENTS, LOGIC SYSTEMS AND VIBRATION PROTECTION  
A69-22722

STIMULUS GENERALIZATION OF GRAVITY IN SQUIRREL MONKEYS  
A69-80807

DOSAGE AND TIME EFFECTS OF CIGARETTE SMOKING ON CATECHOLAMINE EXCRETION AND BEHAVIOR  
A69-80926

BEHAVIORAL AND CIRCULATORY RESPONSE TO X RAY IRRADIATION IN MONKEYS  
AD-680843 N69-20138

**BELLOWS**

COMPACT BELLOWS SPIROMETER FOR HIGH SPEED AND HIGH ALTITUDE SPACE TRAVEL  
NASA-CASE-XAR-01547 N69-21473

**BENZENE POISONING**

EVALUATION OF PROLIFERATIVE AND MATURATIVE ACTIVITY ON RABBIT BONE MARROW DURING BENZENE INTOXICATION  
A69-80759

**BIBLIOGRAPHIES**

HEAT AND HUMIDITY ENDURANCE LIMITS IN MAN  
A69-23494

ANNOTATED BIBLIOGRAPHY AND INDEXES ON AEROSPACE MEDICINE AND BIOLOGICAL EFFECTS - FEB. 1969  
NASA-SP-7011/60/ N69-19714

**BINOCULAR VISION**

BRIGHTNESS DETERMINATION IN DARK-ADAPTED HUMANS VIEWING WHITE LIGHT BINOCULARLY  
A69-80791

STEREOSCOPIC SHADOW-CASTER - THEORY OF INSTRUMENT FOR STUDYING BINOCULAR KINETIC SPACE PERCEPTION  
A69-80947

**BIOASSAY**

TECHNOLOGY FEASIBILITY SPACECRAFT / TFS/ STERILIZATION AND BIOASSAY PROGRAM DURING ASSEMBLY, ANALYZING SAMPLING AND CLEANING PROCEDURES  
A69-22358

**BIOASTRONAUTICS**

CLINICAL REPORT ON APOLLO 7 AND 8 MISSION MEDICAL DATA, DISCUSSING PREFLIGHT PREVENTIVE MEDICAL ACTIVITIES, INFIGHT TREATMENT, RADIATION LEVELS, ETC  
A69-22542

AUTOMATIC COMPUTER PROCESSING OF PHYSIOLOGICAL DATA DURING SPACE FLIGHTS, DISCUSSING CHOICE OF COMPUTERS AND COMPUTER PROGRAMS  
A69-23509

DISCUSSION ON ADVANTAGES OFFERED BY UTILIZATION OF PRIMATES IN SPACE RESEARCH  
A69-80892

ANNOTATED BIBLIOGRAPHY AND INDEXES ON AEROSPACE MEDICINE AND BIOLOGICAL EFFECTS - FEB. 1969  
NASA-SP-7011/60/ N69-19714

**BIOCHEMISTRY**

HYPOTHERMIA INDUCED ALTERATIONS IN BIOCHEMICAL PROCESSES STUDIED WITH ISOLATED RAT LIVER PERFUSED AT LOW TEMPERATURE  
A69-23119

STRUCTURE AND FUNCTION OF BRAIN  
NASA-TT-F-12210 N69-20199

**BIODYNAMICS**

MUSCULAR MECHANICS IN HUMAN EYE MOVEMENTS  
A69-80877

**BIOELECTRIC POTENTIAL**

EVOKED POTENTIALS TO SOUNDS OF DIFFERENT DIRECTIONS IN AUDITORY CORTEX OF CATS  
A69-80810

EVOKED POTENTIALS IN HUMAN BRAIN DURING SLEEP AND CHANGED STATES OF ATTENTION BY PHOTIC STIMULATION  
A69-80811

CORRELATION BETWEEN BRAIN ELECTRICAL ACTIVITY AND CHANGES IN ENVIRONMENTAL OXYGEN TENSIONS IN RATS DURING HYPOTHERMIA  
A69-80854

ELECTRONIC SUMMATING TECHNIQUES FOR RECORDING ORTHODROMIC HUMAN SURAL NERVE ACTION POTENTIALS  
A69-80886

EVOKED POTENTIALS OF CORTEX INDUCED BY JOINT MOVEMENT - COMPARISON TO THOSE OF ELECTRICAL STIMULATION AND TOUCH AND RELATION TO NORMAL ELECTROENCEPHALOGRAM  
A69-80941

ACTIVITY OF CELLS IN LATERAL GENICULATE NUCLEUS IN RESPONSE TO DIRECTION OF MOVEMENT OF STIMULUS IN RATS  
A69-80942

ELECTROCHEMICALLY REVERSIBLE SILVER-SILVER CHLORIDE ELECTRODE FOR DETECTING BIOELECTRIC POTENTIAL DIFFERENCES GENERATED BY HUMAN MUSCLES AND ORGANS  
NASA-CASE-XMS-02872 N69-21925

**BIOINSTRUMENTATION**

ENGINEERING PROBLEMS SURVEY ON TELEOPERATOR CONTROL SYSTEMS  
NASA-SP-5070 N69-21478

**BIOLOGICAL EFFECTS**

RADIOLOGICAL PROTECTION PROBLEMS OF TRITIUM  
NP-TR-1703 N69-19626

BIOLOGICAL EFFECTS OF MAGNETIC FIELDS  
N69-19845

**BIOLOGICAL EVOLUTION**

EXPERIMENTAL RESEARCH CONCERNED WITH ORIGIN OF LIFE, STUDYING SYNTHESIS OF PRECURSOR POLYMERS AND SELF ASSEMBLY INTO PROTOCELLS  
A69-23035

AXIOMATIC EXPLANATION OF COMPLETE SELF REPRODUCTION, NOTING LOGICAL MATHEMATICAL BIOLOGICAL REASONING AND EVOLUTION THEORIES  
A69-23385

SIMULATED WEIGHTLESSNESS USED IN DETERMINING ONTOGENESIS OF OTOLITH ORGAN IN TADPOLES AND EGGS AS FUNCTION OF ACCELERATION FORCES  
DVL-855 A69-24021

**BIOLOGY**

PREREQUISITES FOR CHEMICAL THERMODYNAMIC MODELS OF LIVING SYSTEMS  
AD-680760 N69-20585

**BIOMETRICS**

BLOODLESS HEART FLOW MEASUREMENT METHODS, NOTING SIMULTANEOUS EXTERNAL RECORDING OF CAROTID AND FEMURAL PULSES AND IMPEDANCE PLETHYSMOGRAPHY  
A69-22730

NEUROLOGICAL CHANGES IN MEN DUE TO HYPOKINESIA, ANALYZING TREMOR DATA, EEG RECORDINGS AND STABILOGRAPHY FLUCTUATIONS  
A69-23585

ARTERIAL TONE AND HUMAN MUSCULAR ACTIVITY LIMITATIONS, ANALYZING HYPODYNAMIC EFFECTS ON AORTA, ARM AND LEG VESSELS CONSTRICTION  
A69-23586

**BIONICS**

MATHEMATICAL MODEL OF CLOSED BIOLOGICAL CYCLE REGENERATING PART OF LIFE SUPPORT PRODUCTS, INCORPORATING ASTRONAUT, STORAGE AND REGENERATING WASTE DISPOSAL UNITS  
A69-23580

ADAPTIVE CHANGES IN REACTIVITY AND WALL/LUMEN RATIO IN CAT BLOOD VESSELS EXPOSED TO PROLONGED TRANSMURAL PRESSURE DIFFERENCE AND INTRA-ARTERIAL NOREPINEPHRINE INFUSION  
A69-80757

PREREQUISITES FOR CHEMICAL THERMODYNAMIC MODELS OF LIVING SYSTEMS  
AD-680760 N69-20585

- BIOSYNTHESIS**  
TEMPERATURE EFFECT ON VOLATILE ACID CONTENT IN SEEDS AND LEAVES OF OIL-BEARING PLANTS NASA-TT-F-12125 N69-19646
- BIOTELEMETRY**  
BIOTELEMETRY SYSTEM FOR ONBOARD MEDICAL INFORMATION PROCESSING DURING MANNED SPACE FLIGHT JPRS-47607 N69-20912
- BLOOD**  
REGIONAL UPTAKE OF MELATONIN FROM BLOOD OR CEREBROSPINAL FLUID BY RAT BRAIN A69-21466  
CORRELATION BETWEEN VARIATIONS OF BLOOD AND PSEUDOCHELINESTERASE IN SKIERS AND PHYSICAL WORKLOAD PERFORMED A69-80814  
VARIATIONS IN BLOOD SERUM LIPIDS IN MAN IN RELATION TO MENTAL STRESS AND REGULAR PRACTICE OF PHYSICAL ACTIVITIES A69-80864  
ALTITUDE ACCLIMATIZATION AND BLOOD RESPONSE IN WOMEN A69-80876  
BLOOD OXYGEN MEASUREMENT BY OXYGEN TENSION MEASURED AFTER CARBON MONOXIDE RELEASE A69-80889
- BLOOD CIRCULATION**  
COMBINED EFFECT OF PROLONGED BED REST AND ACCELERATION EXPOSURE ON HUMAN BLOOD CIRCULATION, NOTING INCREASED HEART RATE AND ARTERIAL BLOOD PRESSURE A69-23584  
CIRCULATION AND RESPIRATION DURING PHYSICAL WORK WHILE USING PROTECTIVE OXYGEN MASK A69-80753  
BALANCED FIELD-TYPE ELECTROMAGNETIC FLOWMETER WHICH PERMITS MEASUREMENTS OF SEVERAL BLOOD FLOWS SIMULTANEOUSLY WITHOUT BASE-LINE SHIFT OR SIGNAL DISTORTION A69-80780  
VALIDATION OF METHOD FOR BLOOD FLOW IN ADIPOSE TISSUE OF RATS BY CLEARANCE OF RUBIDIUM 86 A69-80784  
CONTINUOUS MEASUREMENTS OF ARTERIAL FLOW IN HUMANS WITH AND WITHOUT HEART DISEASE DURING ATRIAL AND VENTRICULAR ARRHYTHMIAS A69-80803  
VARIATIONS IN FUNCTIONAL STATE OF ARTERIES IN DIFFERENT PARTS OF HUMAN BODY DURING PHYSICAL EXERCISE AT SEA LEVEL AND AT HIGH ALTITUDES A69-80858  
VENOUS BLOOD FLOW IN ILIAC AND RELATION TO PHYSICAL EXERCISE AND LACTATE PRODUCTION IN MAN A69-80884
- BLOOD COAGULATION**  
LASER ENERGY RADIATION EFFECTS ON TISSUE CULTURE CELLS AD-680946 N69-20260  
MATHEMATICAL THEORY OF BLOOD CLOTTING AD-681517 N69-21636
- BLOOD FLOW**  
HEMODYNAMIC EFFECTS OF CHANGES IN BLOOD VOLUME DURING INTERMITTENT POSITIVE-PRESSURE VENTILATION A69-80818
- BLOOD PLASMA**  
MONOMETHYLHYDRAZINE / MMH/ TOXIC EFFECTS ON CORNEA AND BLOOD AQUEOUS BARRIER STUDIED IN VIVO ON DOGS A69-22547  
REPEATED BLOOD SAMPLING EFFECT ON PLASMA CHOLINESTERASE, ACID PHOSPHATASE, ALKALINE PHOSPHATASE AND HEMATOCRIT RATIOS IN DOMESTIC CHICKENS A69-23158  
SIMULTANEOUS MEASUREMENT OF BLOOD PARAMETERS USING RADIOCHROMIUM LABELED RED CELLS AND RADIOIRON
- LABELED PLASMA AD-682287 N69-21904
- BLOOD PRESSURE**  
BLOOD PRESSURE FLUCTUATIONS IN MULTIPLE EXTRA SYSTOLES DURING TILT TABLE STUDIES FOR FLYING FITNESS OF PILOT A69-23379  
DOGS ORTHOSTATIC TOLERANCE AND RESISTANCE TO TRANSVERSE ACCELERATION AFTER 14-DAY HYPODYNAMIA, STUDYING TACHYCARDIA AND ARTERIAL PRESSURE A69-23499  
BED REST EFFECT ON ORTHOSTATIC TOLERANCE OF PATIENTS WITH ACUTE MYOCARDIAL INFARCTION AND WITHOUT HEART FAILURE A69-24189  
ADAPTIVE CHANGES IN REACTIVITY AND WALL/LUMEN RATIO IN CAT BLOOD VESSELS EXPOSED TO PROLONGED TRANSURAL PRESSURE DIFFERENCE AND INTRA-ARTERIAL NOREPINEPHRINE INFUSION A69-80757  
INSTANTANEOUS PERIPHERAL VASCULAR RESISTANCE CHANGES CAUSED BY CRITICAL CLOSING PHENOMENON IN DOGS A69-80882  
CHANGES IN BLOOD PRESSURE OF TRAINED AND UNTRAINED SUBJECTS DURING EXERCISE AT VARIOUS ALTITUDES A69-80902
- BLOOD VESSELS**  
SMALL EYE MOVEMENTS MEASUREMENT AND RETINAL IMAGE STABILIZATION BASED ON TRACKING EDGE OF BLOOD VESSEL IN OPTIC DISK A69-21908  
ARTERIAL TONE AND HUMAN MUSCULAR ACTIVITY LIMITATIONS, ANALYZING HYPODYNAMIC EFFECTS ON AORTA, ARM AND LEG VESSELS CONSTRICTION A69-23586
- BLUE GREEN ALGAE**  
GAS VACUOLES DEVELOPMENT IN BLUE GREEN ALGAE BY CELL TRANSFER FROM DEFINED MEDIUM TO DISTILLED WATER A69-23184
- BLUNT BODIES**  
FLOW CALCULATION AROUND BLUNTED CONES FOR SUPERSONIC STREAM OF AIR USING METHOD OF CHARACTERISTICS AD-681268 N69-20441
- BODY KINEMATICS**  
DOGS ORTHOSTATIC TOLERANCE AND RESISTANCE TO TRANSVERSE ACCELERATION AFTER 14-DAY HYPODYNAMIA, STUDYING TACHYCARDIA AND ARTERIAL PRESSURE A69-23499  
HYPOKINESIA EFFECTS ON HUMAN NEUROLOGY ON EXTENDED SPACE FLIGHTS SIMULATED BY 72-DAY BED REST A69-23506  
SPACE FLIGHT HYPOKINESIA SIMULATION EXPERIMENTS TO STUDY OXYGEN BALANCE IN MAN A69-23507  
HYPOKINESIA EFFECT ON DYNAMICS OF METABOLIC PROCESSES IN ATHLETES MUSCULAR SYSTEM BY COMPARISON OF DIURESIS, CREATININE EXCRETION AND CUTANEOUS FAT LAYER INDICES A69-23582
- BODY TEMPERATURE**  
LEARNED BEHAVIOR PERFORMANCE FAILURE IN HYPOTHERMIA AS TEMPERATURE DEPENDENT PHENOMENON USING RAT, GUINEA PIG, CHINCHILLA, MOUSE, GERBIL AND HAMSTER A69-23124  
HUMAN BODY TEMPERATURE REGULATING FACTORS IN LOW TEMPERATURE ENVIRONMENT, STUDYING METABOLISM, LUNG VENTILATION AND ONSET OF SHUDDERING A69-23298  
HAMSTERS RESPONSES TO HELIUM-OXYGEN AND NITROGEN-OXYGEN AT AMBIENT TEMPERATURES, COMPARING RESPIRATION RATES, WEIGHTS AND BODY TEMPERATURES A69-23564  
CORRELATION BETWEEN BODY TEMPERATURE AND OXYGEN CONSUMPTION VARIATIONS IN NORMAL AND FURLESS RABBITS IN INITIAL PERIODS OF ADAPTATION TO

**BODY WEIGHT**

**SUBJECT INDEX**

MODERATELY LOW TEMPERATURE ENVIRONMENT  
A69-80859

RELATIONSHIP BETWEEN EFFICIENCY DURING MENTAL  
TASKS AND CIRCADIAN RHYTHM OF BODY TEMPERATURE  
AFFECTED BY CHANGE IN WORK-REST CYCLE  
A69-80929

**BODY WEIGHT**  
HAMSTERS RESPONSES TO HELIUM-OXYGEN AND NITROGEN-  
OXYGEN AT AMBIENT TEMPERATURES, COMPARING  
RESPIRATION RATES, WEIGHTS AND BODY TEMPERATURES  
A69-23564

HEAT TOLERANCE OF EXERCISING OBESE AND LEAN  
WOMEN WHILE EXPOSED TO SIX DIFFERENT  
ENVIRONMENTAL TEMPERATURES  
A69-80771

**BONE MARROW**  
EFFECT OF MEDULLARY AUTOTRANSPLANTATION ON  
SURVIVAL OF MICE EXPOSED TO VARIOUS DOSAGE OF  
IONIZING RADIATION  
A69-80863

EFFECT OF GRAVITATION AND WEIGHTLESSNESS ON BONE  
MARROW STRUCTURE IN VERTEBRATES  
A69-80865

**BONES**  
SHORT AND EXTENDED COLD EXPOSURE EFFECTS ON  
SKELETAL METABOLISM IN RATS  
A69-80874

SURVEY OF STRONTIUM 90 CONTENT OF HUMAN BONES  
COLLECTED IN PARIS AREA  
CEA-R-3681  
N69-20639

**BRADYCARDIA**  
ELECTROCARDIOGRAPHIC T-WAVE CHANGES RELATED TO  
BRADYCARDIA IN HEALTHY INDIVIDUALS, DISCUSSING T-  
WAVE INVERSION IN PEOPLE WITH VAGOTONIA  
A69-22557

**BRAIN**  
REGIONAL UPTAKE OF MELATONIN FROM BLOOD OR  
CEREBROSPINAL FLUID BY RAT BRAIN  
A69-21466

COMPUTER ANALYSIS OF CORTICAL AND SUBCORTICAL  
ACTIVITY IN YELLOW BELLED MARMOT DURING SLEEP,  
HIBERNATION AND HYPOTHERMIA  
A69-23122

EPINEPHRINE FORMING ENZYME PHENYLETHANOLAMINE- N-  
METHYL TRANSFERASE / PNMT/ IN VARIOUS BRAIN  
REGIONS OF RATS, CATS, HENS AND TURTLES  
A69-23303

EVOKED POTENTIALS IN HUMAN BRAIN DURING SLEEP AND  
CHANGED STATES OF ATTENTION BY PHOTIC  
STIMULATION  
A69-80811

ANTICHOLINERGIC DRUGS AFFECTING EPILEPTIC  
ACTIVITY FROM AMYGDALA AND FRONTAL CORTEX IN  
RHESUS MONKEYS  
A69-80940

ACTIVITY OF CELLS IN LATERAL GENICULATE NUCLEUS  
IN RESPONSE TO DIRECTION OF MOVEMENT OF STIMULUS  
IN RATS  
A69-80942

STRUCTURE AND FUNCTION OF BRAIN  
NASA-TT-F-12210  
N69-20199

**BREATHING**  
PHYSIOLOGICAL EFFECTS OF BREATHING COOL  
DEHUMIDIFIED AIR IN HOT HUMID ENVIRONMENT,  
TABULATING TOLERANCE TIME, HEART RATE, TEMPERATURE  
CHANGES AND SWEAT LOSS  
A69-22543

**BRIGHTNESS DISCRIMINATION**  
BRIGHTNESS DETERMINATION IN DARK-ADAPTED HUMANS  
VIEWING WHITE LIGHT BINOCULARLY  
A69-80791

JUDGMENTS OF MINIMAL AVERSION-THRESHOLDS FOR  
BRIGHTNESS AFTER LIGHT- OR DARK-ADAPTATION  
A69-80799

**BURNS (INJURIES)**  
CALCULATION OF SAFE SEPARATION DISTANCES FOR HUMAN  
FROM NUCLEAR EXPLOSION TO PREVENT FLASH  
BLINDNESS AND RETINAL BURN

AD-680842  
N69-20288

**C**

**CALCIFICATION**  
PARASITIC CALCIFICATIONS OF SOFT PARTS IN FLIGHT  
PERSONNEL STUDIED RADIOLOGICALLY, NOTING  
FILARIASIS, BILHARZIASIS AND WORMS  
A69-22729

RADIOLOGICAL IDENTIFICATION OF CERTAIN CASES OF  
PARASITIC CALCIFICATIONS IN SOFT TISSUES OF  
FLYING PERSONNEL  
A69-80898

**CALCIUM**  
VEGETABLE DIET INCLUDING 210 G OF DRY CHLORELLA  
BIOMASS DECREASES EFFECT ON CALCIUM AND MAGNESIUM  
ASSIMILATION TO PRODUCE INSIGNIFICANT NEGATIVE  
BALANCE OF K AND MN  
A69-23590

**CALCIUM METABOLISM**  
EFFECTS OF PREVIOUS CALCIUM INTAKES ON  
ADAPTATION TO LOW AND HIGH CALCIUM DIETS IN  
RATS  
A69-80840

SHORT AND EXTENDED COLD EXPOSURE EFFECTS ON  
SKELETAL METABOLISM IN RATS  
A69-80874

EFFECT OF CHICKEN AND HOG CALCITONIN ON SOME  
PARAMETERS OF CALCIUM, PHOSPHORUS, AND  
MAGNESIUM METABOLISM IN DOGS  
A69-80910

DIURNAL VARIATIONS IN NORMAL SERUM CALCIUM LEVELS  
IN ALBINO MICE  
A69-80913

HIGH CALCIUM DIET AND PARAMETERS OF CALCIUM  
METABOLISM IN OSTEOPOROSIS  
A69-80915

**CALORIC REQUIREMENTS**  
ALTERNATING DIETS OF HIGHER AND LOWER ENERGIES  
OR PROTEIN IN RATS ON METABOLIC ASPECTS  
A69-80842

**CALORIC STIMULI**  
CUTANEOUS LOCALIZATION OF NON-TACTILE THERMAL  
SENSATIONS IN HUMANS  
A69-80835

**CALORIMETERS**  
DESCRIPTION OF ERGOMETER FOR EXERCISING HUMANS  
DURING CALDRIMETRIC STUDIES IN CLIMATIC CHAMBER  
A69-80783

**CARBOHYDRATE METABOLISM**  
GLUCOSE, LACTATE, FREE FATTY ACIDS, HEPATIC  
GLYCOGEN AND ENDOCRINE ACTIVITY IN FASTING  
HIBERNATING DORMOUSE AND RAT IN DEEP HYPOTHERMIA  
A69-23118

**CARBON DIOXIDE**  
AMINO ALCOHOL REGENERABLE ABSORBERS OF CARBON  
DIOXIDES TOXICOLOGICAL CHARACTERISTICS, DISCUSSING  
ABSORBING ABILITY IN RATS  
A69-23502

EFFECT OF HIGH CARBON DIOXIDE CONCENTRATION ON  
BLOOD SEROTONIN IN MAN  
AD-681501  
N69-21551

**CARBON DIOXIDE CONCENTRATION**  
E EG. EKG, RESPIRATORY MOTIONS AND PULMONARY  
VENTILATION RECORDINGS IN STUDY OF CARBON DIOXIDE  
ADDITIONS EFFECT ON HUMAN TOLERANCE TO HYPOXIC  
CONDITIONS  
A69-23898

**CARBON DIOXIDE REMOVAL**  
DIGITAL COMPUTER PROGRAM FOR HEAT AND MASS  
TRANSFER CHARACTERISTICS OF SPACECRAFT CARBON  
DIOXIDE ADSORPTION BEDS, DISCUSSING SURFACE  
PRESSURE OF ABSORBENT MATERIAL  
AICHE PAPER 19C  
A69-21931

EXPERIMENTAL PROGRAM TO EVALUATE REGENERABLE  
SORBENTS FOR CARBON DIOXIDE REMOVAL IN SPACE CABIN  
ENVIRONMENTS  
A69-22552

**CARBON MONOXIDE**  
OXYGEN AND CARBON MONOXIDE EQUILIBRIA OF HUMAN  
HEMOGLOBIN AT ELEVATED PRESSURE WITH AND  
WITHOUT NITROGEN-SUBSTITUTED HELIUM  
A69-80920

## CARDIOVASCULAR SYSTEM

- TILT-TABLE AND ACCELERATION TOLERANCE OF ATHLETES AND INACTIVE STUDENTS, COMPARING CARDIOVASCULAR RESPONSES, HEART RATE AND BLACKOUT LEVEL  
DVL-834 A69-21304
- AMPLITUDE VARIATIONS IN ULF BALLISTOCARDIOGRAMS OF YOUNG NORMAL AIRLINE STEWARDESSES AND APPLICANTS, DISCUSSING CARDIOVASCULAR REACTIVITY A69-22544
- PATHOLOGICAL CHANGES IN RESPIRATORY AND CARDIOVASCULAR SYSTEMS OF WHITE RATS DUE TO VARIOUS LEVELS OF HYPEROXIA A69-23577
- PATHOLOGICAL CHANGES IN RESPIRATORY AND CARDIOVASCULAR SYSTEMS OF WHITE RATS DUE TO VARIOUS LEVELS OF HYPEROXIA A69-23578
- LONG TERM HYPOKINESIA EFFECT ON CARDIOVASCULAR SYSTEM OF ATHLETES INDICATING HUMAN ORTHOSTATIC RESISTANCE INCREASE DUE TO PHYSICAL EXERCISES A69-23581
- ADAPTATION OF CARDIOVASCULAR SYSTEM TO HOT DRY ENVIRONMENTS IN TRAINED AND UNTRAINED YOUNG SUBJECTS DURING MODERATE EXERCISE A69-80813
- CASE HISTORIES**  
CASE STUDY OF ACQUIRED EPILEPSY IN FIGHTER PILOT A69-80897
- CATARACTS**  
PULSED AND CW MICROWAVE POWER EFFECTS ON RABBIT EYES, NOTING LENS OPACITIES PRODUCED A69-23185
- CLINICAL AND ELECTROPHORETIC ANALYSIS OF LASER INDUCED CATARACTS IN IRRADIATED RABBITS EYE LENSES AD-681899 N69-21533
- CATECHOLAMINE**  
EPINEPHRINE FORMING ENZYME PHENYLETHANOLAMINE- N-METHYL TRANSFERASE / PNMT/ IN VARIOUS BRAIN REGIONS OF RATS, CATS, HENS AND TURTLES A69-23303
- DOSAGE AND TIME EFFECTS OF CIGARETTE SMOKING ON CATECHOLAMINE EXCRETION AND BEHAVIOR A69-80926
- CATS**  
ADAPTIVE CHANGES IN REACTIVITY AND WALL/LUMEN RATIO IN CAT BLOOD VESSELS EXPOSED TO PROLONGED TRANSMURAL PRESSURE DIFFERENCE AND INTRA-ARTERIAL NOREPINEPHRINE INFUSION A69-80757
- MODIFICATION OF SKIN MECHANICAL PROPERTIES BY SWEAT GLAND ACTIVITY OF ANESTHETIZED CATS CONTROLLED BY ELECTRICAL STIMULATION OF MEDIAL PLANTAR NERVE A69-80772
- THEORY OF BLOOD FLOW IN CAPILLARIES OF CAT LUNG ALVEOLI A69-80779
- EFFECT OF ACUTE HYPOXIA AND HYPERCAPNIA ON ULTRASTRUCTURE OF CENTRAL NERVOUS SYSTEM OF CATS A69-80806
- EVOKED POTENTIALS TO SOUNDS OF DIFFERENT DIRECTIONS IN AUDITORY CORTEX OF CATS A69-80810
- DYNAMICS OF ELECTRORETINOGRAM BETA WAVE IN CATS DURING RHYTHMIC PHOTIC STIMULATION A69-80812
- EFFECT OF EXPERIMENTAL HYPOTHERMIA ON SUMMATION PROCESSES RELATED TO STIMULATION AND LABILITY OF CENTRAL FLEXOR REFLEX SYSTEM IN CATS A69-80855
- MODIFIED RECEPTIVE FIELDS OF CELLS IN VISUAL CORTEX OF CATS OCCURRING SPONTANEOUSLY AND ASSOCIATED WITH BODY TILT A69-80873
- ATTENTION EFFECTS ON AUDITORY EVOKED POTENTIALS OF CATS AD-681207 N69-20448
- CAVITATION CORROSION**  
PERFORMANCE AND CAVITATION DAMAGE TO AXIAL FLOW PUMP ROTOR BLADES IN HIGH TEMPERATURE LIQUID SODIUM NASA-TN-D-5138 N69-21773
- CELLS (BIOLOGY)**  
STRUCTURAL AND FUNCTIONAL CHANGES IN CELLS AS RESULT OF FREEZING OF MUSCULAR TISSUE OR SUSPENSION OF ERYTHROCYTES A69-23117
- GAS VACUOLES DEVELOPMENT IN BLUE GREEN ALGAE BY CELL TRANSFER FROM DEFINED MEDIUM TO DISTILLED WATER A69-23184
- DIRECT EPOXY EMBEDDING OF MONOLAYER CELLS CULTURED ON MILLIPORE FILTER AND FIXED, DEHYDRATED AND MICROSCOPED BEFORE IMMERSION A69-23404
- ACCELERATION EFFECTS ON CELLULAR AND SUBCELLULAR STRUCTURES ENZYME ACTIVITY IN HUMANS AND ANIMALS, NOTING CHANGES RESULTING FROM CHANGED PERMEABILITY OF MEMBRANES A69-23496
- PROTECTION AGAINST IONIZING RADIATION AT CELLULAR LEVEL, ASSESSED BY VARIOUS PARAMETERS A69-80819
- WATER ELECTROLYSIS DURING PHOTOSYNTHESIS IN LIVE LEAVES N69-21664
- CENTRAL NERVOUS SYSTEM**  
RATS SENSITIVITY TO ACCELERATIONS FOUND DEPENDENT ON EXCITATION-INHIBITION RATIO IN CENTRAL NERVOUS SYSTEM AND HYPOPHYSICAL-ADRENAL SYSTEM REACTIONS DURING ACOUSTIC EXCITATION A69-23497
- TRANSVERSE ACCELERATIONS EFFECT ON DOGS GASTROINTESTINAL TRACT SECRETORY ACTIVITY, NOTING CENTRAL NERVOUS SYSTEM ROLE A69-23498
- ACETYLCHOLINE CONTENT IN CENTRAL NERVOUS SYSTEM OF RATS WITH CHRONIC HYPERCAPNIA A69-80756
- EFFECT OF ACUTE HYPOXIA AND HYPERCAPNIA ON ULTRASTRUCTURE OF CENTRAL NERVOUS SYSTEM OF CATS A69-80806
- CENTRAL NERVOUS SYSTEM DEPRESSANTS**  
BARBAMYL EFFECT WITH AND WITHOUT SOMATOTROPIC HORMONE INJECTION IN MICE DURING PROLONGED ISOLATION AND HYPOKINESIA, NOTING SLEEP DURATION A69-23576
- INHIBITORY EFFECTS OF BARBITURATES ON N A D H-CYTOCHROME C OXIDOREDUCTASE IN RESPIRING MITOCHONDRIAL AND SUBMITOCHONDRIAL PREPARATIONS A69-80760
- CENTRIPETAL FORCE**  
COMPARISON OF EFFECTS OF STIMULATION BY CENTRIPETAL FORCE ON PERCEPTION OF VISUAL HORIZONTAL IN PARTIALLY SIGHTED AND NORMAL HUMANS A69-80786
- CEREBRAL CORTEX**  
CEREBRAL DYSFUNCTION AND FLICKER DETECTION - ROLE OF RETINAL ADAPTATION A69-80796
- CARDIAC REFLEXES AND FUNCTIONAL AND HISTOLOGICAL STATE OF CORTICAL NEURONS WITH EXPOSURE TO ELECTROMAGNETIC FIELDS OF SUPERHIGH FREQUENCIES IN RATS A69-80809
- EVOKED POTENTIALS TO SOUNDS OF DIFFERENT DIRECTIONS IN AUDITORY CORTEX OF CATS A69-80810
- CORRELATION BETWEEN BRAIN ELECTRICAL ACTIVITY AND CHANGES IN ENVIRONMENTAL OXYGEN TENSIONS IN RATS DURING HYPOTHERMIA A69-80854
- MODIFIED RECEPTIVE FIELDS OF CELLS IN VISUAL CORTEX OF CATS OCCURRING SPONTANEOUSLY AND

## CEREBROSPINAL FLUID

## SUBJECT INDEX

- ASSOCIATED WITH BODY TILT A69-80873
- EVOKED POTENTIALS OF CORTEX INDUCED BY JOINT MOVEMENT - COMPARISON TO THOSE OF ELECTRICAL STIMULATION AND TOUCH AND RELATION TO NORMAL ELECTROENCEPHALOGRAM A69-80941
- ACOUSTICALLY EVOKED CORTICAL POTENTIALS IN RATS DURING SLEEP AND WAKEFULNESS N69-20003
- IMPEDANCE MEASUREMENTS AT VARIOUS DEPTHS OF RAT CEREBRAL CORTEX DURING DEPRESSION AD-682239 N69-21819
- CEREBROSPINAL FLUID**  
REGIONAL UPTAKE OF MELATONIN FROM BLOOD OR CEREBROSPINAL FLUID BY RAT BRAIN A69-21466
- CERENKOV RADIATION**  
USE OF CERENKOV EFFECT IN DETECTION AND ASSAY OF BETA-EMITTING RADIONUCLIDES IN BIOLOGICAL SPECIMENS EUR-4084.F N69-21079
- CESIUM 137**  
TRANSMISSION SCANNING WITH TECHNETIUM 99 AND CESIUM 137 COO-1422-24 N69-19635
- CHARACTER RECOGNITION**  
SYMMETRY OF LETTERS AS FACTOR IN TACHISTOSCOPIC RECOGNITION A69-80795
- SYMBOL RECOGNITION AND SPATIAL SENSE OF HUMAN RETINA NASA-TT-F-12074 N69-21109
- CHEMICAL COMPOSITION**  
PSYCHOLOGICAL, PHYSIOLOGICAL AND BIOCHEMICAL RESPONSES TO CONTROLLED DIETS, DETERMINING REGIONAL AND TOTAL BODY SWEAT COMPOSITION OF MEN WORKING IN TEMPERATE ENVIRONMENT A69-23314
- CHEMICAL ELEMENTS**  
RELATIONSHIP BETWEEN TOXICITY AND ELECTRON CONFIGURATION N69-19846
- CHEMICAL EQUILIBRIUM**  
OXYGEN AND CARBON MONOXIDE EQUILIBRIA OF HUMAN HEMOGLOBIN AT ELEVATED PRESSURE WITH AND WITHOUT NITROGEN-SUBSTITUTED HELIUM A69-80920
- CHEMICAL REACTIONS**  
POLY A-POLY U SYNTHESIZED BY AZOTOBACTER VINELANDI RNA POLYMERASE IN UNPRIMED REACTION CONTAINING ATP AND UTP, FOLLOWING SHORT LAG PERIOD A69-24185
- SOVIET DEVELOPMENT OF PHYSIOLOGICALLY ACTIVE COMPOUNDS - ATRANES, COORDINATION TRICYCLIC COMPOUNDS N69-19853
- CHEMILUMINESCENCE**  
IONIC AND P H TRANSITIONS TRIGGERING CHLOROPLAST POST-ILLUMINATION LUMINESCENCE A69-80923
- CHEMISORPTION**  
EXPERIMENTAL PROGRAM TO EVALUATE REGENERABLE SORBENTS FOR CARBON DIOXIDE REMOVAL IN SPACE CABIN ENVIRONMENTS A69-22552
- CHICKENS**  
INCREASED CHRONIC ACCELERATION PHYSIOLOGICAL EFFECTS ON CHICKENS, COMPARING HEMATOLOGICAL OBSERVATIONS WITH EXERCISE CAPACITY, SURVIVAL AND SEXUAL DEVELOPMENT A69-23041
- REPEATED BLOOD SAMPLING EFFECT ON PLASMA CHOLINESTERASE, ACID PHOSPHATASE, ALKALINE PHOSPHATASE AND HEMATOCRIT RATIOS IN DOMESTIC CHICKENS A69-23158
- CHILE**  
IDENTIFICATION OF STREPTOMYCETE ISOLANTS FROM CHILE, ARIZONA, AND ANTARCTIC DESERT SOILS NASA-CR-100445 N69-21223
- CHLORELLA**  
MINERAL NUTRITION ELEMENTS CONCENTRATION STABILIZATION BY CORRECTING SOLUTION ADDITIONS DURING PROLONGED CHLORELLA CULTIVATION WITH MEDIUM RECYCLING A69-23579
- VEGETABLE DIET INCLUDING 210 G OF DRY CHLORELLA BIOMASS DECREASES EFFECT ON CALCIUM AND MAGNESIUM ASSIMILATION TO PRODUCE INSIGNIFICANT NEGATIVE BALANCE OF K AND MN A69-23590
- QUANTUM YIELD AND ACTION SPECTRUM OF PHOTOSYNTHESIS AND FLUORESCENCE IN CHLORELLA PYRENOIDOSA A69-80871
- LIGHT-INDUCED CHANGES IN FLUORESCENCE YIELD OF CHLOROPHYLL A IN VIVO - DIP AND PEAK IN FLUORESCENCE TRANSIENT OF CHLORELLA PYRENOIDOSA A69-80911
- LIGHT-INDUCED CHANGES IN FLUORESCENCE OF CHLOROPHYLL A IN VIVO - EFFECT OF PREILLUMINATION ON FLUORESCENCE TRANSIENT OF CHLORELLA PYRENOIDOSA A69-80912
- STRUCTURE AND FUNCTION OF CHLOROPLAST PROTEINS - RIBULOSE-1,5-DIPHOSPHATE CARBOXYLASE OF CHLORELLA ELLIPSOIDEA A69-80922
- CHLORINE COMPOUNDS**  
RENAL FUNCTIONAL DISTURBANCES IN MAN EXPOSED TO PROLONGED POISONING BY CHLORORGANIC COMPOUNDS A69-80866
- CHLOROPHYLLS**  
LIGHT-INDUCED CHANGES IN FLUORESCENCE YIELD OF CHLOROPHYLL A IN VIVO - DIP AND PEAK IN FLUORESCENCE TRANSIENT OF CHLORELLA PYRENOIDOSA A69-80911
- LIGHT-INDUCED CHANGES IN FLUORESCENCE OF CHLOROPHYLL A IN VIVO - EFFECT OF PREILLUMINATION ON FLUORESCENCE TRANSIENT OF CHLORELLA PYRENOIDOSA A69-80912
- CHLOROPLASTS**  
STRUCTURE AND FUNCTION OF CHLOROPLAST PROTEINS - RIBULOSE-1,5-DIPHOSPHATE CARBOXYLASE OF CHLORELLA ELLIPSOIDEA A69-80922
- IONIC AND P H TRANSITIONS TRIGGERING CHLOROPLAST POST-ILLUMINATION LUMINESCENCE A69-80923
- CHOLINE**  
EFFECT OF CHOLINE ON PHOSPHOLIPID METABOLISM IN LIVER BRAIN AND MUSCLES ON GUINEA PIGS AT LAST STAGE OF RADIATION SICKNESS A69-80755
- ACETYLCHOLINE CONTENT IN CENTRAL NERVOUS SYSTEM OF RATS WITH CHRONIC HYPERCAPNIA A69-80756
- CHROMIUM ISOTOPES**  
SIMULTANEDOUS MEASUREMENT OF BLOOD PARAMETERS USING RADIOCHROMIUM LABELED RED CELLS AND RADIOIRON LABELED PLASMA AD-682287 N69-21904
- CHROMOSOMES**  
SOMATIC CHROMOSOMES STUDY OF MONGOLIAN GERBILS NASA-CR-100458 N69-21149
- INDUCTION AND REJOINING OF BREAKS IN DEOXYRIBONUCLEIC ACID OF HUMAN CELLS AT VARIOUS PHASES OF CELL CYCLE MBL-1968-15 N69-21286
- CHRONIC CONDITIONS**  
INCREASED CHRONIC ACCELERATION PHYSIOLOGICAL EFFECTS ON CHICKENS, COMPARING HEMATOLOGICAL OBSERVATIONS WITH EXERCISE CAPACITY, SURVIVAL AND SEXUAL DEVELOPMENT A69-23041
- CIRCADIAN RHYTHMS**  
RAPID GLOBAL TRANSPORTATION EFFECT ON CIRCADIAN RHYTHMIC PATTERNS IN HUMAN BODY FUNCTIONS, DISCUSSING KIDNEY EXCRETION AND PITUITARY ADRENAL CORTICAL SYSTEM A69-22545

## SUBJECT INDEX

## CONFERENCES

- PLASMA CORTICOSTERONE RESPONSE TO ENVIRONMENTAL STIMULATION - EFFECT OF DURATION OF STIMULATION OF 24 HOUR ADRENOCORTICAL RHYTHM IN RATS  
A69-80822
- CIRCADIAN RHYTHMS IN THERMOREGULATION MECHANISMS IN MAN  
A69-80878
- DIURNAL VARIATIONS IN NORMAL SERUM CALCIUM LEVELS IN ALBINO MICE  
A69-80913
- RELATIONSHIP BETWEEN EFFICIENCY DURING MENTAL TASKS AND CIRCADIAN RHYTHM OF BODY TEMPERATURE AFFECTED BY CHANGE IN WORK-REST CYCLE  
A69-80929
- ORIGIN OF NYCTITROPIC MOVEMENTS OF LEAF ORGANS  
NASA-TT-F-11949  
N69-20318
- NYCTITROPIC AND AUTONOMOUS CIRCADIAN MOVEMENTS IN PLANTS  
NASA-TT-F-11940  
N69-21222
- CIRCULATORY SYSTEM**  
BEHAVIORAL AND CIRCULATORY RESPONSE TO X RAY IRRADIATION IN MONKEYS  
AD-680843  
N69-20138
- CLEANING**  
DESIGN AND EVALUATION OF VACUUM CLEANING SYSTEM FOR ISOLATION CHAMBERS  
A69-80936
- CLEARANCES**  
CLEARANCE, STRENGTH, AND PERFORMANCE DATA FOR BARE-HANDED AND PRESSURE-GLOVED OPERATORS  
AD-681457  
N69-21843
- CLINICAL MEDICINE**  
CLINICAL REPORT ON APOLLO 7 AND 8 MISSION MEDICAL DATA, DISCUSSING PREFLIGHT PREVENTIVE MEDICAL ACTIVITIES, INFLIGHT TREATMENT, RADIATION LEVELS, ETC  
A69-22542
- CLOSED CIRCUIT TELEVISION**  
ORAL IMAGE INTENSIFIER WITH PERIPHERAL EQUIPMENT  
AD-680967  
N69-20564
- CLOSED ECOLOGICAL SYSTEMS**  
REACTORS TECHNICAL CHARACTERISTICS FOR HIGH TEMPERATURE MINERALIZATION OF CLOSED LIFE SYSTEMS BIOLOGICAL WASTES, DERIVING EQUATIONS TO ESTIMATE ENERGY BALANCE  
A69-23504
- MATHEMATICAL MODEL OF CLOSED BIOLOGICAL CYCLE REGENERATING PART OF LIFE SUPPORT PRODUCTS, INCORPORATING ASTRONAUT, STORAGE AND REGENERATING WASTE DISPOSAL UNITS  
A69-23580
- MINIATURIZED ACTIVATED SLUDGE PROCESS FOR TREATING CONCENTRATED HUMAN WASTES IN CLOSED ECOLOGICAL SYSTEM  
AD-681127  
N69-20651
- METABOLIC CHARACTERISTICS OF BACTERIA PRESENT IN ACTIVATED SLUDGE OF CLOSED ECOLOGICAL SYSTEMS  
AD-681126  
N69-20667
- CLOTHING**  
PHYSIOLOGICAL RESPONSES IN MEN DURING PHYSICAL EXERCISE IN SHORTS, IN FOOTBALL UNIFORM AND WITH BACKPACK  
A69-80883
- COBALT 60**  
DOSE RATE EFFECTS ON MICE EXPOSED TO COBALT 60 GAMMA IRRADIATION  
AD-682288  
N69-21609
- COCHLEA**  
NOISE AND TOXIC AGENTS EFFECT ON INNER EAR OF ANIMALS AND HUMAN BEINGS  
AD-681834  
N69-21860
- COCKPITS**  
VISUAL ACUITY UNDER DIM RED AND WHITE LIGHT  
AD-680845  
N69-20596
- COLD ACCLIMATIZATION**  
COLD ACCLIMATIZATION IN MEN AND ANIMALS UNDER ARCTIC LIVING CONDITIONS  
A69-80851
- PHYSIOLOGICAL RESPONSES OF MOUNTAIN CLIMBERS TO STRESSES OF CLIMB - 1967 WINTER ASCENT OF MT. MCKINLEY  
A69-80853
- COLOR VISION**  
LUMINANCE REQUIREMENTS FOR HUE IDENTIFICATION IN SMALL TARGETS  
A69-80823
- CHROMATICITY AND LUMINANCE EFFECTS ON VISUAL DETECTION OF COLORS  
AD-680938  
N69-20384
- COMBAT**  
AVIATION COMBAT PERFORMANCE CRITERION BY ANALYZING QUESTIONNAIRES SENT TO COMBAT DEPLOYED FLIGHT SURGEONS, NOTING POSSIBLE VALUE OF PEER RATING  
A69-22549
- COMMUNITIES**  
GRAPH THEORY APPLIED TO AQUATIC ORGANISM COMMUNITIES  
JPRS-47689  
N69-21455
- COMPARTMENTS**  
EFFECT OF INSPIRATORY FLOW RATE ON REGIONAL DISTRIBUTION OF INSPIRED GAS IN HUMANS AS MEASURED BY XENON 133  
A69-80775
- COMPENSATORY TRACKING**  
ROLL-MOTION CUES FOR MAN-VEHICLE CONTROL IN COMPENSATORY TRACKING TASK WITH DISTURBANCE INPUT  
A69-23879
- HUMAN INFORMATION PROCESSING RATES DURING ONE AND TWO AXIS COMPENSATORY TRACKING TASKS WITH SECONDARY AUDITORY TASK  
A69-23880
- COMPUTER PROGRAMMING**  
DYNAMIC MANIPULATION OF HEURISTICS AS PRODUCTION RULES FOR COMPUTER PROGRAMS, AND PROBLEM SOLVING MACHINE LEARNING  
AD-681027  
N69-20483
- LITERATURE SURVEY CONCERNING COMPUTER-ASSISTED INSTRUCTION APPLICATIONS, SYSTEMS, PROGRAMMING LANGUAGES, THEORIES, AND ADMINISTRATION  
AD-681079  
N69-21031
- COMPUTER PROGRAMS**  
COMPUTER PROGRAM FOR ONBOARD MEDICAL CHECKUPS OF SPACECRAFT CREWS DURING EXTENDED SPACE FLIGHTS, DISCUSSING TESTS AND INTERVALS  
A69-23505
- METHODS AND APPLICATIONS OF QUANTITATIVE COMPUTER ANALYZED SCANNING USING VARIOUS RADIOISOTOPES  
NYO-910-76-APP-1  
N69-19819
- PREDICTIONS OF BRIGHT FUTURE FOR CYBERNETICS  
JPRS-47612  
N69-21371
- COMPUTERIZED SIMULATION**  
PREREQUISITES FOR CHEMICAL THERMODYNAMIC MODELS OF LIVING SYSTEMS  
AD-680760  
N69-20585
- COMPUTERS**  
SCIENTIFIC RESEARCH IN MEDICINE, COMPUTERS, ETC. IN EASTERN EUROPE  
JPRS-47526  
N69-20319
- CONCENTRATION (COMPOSITION)**  
MINERAL NUTRITION ELEMENTS CONCENTRATION STABILIZATION BY CORRECTING SOLUTION ADDITIONS DURING PROLONGED CHLORELLA CULTIVATION WITH MEDIUM RECYCLING  
A69-23579
- CONDITIONING (LEARNING)**  
PERIODIC SHOCK IN RATS MAINTAINED ON VARIABLE-INTERVAL SCHEDULE OF REINFORCEMENT INTERSPERSED WITH SEQUENCE OF THREE DIFFERENT STIMULUS CONDITIONS  
A69-80808
- DIFFERENTIAL OPERANT CONDITIONING OF HEART RATE IN NORMAL SUBJECTS  
A69-80831
- CONFERENCES**  
DEPRESSED METABOLISM - CONFERENCE, WASHINGTON, AUGUST 1968  
A69-23116

CONGENITAL ANOMALIES

SUBJECT INDEX

SUMMARIZED SURVEYS OF PAPERS PRESENTED AT SECOND INTERNATIONAL DIVING- MEDICAL SYMPOSIUM, KIEL, GERMANY  
MBL-1968-10 N69-21309

ORAL PRESENTATIONS GIVEN AT CONFERENCE ON HUMAN FACTORS IN AIRCRAFT MAINTENANCE RELIABILITY  
N69-21685

CONGENITAL ANOMALIES  
DEVELOPMENT OF CONGENITAL ANOMALIES IN FROG EGGS  
NASA-TT-F-12049 N69-21144

CONTRAST  
REVIEW OF THEORETICAL AND EXPERIMENTAL RESEARCH ON REVERSAL OF SIMULTANEOUS LIGHTNESS-CONTRAST  
A69-80848

THRESHOLD CONTRAST FOR TARGET GRATINGS WITH SOME SPATIAL FREQUENCY - VISUAL ACUITY AND INFORMATION INTEGRATION  
A69-80948

FOURIER TRANSFORMATIONS APPLICATIONS ON CONTRAST SENSITIVITY FUNCTIONS OF HUMAN EYES  
IZF-1968-20 N69-21343

CONTROL BOARDS  
CONTROL OPERATION TIME FOUND DEPENDENT ON GLOVES, PHYSICAL CHARACTERISTICS OF CONTROL AND TYPE OF REQUIRED OPERATION  
A69-23180

GLOVE CHARACTERISTICS EFFECTS ON MANIPULABILITY, FINDING OPERATION TIME DIFFERENCES BETWEEN GLOVED AND BAREHANDED OPERATION DEPENDENT ON TYPE OF REQUIRED CONTROL OPERATION  
A69-23181

CONTROL EQUIPMENT  
HUMAN PILOT ADAPTATION IN SIMULATED MULTILoop VTOL HOVERING TASK WITH SERIES LOOP CLOSURE MODEL  
A69-23878

SYSTEM ANALYSIS OF REGENERATIVE CABIN ATMOSPHERE CONTROL SYSTEM  
NASA-TM-X-61517 N69-19642

CONTROLLED ATMOSPHERES  
HAMSTERS RESPONSES TO HELIUM-OXYGEN AND NITROGEN-OXYGEN AT AMBIENT TEMPERATURES, COMPARING RESPIRATION RATES, WEIGHTS AND BODY TEMPERATURES  
A69-23564

E EG, EKG, RESPIRATORY MOTIONS AND PULMONARY VENTILATION RECORDINGS IN STUDY OF CARBON DIOXIDE ADDITIONS EFFECT ON HUMAN TOLERANCE TO HYPOXIC CONDITIONS  
A69-23898

EFFECTS OF HIGH AND LOW BAROMETRIC PRESSURES ON SUSCEPTIBILITY AND RESISTANCE TO INFECTION IN MICE  
NASA-CR-100360 N69-20009

COOLING SYSTEMS  
RANQUE VORTEX TUBE AS COOLING DEVICE IN MA-3 VENTILATING GARMENT  
A69-22550

CORIOLIS EFFECT  
HUMAN MOTION SICKNESS SUSCEPTIBILITY WHEN EXPOSED TO CORIOLIS ACCELERATIONS DURING PARABOLIC FLIGHT WEIGHTLESSNESS  
NASA-CR-100502 N69-21386

CORNEA  
MONOMETHYLHYDRAZINE / MMH/ TOXIC EFFECTS ON CORNEA AND BLOOD AQUEOUS BARRIER STUDIED IN VIVO ON DOGS  
A69-22547

CORNEAL INJURY PRODUCED BY CARBON DIOXIDE LASER RADIATION  
AD-680915 N69-20524

CORTICOSTEROIDS  
PLASMA CORTICOSTERONE RESPONSE TO ENVIRONMENTAL STIMULATION - EFFECT OF DURATION OF STIMULATION OF 24 HOUR ADRENOCORTICAL RHYTHM IN RATS  
A69-80822

COSMIC RAYS  
ABSORBED RADIATION DOSES OF ASTRONAUTS DURING SPACE FLIGHT

NASA-TT-F-12162 N69-20924

CRAMPTON TEST  
USE OF CRAMPTON TEST TO EVALUATE EFFECT OF PHYSICAL TRAINING ON CARDIOVASCULAR CAPACITY IN ARMY RECRUITS  
A69-80867

CRITICAL FLICKER FUSION  
EFFECTS OF DEXTROAMPHETAMINE AND PHENOBARBITAL ON SIMPLIFIED STANDARDIZED CRITICAL FLICKER FREQUENCY MEASURE  
A69-80927

CUES  
ROLE OF VISUAL AND KINESTHETIC CUES IN LEARNING NOVEL SKILL IN HUMANS  
A69-80904

CULTURE TECHNIQUES  
DIRECT EPOXY EMBEDDING OF MONOLAYER CELLS CULTURED ON MILLIPORE FILTER AND FIXED, DEHYDRATED AND MICROSCOPED BEFORE IMMERSION  
A69-23404

MINERAL NUTRITION ELEMENTS CONCENTRATION STABILIZATION BY CORRECTING SOLUTION ADDITIONS DURING PROLONGED CHLORELLA CULTIVATION WITH MEDIUM RECYCLING  
A69-23579

SEMI-QUANTITATIVE TOTAL BODY SKIN CULTURE TECHNIQUE FOR PATIENTS IN PROTECTED ENVIRONMENT  
A69-80914

EFFICIENCY OF GROWTH BY HYDROGEN BACTERIA AND GROWTH RATE LIMITING FACTORS ON EFFICIENCY OF ENERGY CONVERSION  
NASA-CR-100417 N69-20885

CYBERNETICS  
OUTPUT ESTIMATES FOR AUTOMATA AND OPTIMIZATION OF LEARNING MACHINES WITH UNEQUAL INPUTS  
JPRS-47617 N69-21232

PREDICTIONS OF BRIGHT FUTURE FOR CYBERNETICS  
JPRS-47612 N69-21371

CYCLIC HYDROCARBONS  
SOVIET DEVELOPMENT OF PHYSIOLOGICALLY ACTIVE COMPOUNDS - ATRANES, COORDINATION TRICYCLIC COMPOUNDS  
N69-19853

CYTOLOGY  
SOMATIC CHROMOSOMES STUDY OF MONGOLIAN GERBILS  
NASA-CR-100458 N69-21149

D

DARK ADAPTATION  
DARK ADAPTATION MECHANISMS STUDIED FROM LIGHT INTENSITY RECOVERY AFTER EXPERIMENTAL FLASH, USING ELECTRORETINOGRAPHY METHODS  
A69-23588

BRIGHTNESS DETERMINATION IN DARK-ADAPTED HUMANS VIEWING WHITE LIGHT BINOCULARLY  
A69-80791

EFFECT OF LOW LEVEL RED OR WHITE LIGHT ON DARK ADAPTATION IN HUMANS  
A69-80932

DATA ACQUISITION  
CLINICAL REPORT ON APOLLO 7 AND 8 MISSION MEDICAL DATA, DISCUSSING PREFLIGHT PREVENTIVE MEDICAL ACTIVITIES, INFIGHT TREATMENT, RADIATION LEVELS, ETC  
A69-22542

DATA CORRELATION  
CORRELATION STUDY OF SIMULATION OF GEMINI EXTRAVEHICULAR ACTIVITY WITH FLIGHT RESULTS  
NASA-CR-1146 N69-19902

DATA PROCESSING  
AUTOMATIC COMPUTER PROCESSING OF PHYSIOLOGICAL DATA DURING SPACE FLIGHTS, DISCUSSING CHOICE OF COMPUTERS AND COMPUTER PROGRAMS  
A69-23509

HUMAN INFORMATION PROCESSING RATES DURING ONE AND TWO AXIS COMPENSATORY TRACKING TASKS WITH SECONDARY AUDITORY TASK  
A69-23880

THRESHOLD CONTRAST FOR TARGET GRATINGS WITH SOME SPATIAL FREQUENCY - VISUAL ACUITY AND

- INFORMATION INTEGRATION A69-80948
- DATA SAMPLING**  
PROGRAMMED SEARCH AND GRADIENT SEARCH METHODS FOR DETERMINATION OF SAMPLING INTERVALS IN SYNTHESIS OF SAMPLED DATA MODELS OF HUMAN OPERATORS A69-23881
- DATA TRANSMISSION**  
BIOTELEMETRY SYSTEM FOR ONBOARD MEDICAL INFORMATION PROCESSING DURING MANNED SPACE FLIGHT JPRS-47607 N69-20912
- DECISION THEORY**  
VISUAL BACKWARD MASKING OF SINGLE TARGET LINE BY SINGLE MASKING LINE - SIGNAL DETECTABILITY WITH CONTOUR CONTROL A69-80951  
STATISTICAL ANALYSIS AND FORM RECOGNITION PROBLEM AD-682066 N69-21836
- DECOMPRESSION SICKNESS**  
SUMMARIZED SURVEYS OF PAPERS PRESENTED AT SECOND INTERNATIONAL DIVING- MEDICAL SYMPOSIUM, KIEL, GERMANY MBL-1968-10 N69-21309  
DECOMPRESSION SICKNESS AND INERT GAS NARCOSIS RESEARCH AD-681042 N69-21316
- DECONTAMINATION**  
METABOLISM AND INTERNAL DECONTAMINATION OF RADIOACTIVE ZIRCONIUM-NIOBIUM SALTS CEA-R-3703 N69-19760
- DEHUMIDIFICATION**  
PHYSIOLOGICAL EFFECTS OF BREATHING COOL DEHUMIDIFIED AIR IN HOT HUMID ENVIRONMENT, TABULATING TOLERANCE TIME, HEART RATE, TEMPERATURE CHANGES AND SWEAT LOSS A69-22543  
WATER VAPOR REMOVAL SYSTEM FOR MANNED SPACECRAFT CABIN ENVIRONMENT CONTROL USING SILICA GLASS AD-681164 N69-20536
- DENTISTRY**  
ORAL IMAGE INTENSIFIER WITH PERIPHERAL EQUIPMENT AD-680967 N69-20564
- DEOXYRIBONUCLEIC ACID**  
DNA REPLICATION IN VIVO AS FUNCTION OF TEMPERATURE SENSITIVE POLYNUCLEOTIDE LIGASE MUTANT TH, TS A80 IN STRAND SYNTHESIS A69-24188  
INDUCTION AND REJOINING OF BREAKS IN DEOXYRIBONUCLEIC ACID OF HUMAN CELLS AT VARIOUS PHASES OF CELL CYCLE MBL-1968-15 N69-21286  
DOUBLE STRANDED BACTERIOPHAGE DNA FORMATION TOCK-52607-III N69-21344
- DEPLOYMENT**  
PROBABILITY MODEL FOR FLIGHT CREW DEPLOYMENT AD-680763 N69-20134
- DESIGN**  
DESIGN AND EVALUATION OF VACUUM CLEANING SYSTEM FOR ISOLATION CHAMBERS A69-80936
- DIAGNOSIS**  
ELABORATION OF PHYSIOLOGICAL PARAMETER COMPLEX TO DIAGNOSE FATIGUE DURING STATIC MUSCULAR ACTIVITY IN MAN A69-80856  
CASE STUDY OF ACQUIRED EPILEPSY IN FIGHTER PILOT A69-80897  
RADIOLOGICAL IDENTIFICATION OF CERTAIN CASES OF PARASITIC CALCIFICATIONS IN SOFT TISSUES OF FLYING PERSONNEL A69-80898
- DIESEL ENGINES**  
MICROORGANISM GROWTH WITH PETROLEUM FUELS AD-680804 N69-20205
- DIETS**  
PSYCHOLOGICAL, PHYSIOLOGICAL AND BIOCHEMICAL RESPONSES TO CONTROLLED DIETS, DETERMINING REGIONAL AND TOTAL BODY SWEAT COMPOSITION OF MEN WORKING IN TEMPERATE ENVIRONMENT A69-23314  
VEGETABLE DIET INCLUDING 210 G OF DRY CHLORELLA BIOMASS DECREASES EFFECT ON CALCIUM AND MAGNESIUM ASSIMILATION TO PRODUCE INSIGNIFICANT NEGATIVE BALANCE OF K AND MN A69-23590  
EFFECTS OF PREVIOUS CALCIUM INTAKES ON ADAPTATION TO LOW AND HIGH CALCIUM DIETS IN RATS A69-80840  
ALTERNATING DIETS OF HIGHER AND LOWER ENERGIES OR PROTEIN IN RATS ON METABOLIC ASPECTS A69-80842  
FOOD PRESERVATION AND SUPPLIES, AND NUTRITIONAL REQUIREMENTS OF SOVIET ASTRONAUTS IN SHORT AND EXTENDED SPACE FLIGHT - INTERVIEW WITH SOVIET SCIENTIST A69-80900  
HIGH CALCIUM DIET AND PARAMETERS OF CALCIUM METABOLISM IN OSTEOPOROSIS A69-80915
- DIRECTION**  
ACTIVITY OF CELLS IN LATERAL GENICULATE NUCLEUS IN RESPONSE TO DIRECTION OF MOVEMENT OF STIMULUS IN RATS A69-80942
- DISCHARGE COEFFICIENT**  
DISCHARGE RATES OF METABOLIC PRODUCTS IN MEN CONFINED IN PRESSURE CHAMBER WEARING AIRTIGHT SUITS AND GAS MASKS A69-23508
- DISEASES**  
HIGH CALCIUM DIET AND PARAMETERS OF CALCIUM METABOLISM IN OSTEOPOROSIS A69-80915
- DISPENSERS**  
STORAGE-DISPENSER DEVICE FOR FOOD CUBES ABOARD SPACE VEHICLE AD-680840 N69-20546
- DISPLAY DEVICES**  
MANUAL CONTROL DISPLAYS FOR INSTRUMENT LANDING APPROACH OF LARGE SUBSONIC JET TRANSPORT, EVALUATING CLOSED LOOP SYSTEM PERFORMANCE AND SCANNING WORKLOAD A69-23877
- DISTANCE**  
INFORMATION OF DISTANCE IN JUDGING ABSOLUTE SIZE A69-80872
- DISTRIBUTION (PROPERTY)**  
EFFECT OF INSPIRATORY FLOW RATE ON REGIONAL DISTRIBUTION OF INSPIRED GAS IN HUMANS AS MEASURED BY XENON 133 A69-80775
- DOGS**  
MONOMETHYLHYDRAZINE / MMH/ TOXIC EFFECTS ON CORNEA AND BLOOD AQUEOUS BARRIER STUDIED IN VIVO ON DOGS A69-22547  
X RAY IRRADIATED DOGS SUBJECTED TO HEAT STRESSES TO DETERMINE THERMOREGULATORY ABILITY A69-22548  
TRANSVERSE ACCELERATIONS EFFECT ON DOGS GASTROINTESTINAL TRACT SECRETORY ACTIVITY, NOTING CENTRAL NERVOUS SYSTEM ROLE A69-23498  
DOGS ORTHOSTATIC TOLERANCE AND RESISTANCE TO TRANSVERSE ACCELERATION AFTER 14-DAY HYPODYNAMIA, STUDYING TACHYCARDIA AND ARTERIAL PRESSURE A69-23499  
DIRECT EFFECT OF NOREPINEPHRINE AND ANGIOTENSIN ON PULMONARY VEINS OF INTACT DOGS A69-80761  
CONTINUOUS POSITIVE-PRESSURE BREATHING IN ACUTE HEMORRHAGIC EDEMA IN DOGS A69-80774  
HEMODYNAMIC EFFECTS OF CHANGES IN BLOOD VOLUME DURING INTERMITTENT POSITIVE-PRESSURE

VENTILATION A69-80818

EFFECT OF STATIC AND DYNAMIC PHYSICAL EXERCISES ON AMINO ACID CONCENTRATIONS IN DOG URINE A69-80861

INSTANTANEOUS PERIPHERAL VASCULAR RESISTANCE CHANGES CAUSED BY CRITICAL CLOSING PHENOMENON IN DOGS A69-80882

POLAROGRAPHIC DETERMINATION OF TISSUE OXYGEN TENSION BY MEASURING FLUID IN IMPLANTED CAPSULE IN DOGS A69-80888

EFFECT OF CHICKEN AND HOG CALCITONIN ON SOME PARAMETERS OF CALCIUM, PHOSPHORUS, AND MAGNESIUM METABOLISM IN DOGS A69-80910

PHYSIOLOGICAL PROBLEMS DURING PROLONGED WEIGHTLESSNESS NASA-TT-F-12100 N69-20169

DOPPLER EFFECT  
DISCRIMINATION OF REPEATED AUDITORY PATTERNS OF PULSED DOPPLER SEQUENCES A69-80792

DOSAGE  
DOSAGE AND TIME EFFECTS OF CIGARETTE SMOKING ON CATECHOLAMINE EXCRETION AND BEHAVIOR A69-80926

DOSIMETERS  
CONCEPTS OF RADIATION DOSIMETRY, RADIATION BIOLOGY, AND RADIATION CHEMISTRY JAERI-4047 N69-20682

DOSIMETRY OF GAMMA RADIATION EXPOSURE OF PERSONNEL AE-342 N69-21310

DRAG REDUCTION  
WATER TANK DEVELOPMENT OF ORGANISMS AND THEIR USE AS DRAG REDUCING AGENTS NPL-SHIP-130 N69-21264

DRINKING  
PORTABLE, MULTIUNIT LOW-PRESSURE CHAMBER WITH LOCKS FACILITATING INTRODUCTION AND REMOVAL OF FOOD DISHES AND REPLENISHING DRINKING WATER DURING LONG-TERM ANIMAL EXPOSURE A69-80778

DROSOPHILA  
RADIATION SENSITIVITY OF DROSOPHILA EMBRYOS IN RELATION TO AGE, IRRADIATION IN AIR, AND IN NITROGEN A69-80820

DRUGS  
OBSERVATIONS SUGGESTING PRESERVATION OF SKILLED MOTOR ACTS DESPITE DRUG-INDUCED STRESS A69-80925

DYES  
EFFECT OF MIXED GAMMA-NEUTRON RADIATIONS ON SPECTRAL ABSORPTION OF INDOCYANINE GREEN AD-681372 N69-20703

DETERMINATION OF FREE PHOSPHATE GROUPS IN E. COLI RIBOSOMES BY OPTICAL METHODS NASA-TT-F-12118 N69-21080

DYNAMIC CONTROL  
ACTIVE BROADBAND VIBRATION ISOLATION OF HUMAN SUBJECTS FROM SEVERE VERTICAL DYNAMIC EXCITATIONS EXPERIENCED IN LOW LEVEL HIGH SPEED FLIGHT ASME PAPER 69-VIBR-65 A69-24157

DYNAMIC MODELS  
MATHEMATICAL, PHYSICAL AND PHYSIOLOGICAL MODELING FOR ANALYSIS OF FUNCTIONAL CHANGES DURING VARYING GRAVITY CONDITIONS A69-22541

DYNAMIC RESPONSE  
E EG, HEART BEAT, RESPIRATION RATES, BODY TEMPERATURE, MOTOR ACTIVITY, PHYSICAL AND MENTAL EFFICIENCY OF MAN DURING ANECHOIC CHAMBER CONFINEMENT A69-23510

## E

EARTH ATMOSPHERE  
PHOTOCHEMICAL PRODUCTION OF REDUCED ORGANIC COMPOUNDS OF C AND N IN PRIMITIVE EARTH ATMOSPHERE A69-21465

ECOLOGY  
STUDIES ON RADIATION EFFECTS, RADIOELEMENT TOXICITY AND REMOVAL, INHALATION, AND ECOLOGY BNWL-714-VOL-1 N69-19894

EDEMA  
CONTINUOUS POSITIVE-PRESSURE BREATHING IN ACUTE HEMORRHAGIC EDEMA IN DOGS A69-80774

EDUCATION  
EFFECT OF INSTRUCTIONS ON VISUAL AND TACTILE JUDGMENT OF MULLER-LYER ILLUSION A69-80903

KNOWLEDGE OF RESULTS IN TRAINING FOR VIGILANCE TASKS A69-80930

LITERATURE SURVEY CONCERNING COMPUTER-ASSISTED INSTRUCTION APPLICATIONS, SYSTEMS, PROGRAMMING LANGUAGES, THEORIES, AND ADMINISTRATION AD-681079 N69-21031

EFFERENT NERVOUS SYSTEMS  
DETERMINATION OF DURATION OF MOTOR REACTION SPINAL COMPONENT LATENT PERIOD IN RELATION TO DIFFERENT VARIATIONS OF REACTION TIME IN MAN A69-80815

EGGS  
SIMULATED WEIGHTLESSNESS USED IN DETERMINING ONTOGENESIS OF OTOLITH ORGAN IN TADPOLES AND EGGS AS FUNCTION OF ACCELERATION FORCES DVL-855 A69-24021

FROG OVA STUDIES OF EMBRYO DEVELOPMENT MECHANICS NASA-TT-F-12068 N69-21074

DEVELOPMENT OF CONGENITAL ANOMALIES IN FROG EGGS NASA-TT-F-12049 N69-21144

EJECTION INJURIES  
OCULAR INJURIES DURING BAILOUT FROM VAMPIRE AIRCRAFT, NOTING HEMORRHAGES A69-23380

ELECTRIC POTENTIAL  
ACOUSTICALLY EVOKED CORTICAL POTENTIALS IN RATS DURING SLEEP AND WAKEFULNESS N69-20003

ATTENTION EFFECTS ON AUDITORY EVOKED POTENTIALS OF CATS AD-681207 N69-20448

ELECTRIC STIMULI  
RESPONSE RATES OF RATS TO PERIODIC SHOCKING FOR FOOD REINFORCEMENT WITH ADDED CLOCK CUE STIMULI A69-23304

EFFECT OF DURATION TONE AND SHOCK ON STOMACH ULCERATION AND ADRENAL ASCORBIC ACID IN RATS A69-80768

MODIFICATION OF SKIN MECHANICAL PROPERTIES BY SWEAT GLAND ACTIVITY OF ANESTHETIZED CATS CONTROLLED BY ELECTRICAL STIMULATION OF MEDIAL PLANTAR NERVE A69-80772

THRESHOLD AND RESPONSE-LATENCY AS FUNCTION OF RISE-TIME OF ELECTRICAL STIMULI A69-80789

EXCITATION OF ELLIPSE PHENOMENON BY HARMONICS OF RECTANGULAR STIMULATING CURRENT A69-80817

ELECTRICAL IMPEDANCE  
IMPEDANCE MEASUREMENTS AT VARIOUS DEPTHS OF RAT CEREBRAL CORTEX DURING DEPRESSION AD-682239 N69-21819

ELECTROCARDIOGRAPHY  
ELECTROCARDIOGRAPHIC T-WAVE CHANGES RELATED TO

SUBJECT INDEX

ENZYME ACTIVITY

- BRADYCARDIA IN HEALTHY INDIVIDUALS, DISCUSSING T-WAVE INVERSION IN PEOPLE WITH VAGOTONIA A69-22557
- ELECTROCARDIOGRAMS OF HOMEOTHERMIC ANIMAL, HIBERNATOR, WARM AND COOL CLIMATE POIKILOtherMIC ANIMALS COMPARED FOR HYPOTHERMIA, CONSIDERING METABOLIC CHANGES CONTRIBUTING TO EKG CHANGES A69-23123
- SIMPLE PROCEDURE FOR UNDERWATER HARDWIRE ELECTROCARDIOGRAM RECORDING A69-80938
- ELECTROCHEMISTRY**  
ELECTROCHEMICALLY REVERSIBLE SILVER-SILVER CHLORIDE ELECTRODE FOR DETECTING BIOELECTRIC POTENTIAL DIFFERENCES GENERATED BY HUMAN MUSCLES AND ORGANS NASA-CASE-XMS-02872 N69-21925
- ELECTRODES**  
ELECTROCHEMICALLY REVERSIBLE SILVER-SILVER CHLORIDE ELECTRODE FOR DETECTING BIOELECTRIC POTENTIAL DIFFERENCES GENERATED BY HUMAN MUSCLES AND ORGANS NASA-CASE-XMS-02872 N69-21925
- ELECTROENCEPHALOGRAPHY**  
E EG LEAD SENSITIVITY TO LOCATION AND ORIENTATION OF SOURCES IN BRAIN BY APPLYING RECIPROcity THEOREM A69-23186
- E EG, HEART BEAT, RESPIRATION RATES, BODY TEMPERATURE, MOTOR ACTIVITY, PHYSICAL AND MENTAL EFFICIENCY OF MAN DURING ANECHOIC CHAMBER CONFINEMENT A69-23510
- CORTICAL SLOW POTENTIAL CHANGES IN MAN RELATED TO INTERSTIMULUS INTERVAL AND TO PRETRIAL PREDICTION OF INTERSTIMULUS INTERVAL A69-80832
- EFFECTS OF ATTENTION AND ACTIVATION ON VISUAL EVOKED CORTICAL POTENTIAL AND REACTION TIME A69-80834
- SLEEP PATTERNS IN HUMANS AFTER SINGLE DOSE OF SECOBARBITAL A69-80924
- ELECTROMAGNETIC FIELDS**  
BALANCED FIELD-TYPE ELECTROMAGNETIC FLOWMETER WHICH PERMITS MEASUREMENTS OF SEVERAL BLOOD FLOWS SIMULTANEOUSLY WITHOUT BASE-LINE SHIFT OR SIGNAL DISTORTION A69-80780
- CARDIAC REFLEXES AND FUNCTIONAL AND HISTOLOGICAL STATE OF CORTICAL NEURONS WITH EXPOSURE TO ELECTROMAGNETIC FIELDS OF SUPERHIGH FREQUENCIES IN RATS A69-80809
- ELECTRONS**  
RELATIONSHIP BETWEEN TOXICITY AND ELECTRON CONFIGURATION N69-19846
- ELECTROPHORESIS**  
CLINICAL AND ELECTROPHORETIC ANALYSIS OF LASER INDUCED CATARACTS IN IRRADIATED RABBITS EYE LENSES AD-681899 N69-21533
- ELECTROPHYSIOLOGY**  
AUDITORY SENSITIVITY OF RHESUS AND WHITE THROATED CAPUCHIN MONKEYS DETERMINED BY COMPARISON OF CONDITIONED SUPPRESSION, GALVANIC SKIN, AND EVOKED CORTICAL RESPONSES AD-681135 N69-20679
- ELECTROPLETHYSMOGRAPHY**  
EVALUATION OF TWO ATRAUMATIC METHODS OF DETERMINATION OF CARDIAC OUTPUT IN MAN - SIMULTANEOUS RECORDING OF CAROTID AND FEMORAL PULSE AND IMPEDANCE PLETHYSMOGRAPHY A69-80899
- ELECTRORETINOGRAPHY**  
DARK ADAPTATION MECHANISMS STUDIED FROM LIGHT INTENSITY RECOVERY AFTER EXPERIMENTAL FLASH, USING ELECTRORETINOGRAPHY METHODS A69-23588
- DYNAMICS OF ELECTRORETINOGRAM BETA WAVE IN CATS DURING RHYTHMIC PHOTIC STIMULATION A69-80812
- LASER-INDUCED CHANGES IN ELECTRORETINOGRAPHY OF MANGABEY AD-680913 N69-20360
- EMBEDDING**  
DIRECT EPOXY EMBEDDING OF MONOLAYER CELLS CULTURED ON MILLIPORE FILTER AND FIXED, DEHYDRATED AND MICROSCOPED BEFORE IMMERSION A69-23404
- EMBRYOLOGY**  
FROG OVA STUDIES OF EMBRYO DEVELOPMENT MECHANICS NASA-TT-F-12068 N69-21074
- EMOTIONAL FACTORS**  
MUSCLE REFLEX CHANGES UNDER EMOTIONAL STRESS IN HEALTHY HUMAN BEINGS A69-80763
- ENDOCRINE SYSTEMS**  
GLUCOSE, LACTATE, FREE FATTY ACIDS, HEPATIC GLYCOGEN AND ENDOCRINE ACTIVITY IN FASTING HIBERNATING DORMOUSE AND RAT IN DEEP HYPOTHERMIA A69-23118
- ENERGY BUDGETS**  
REACTORS TECHNICAL CHARACTERISTICS FOR HIGH TEMPERATURE MINERALIZATION OF CLOSED LIFE SYSTEMS BIOLOGICAL WASTES, DERIVING EQUATIONS TO ESTIMATE ENERGY BALANCE A69-23504
- ENERGY CONVERSION EFFICIENCY**  
EFFICIENCY OF GROWTH BY HYDROGEN BACTERIA AND GROWTH RATE LIMITING FACTORS ON EFFICIENCY OF ENERGY CONVERSION NASA-CR-100417 N69-20885
- ENERGY REQUIREMENTS**  
ENERGY REQUIRED FOR CONDITIONING INSPIRED AIR IN UPPER RESPIRATORY TRACT A69-80816
- ENERGY TRANSFER**  
EARLY DISTURBANCES IN ACTIVE MIGRATION OF POTASSIUM 42 IONS IN IRRADIATED ERYTHROCYTES IN RATS, SHOWING RELATION BETWEEN INFLUX AND ENERGY EXCHANGE IN CELLS A69-23966
- ENVIRONMENTAL CONTROL**  
WATER VAPOR REMOVAL SYSTEM FOR MANNED SPACECRAFT CABIN ENVIRONMENT CONTROL USING SILICA GLASS AD-681164 N69-20536
- ENVIRONMENTAL TESTS**  
PLASMA CORTICOSTERONE RESPONSE TO ENVIRONMENTAL STIMULATION - EFFECT OF DURATION OF STIMULATION OF 24 HOUR ADRENOCORTICAL RHYTHM IN RATS A69-80822
- HEAT TOLERANCE IN MICE IN RELATION TO HEAT ACCLIMATIZATION, AGE AND PHYSICAL CHARACTERISTICS A69-80830
- ENVIRONMENTS**  
SEMI-QUANTITATIVE TOTAL BODY SKIN CULTURE TECHNIQUE FOR PATIENTS IN PROTECTED ENVIRONMENT A69-80914
- EFFECT OF VARIOUS STORAGE AND AIRBORNE ENVIRONMENTS ON STABILITY OF T3 COLIPHAGE A69-80934
- ENZYME ACTIVITY**  
REPEATED BLOOD SAMPLING EFFECT ON PLASMA CHOLINESTERASE, ACID PHOSPHATASE, ALKALINE PHOSPHATASE AND HEMATOCRIT RATIOS IN DOMESTIC CHICKENS A69-23158
- EPINEPHRINE FORMING ENZYME PHENYLETHANOLAMINE- N-METHYL TRANSFERASE / PNMT/ IN VARIOUS BRAIN REGIONS OF RATS, CATS, HENS AND TURTLES A69-23303
- ACCELERATION EFFECTS ON CELLULAR AND SUBCELLULAR STRUCTURES ENZYME ACTIVITY IN HUMANS AND ANIMALS, NOTING CHANGES RESULTING FROM CHANGED PERMEABILITY OF MEMBRANES A69-23496

**EPIDEMIOLOGY**

**SUBJECT INDEX**

- TRANSVERSE ACCELERATIONS EFFECT ON DOGS  
GASTROINTESTINAL TRACT SECRETORY ACTIVITY, NOTING  
CENTRAL NERVOUS SYSTEM ROLE A69-23498
- RATS TOLERANCE TO IMPACT ACCELERATIONS FROM BLOOD  
ENZYME ACTIVITY PROVIDE SAFETY LIMITS FOR LIVING  
ORGANISMS A69-23500
- POLY A-POLY U SYNTHESIZED BY AZOTOBACTER  
VINELANDI RNA POLYMERASE IN UNPRIMED REACTION  
CONTAINING ATP AND UTP, FOLLOWING SHORT LAG  
PERIOD A69-24185
- D NA REPLICATION IN VIVO AS FUNCTION OF  
TEMPERATURE SENSITIVE POLYNUCLEOTIDE LIGASE MUTANT  
TH, TS A80 IN STRAND SYNTHESIS A69-24188
- TRYPTIC DIGESTION OF C TERMINAL TRITIATED  
PEPTIDES ANALYZED WITH SCENEDESMUS FERRODOXIN,  
NOTING USE FOR PROTEIN STRUCTURAL STUDY A69-24190
- INHIBITORY EFFECTS OF BARBITURATES ON  
N A D H-CYTOCHROME C OXIDOREDUCTASE IN  
RESPIRING MITOCHONDRIAL AND SUBMITOCHONDRIAL  
PREPARATIONS A69-80760
- EFFECT OF D- AND L-NOREPINEPHRINE ON RAT  
PHOSPHORYLASE ACTIVATION A69-80762
- CORRELATION BETWEEN VARIATIONS OF BLOOD AND  
PSEUDACHOLINESTERASE IN SKIERS AND PHYSICAL  
WORKLOAD PERFORMED A69-80814
- STRUCTURE AND FUNCTION OF CHLOROPLAST PROTEINS -  
RIBULOSE-1,5-DIPHOSPHATE CARBOXYLASE OF  
CHLORELLA ELLIPSOIDEA A69-80922
- EPIDEMIOLOGY**  
EPIDEMIOLOGY OF AERIAL APPLICATION ACCIDENTS  
ANALYZED IN GROUPS OF HIGH AND LOW WING  
MONOPLANES, BIPLANES AND HELICOPTERS A69-22554
- EPILEPSY**  
EPILEPSY ACQUIRED BY 25 YEAR OLD JET FIGHTER  
PILOT, NOTING CARDIOVASCULAR ABNORMALITIES A69-22728
- CASE STUDY OF ACQUIRED EPILEPSY IN FIGHTER  
PILOT A69-80897
- ANTICHOLINERGIC DRUGS AFFECTING EPILEPTIC  
ACTIVITY FROM AMYGDALA AND FRONTAL CORTEX IN  
RHESUS MONKEYS A69-80940
- EPINEPHRINE**  
EPINEPHRINE FORMING ENZYME PHENYLETHANOLAMINE- N-  
METHYL TRANSFERASE / PNMT/ IN VARIOUS BRAIN  
REGIONS OF RATS, CATS, HENS AND TURTLES A69-23303
- ERGOMETERS**  
DESCRIPTION OF ERGOMETER FOR EXERCISING HUMANS  
DURING CALDRIMETRIC STUDIES IN CLIMATIC CHAMBER A69-80783
- ERYTHROCYTES**  
STRUCTURAL AND FUNCTIONAL CHANGES IN CELLS AS  
RESULT OF FREEZING OF MUSCULAR TISSUE OR  
SUSPENSION OF ERYTHROCYTES A69-23117
- EARLY DISTURBANCES IN ACTIVE MIGRATION OF  
POTASSIUM 42 IONS IN IRRADIATED ERYTHROCYTES IN  
RATS, SHOWING RELATION BETWEEN INFLUX AND ENERGY  
EXCHANGE IN CELLS A69-23966
- ESCHERICHIA**  
DETERMINATION OF FREE PHOSPHATE GROUPS IN E. COLI  
RIBOSOMES BY OPTICAL METHODS NASA-TT-F-12118 N69-21080
- EUGLENA**  
EUGLENA GRACILIS GROWN HETEROTROPHICALLY,  
INVESTIGATING RESPIRATORY PHYSIOLOGY AS FUNCTION  
OF GLUCOSE, ACETATE OR ETHANOL GROWTH SUPPORTING  
CARBON SOURCE A69-24186
- EUROPE**  
SCIENTIFIC RESEARCH IN MEDICINE, COMPUTERS, ETC.  
IN EASTERN EUROPE JPRS-47526 N69-20319
- EVALUATION**  
MILITARY-MEDICAL EXAMINATION AND DISABILITY  
EVALUATIONS IN RELATION TO HEARING AND NOISE  
INJURY A69-80829
- SUMMARY OF RESULTS OF TEST EVALUATING TACTILE  
TELEVISION SYSTEM AS VISION SUBSTITUTE FOR  
BLIND A69-80933
- DESIGN AND EVALUATION OF VACUUM CLEANING SYSTEM  
FOR ISOLATION CHAMBERS A69-80936
- EXCITATION**  
SPATIAL AND LUMINANCE FACTORS DETERMINING  
VISUAL EXCITABILITY IN HUMANS A69-80765
- EXCRETION**  
RAPID GLOBAL TRANSPORTATION EFFECT ON CIRCADIAN  
RHYTHMIC PATTERNS IN HUMAN BODY FUNCTIONS,  
DISCUSSING KIDNEY EXCRETION AND PITUITARY ADRENAL  
CORTICAL SYSTEM A69-22545
- EXCRETION OF 17-HYDROXYCORTICOSTEROIDS AND  
VANILLYLMADELIC ACID DURING 205 HOURS OF SLEEP  
DEPRIVATION IN MAN A69-80825
- URINE FLOW RATE IN RELATION TO UREA REABSORPTION  
IN HUMAN NEPHRON A69-80881
- EXO BIOLOGY**  
ANIMALS IN WEIGHTLESS STATE, NOTING VIGILANCE,  
ATTENTION, SENSORIAL AND MOTOR REACTION TIME,  
MUSCULAR TONE AT REST AND MUSCLES ELECTRICAL  
ACTIVITY IN MOVEMENT A69-22721
- PRIMATES FOR SPACE RESEARCH, DISCUSSING SELECTION,  
PURCHASE, HANDLING AND USE AS CONTROLS IN  
OBSERVATIONS OF DISORDERS EXPERIENCED BY MAN A69-22723
- EXPECTATION**  
REVIEW OF RECENT EVIDENCE CONCERNING ROLE OF  
ANTICIPATION AND TIMING IN HUMAN MOTOR  
PERFORMANCE A69-80847
- EXPERIMENTAL DESIGN**  
DESIGN ASPECTS OF EXPERIMENTAL FLUIDIC CONTROL  
SYSTEM PB-180954 N69-21174
- EXPIRATION**  
VENTILATORY MECHANICS AND EXPIRATORY FLOW  
LIMITATION DURING EXERCISE IN NORMAL SUBJECTS A69-80907
- EXTRAVEHICULAR ACTIVITY**  
CORRELATION STUDY OF SIMULATION OF GEMINI  
EXTRAVEHICULAR ACTIVITY WITH FLIGHT RESULTS  
NASA-CR-1146 N69-19902
- EYE (ANATOMY)**  
PULSED AND CW MICROWAVE POWER EFFECTS ON RABBIT  
EYES, NOTING LENS OPACITIES PRODUCED A69-23185
- OCULAR INJURIES DURING BAILOUT FROM VAMPIRE  
AIRCRAFT, NOTING HEMORRHAGES A69-23380
- PHYSIOLOGICAL EFFECTS AND OPTICAL PERCEPTION IN  
EYE MUSCLE DISTURBANCE DUE TO FLIGHT STRESS  
NASA-TT-F-12105 N69-21132
- FOURIER TRANSFORMATIONS APPLICATIONS ON CONTRAST  
SENSITIVITY FUNCTIONS OF HUMAN EYES IZF-1968-20 N69-21343
- CLINICAL AND ELECTROPHORETIC ANALYSIS OF LASER  
INDUCED CATARACTS IN IRRADIATED RABBITS EYE  
LENSES AD-681899 N69-21533
- EYE OPACITIES IN FLYING PERSONNEL AT AEROSPACE  
MEDICINE SCHOOL AD-682286 N69-21622

SUBJECT INDEX

FLOW VELOCITY

- EYE SAFETY NOMOGRAPHS OF PULSED LASER RETINAL DAMAGE PROBABILITIES  
AD-681906 N69-21690
- EYE MOVEMENTS**  
SMALL EYE MOVEMENTS MEASUREMENT AND RETINAL IMAGE STABILIZATION BASED ON TRACKING EDGE OF BLOOD VESSEL IN OPTIC DISK A69-21908
- ELECTROOCULOGRAPHIC METHOD TO STUDY EYE MOVEMENTS CONTROL SYSTEM FOR FIXATION ON STATIONARY POINT OR FOLLOWING DISCRETELY OR CONTINUOUSLY MOVING TARGET A69-22675
- EXPLANATION OF AUTOKINETIC ILLUSION BASED ON DEFINITION OF EYE-POSITION SUPPORTING DISPLACEMENT CONCEPT OF MOTION A69-80794
- MUSCULAR MECHANICS IN HUMAN EYE MOVEMENTS A69-80877
- MONOCULAR ESTIMATES OF DISTANCE AND DIRECTION WITH STABILIZED AND NON-STABILIZED RETINAL IMAGES A69-80944
- INPUT-OUTPUT RELATIONS OF OPTOKINETIC EYE MOVEMENTS IN RABBITS SUBJECTED TO CONSTANT ROTATION OR SINUSOIDAL MOVEMENT OF SURROUNDINGS A69-80945
- MONOCULAR EYE MOVEMENTS OF RESTRAINED AND PARTIALLY RESTRAINED PIGEONS A69-80946
- SIGNAL DETECTION AFFECTED BY SACCADIC EYE MOVEMENT IN PURSUIT TRACKING TASK A69-80950
- EFFECTS OF EYE MOVEMENTS ON VISUAL ACUITY AND SPATIAL LOCALIZATION N69-20048
- F**
- FABRICS**  
FACTORS EFFECTING SURVIVAL OF STAPHYLOCOCCUS AUREUS ON VARIOUS TYPES OF FABRICS A69-80935
- FATIGUE (BIOLOGY)**  
REDUCTION OF ENDURANCE CAPACITY DURING PHYSICAL EXERCISE AT VARIOUS ALTITUDES A69-80901
- FATTY ACIDS**  
GLUCOSE, LACTATE, FREE FATTY ACIDS, HEPATIC GLYCOGEN AND ENDOCRINE ACTIVITY IN FASTING HIBERNATING DORMOUSE AND RAT IN DEEP HYPOTHERMIA A69-23118
- TEMPERATURE EFFECT ON VOLATILE ACID CONTENT IN SEEDS AND LEAVES OF OIL-BEARING PLANTS NASA-TT-F-12125 N69-19646
- FEEDBACK CONTROL**  
ACTIVE BROADBAND VIBRATION ISOLATION OF HUMAN SUBJECTS FROM SEVERE VERTICAL DYNAMIC EXCITATIONS EXPERIENCED IN LOW LEVEL HIGH SPEED FLIGHT ASME PAPER 69-VIBR-65 A69-24157
- FEEDING (SUPPLYING)**  
PORTABLE, MULTIUNIT LOW-PRESSURE CHAMBER WITH LOCKS FACILITATING INTRODUCTION AND REMOVAL OF FOOD DISHES AND REPLENISHING DRINKING WATER DURING LONG-TERM ANIMAL EXPOSURE A69-80778
- FLASH BLINDNESS**  
CALCULATION OF SAFE SEPARATION DISTANCES FOR HUMAN FROM NUCLEAR EXPLOSION TO PREVENT FLASH BLINDNESS AND RETINAL BURN AD-680842 N69-20288
- FLEXIBLE BODIES**  
NONFLAMMABLE MATERIALS CAPABLE OF FABRICATION INTO FLEXIBLE OXYGEN HOSE FOR SPACECRAFT LIFE SUPPORT SYSTEM NASA-CR-99541 N69-19700
- FLEXORS**  
EFFECT OF EXPERIMENTAL HYPOTHERMIA ON SUMMATION PROCESSES RELATED TO STIMULATION AND LABILITY OF
- CENTRAL FLEXOR REFLEX SYSTEM IN CATS A69-80855
- FLICKER**  
CEREBRAL DYSFUNCTION AND FLICKER DETECTION - ROLE OF RETINAL ADAPTATION A69-80796
- FLIGHT CLOTHING**  
HEAT DEVELOPMENT MEASUREMENTS ON WHITE AND GREEN FLIGHT HELMETS TOCK-52198-III N69-21707
- FLIGHT CONTROL**  
PERIPHERAL VISION CUES AND EFFECT ON PILOT PERFORMANCE DURING INSTRUMENT LANDING APPROACH AND RECOVERY FROM UNUSUAL ATTITUDES AM-68-12 N69-20298
- FLIGHT CREWS**  
HEAD INJURIES EVALUATION IN AIRCREW, NOTING MOTOR CYCLE ACCIDENTS A69-23378
- AIRCREW INCAPACITATION DURING HIGH ALTITUDE FLYING FOLLOWING PARTIAL GASTRECTOMY, DISCUSSING AEROMEDICAL EVALUATION A69-23381
- ACUTE RESPIRATORY INFECTIONS IN AIRCREW UNDER TRAINING WITH SPECIAL REFERENCE TO INFLUENZA AND ADENOVIRUS INFECTIONS A69-80827
- PROBABILITY MODEL FOR FLIGHT CREW DEPLOYMENT AD-680763 N69-20134
- FACTORS INFLUENCING FLIGHT CREW PERFORMANCE AD-681239 N69-20303
- YELLOW LENS FOR AIRCREWS ON DEFOILIATION MISSIONS IN SOUTHEAST ASIA AD-681119 N69-20534
- EYE OPACITIES IN FLYING PERSONNEL AT AEROSPACE MEDICINE SCHOOL AD-682286 N69-21622
- FLIGHT FITNESS**  
BLOOD PRESSURE FLUCTUATIONS IN MULTIPLE EXTRA SYSTOLES DURING TILT TABLE STUDIES FOR FLYING FITNESS OF PILOT A69-23379
- AIRCREW INCAPACITATION DURING HIGH ALTITUDE FLYING FOLLOWING PARTIAL GASTRECTOMY, DISCUSSING AEROMEDICAL EVALUATION A69-23381
- CARE OF AIRCREWMEN UNDER COMPANY OCCUPATIONAL HEALTH PROGRAMS A69-80752
- FLIGHT SIMULATORS**  
HUMAN PILOT ADAPTATION IN SIMULATED MULTILoop VTOL HOVERING TASK WITH SERIES LOOP CLOSURE MODEL A69-23878
- VISUAL FLIGHT SIMULATOR MODIFICATIONS AD-681175 N69-20603
- FLIGHT STRESS (BIOLOGY)**  
BLOOD GLUCOSE MEASURED BEFORE, DURING AND AFTER HIGH PERFORMANCE AIRCRAFT FLIGHT FOR OCCURRENCE OF FASTING HYPOLYCEMIA A69-22555
- PHYSIOLOGICAL EFFECTS AND OPTICAL PERCEPTION IN EYE MUSCLE DISTURBANCE DUE TO FLIGHT STRESS NASA-TT-F-12105 N69-21132
- FLIGHT TIME**  
LAUNCH-MAN SEQUENCING FOR EXTENDED MISSION EFFECTIVENESS STUDY NASA-CR-100321 N69-19608
- FLOW MEASUREMENT**  
BLOODLESS HEART FLOW MEASUREMENT METHODS, NOTING SIMULTANEOUS EXTERNAL RECORDING OF CAROTID AND FEMORAL PULSES AND IMPEDANCE PLETHYSMOGRAPHY A69-22730
- FLOW VELOCITY**  
BLOODLESS HEART FLOW MEASUREMENT METHODS, NOTING SIMULTANEOUS EXTERNAL RECORDING OF CAROTID AND FEMORAL PULSES AND IMPEDANCE PLETHYSMOGRAPHY A69-22730

## FLOWMETERS

## SUBJECT INDEX

## FLOWMETERS

BALANCED FIELD-TYPE ELECTROMAGNETIC FLOWMETER WHICH PERMITS MEASUREMENTS OF SEVERAL BLOOD FLOWS SIMULTANEOUSLY WITHOUT BASE-LINE SHIFT OR SIGNAL DISTORTION A69-80780

## FLUIDICS

DESIGN ASPECTS OF EXPERIMENTAL FLUIDIC CONTROL SYSTEM PB-180954 N69-21174

## FLUORESCENCE

QUANTUM YIELD AND ACTION SPECTRUM OF PHOTOSYNTHESIS AND FLUORESCENCE IN CHLORELLA PYRENOIDOSA A69-80871

LIGHT-INDUCED CHANGES IN FLUORESCENCE YIELD OF CHLOROPHYLL A IN VIVO - DIP AND PEAK IN FLUORESCENCE TRANSIENT OF CHLORELLA PYRENOIDOSA A69-80911

LIGHT-INDUCED CHANGES IN FLUORESCENCE OF CHLOROPHYLL A IN VIVO - EFFECT OF PREILLUMINATION ON FLUORESCENCE TRANSIENT OF CHLORELLA PYRENOIDOSA A69-80912

## FLUORINE

TOXIC EFFECTS OF FLUORINE FOLLOWING SHORT TERM INHALATION BY ANIMALS AND HUMANS NASA-CR-100415 N69-20915

## FLYING PERSONNEL

AMPLITUDE VARIATIONS IN ULF BALLISTOCARDIOGRAMS OF YOUNG NORMAL AIRLINE STEWARDESSES AND APPLICANTS, DISCUSSING CARDIOVASCULAR REACTIVITY A69-22544

SYSTOLIC MURMURS AND FLIGHT PERSONNEL EVALUATION, NOTING PHONOCARDIOGRAPHIC DEFINITION AND TRACINGS OF SPECIFIC SYSTOLIC MURMURS A69-22726

PARASITIC CALCIFICATIONS OF SOFT PARTS IN FLIGHT PERSONNEL STUDIED RADIOLOGICALLY, NOTING FILARIASIS, BILHARZIASIS AND WORMS A69-22729

USE OF PHONOCARDIOGRAPHY FOR DETECTION OF ABNORMAL SYSTOLIC MURMURS IN AEROMEDICAL EVALUATION OF FLYING PERSONNEL A69-80895

## FOOD

HYDROGENOMONAS EUTROPHA AS MEANS OF PROTEIN FOOD SOURCE INDEPENDENT OF CONVENTIONAL AGRICULTURE FOR ANIMAL FEED SUPPLEMENT A69-23306

## FOOD INTAKE

LIVER AND KIDNEY METABOLISM IN OBESE PATIENTS DURING PROLONGED STARVATION A69-80908

AMINO ACID METABOLISM DURING PROLONGED STARVATION IN OBESE PATIENTS A69-80909

## FOURIER TRANSFORMATION

FOURIER TRANSFORMATIONS APPLICATIONS ON CONTRAST SENSITIVITY FUNCTIONS OF HUMAN EYES IZF-1968-20 N69-21343

## FRACTIONATION

FRACTIONATION OF DISTANCE IN SPACE ENVIRONMENT SIMULATION NASA-CR-73306 N69-20224

## FRAGMENTATION

FRAGMENTATION OF PATTERNS OCCURRING WITH TACHISTOSCOPIC PRESENTATION NPL-COM-SCI-40 N69-21266

## FRANCE

SURVEY OF STRONTIUM 90 CONTENT OF HUMAN BONES COLLECTED IN PARIS AREA CEA-R-3681 N69-20639

## FREEZING

STRUCTURAL AND FUNCTIONAL CHANGES IN CELLS AS RESULT OF FREEZING OF MUSCULAR TISSUE OR SUSPENSION OF ERYTHROCYTES A69-23117

## FRICTION MEASUREMENT

WATER TANK DEVELOPMENT OF ORGANISMS AND THEIR USE

AS DRAG REDUCING AGENTS NPL-SHIP-130 N69-21264

## FROGS

SIMULATED WEIGHTLESSNESS USED IN DETERMINING ONTOGENESIS OF OTOLITH ORGAN IN TADPOLES AND EGGS AS FUNCTION OF ACCELERATION FORCES DVL-855 A69-24021

ENDOGENOUS RESPIRATION AND UREA PRODUCTION OF LIVER TISSUE FROM HIBERNATING AND NON-HIBERNATING HEDGEHOGS AND FROM FROGS ACCLIMATED TO DIFFERENT AMBIENT TEMPERATURES A69-80764

FROG OVA STUDIES OF EMBRYO DEVELOPMENT MECHANICS NASA-TT-F-12068 N69-21074

DEVELOPMENT OF CONGENITAL ANOMALIES IN FROG EGGS NASA-TT-F-12049 N69-21144

## FUEL OILS

MICROORGANISM GROWTH WITH PETROLEUM FUELS AD-680804 N69-20205

## FUNGI

SEMI-QUANTITATIVE TOTAL BODY SKIN CULTURE TECHNIQUE FOR PATIENTS IN PROTECTED ENVIRONMENT A69-80914

## G

## GALVANIC SKIN RESPONSE

HABITUATION OF ORIENTING RESPONSE TO MULTIPLE STIMULUS SEQUENCES A69-80838

## GAMMA RAYS

EFFECT OF MIXED GAMMA-NEUTRON RADIATIONS ON SPECTRAL ABSORPTION OF INDOCYANINE GREEN AD-681372 N69-20703

MEASUREMENT OF GAMMA EXPOSURE RATE IN NATURAL RADIATION ENVIRONMENT BY SPECTROMETRY RT/FI/68/54 N69-20987

NITROGEN COMPOUNDS EXCRETION FROM WHOLE-BODY GAMMA IRRADIATED RAT LARGE INTESTINE IN ABSENCE OF STRESS NIJS-R-544 N69-21146

DOSIMETRY OF GAMMA RADIATION EXPOSURE OF PERSONNEL AE-342 N69-21310

DOSE RATE EFFECTS ON MICE EXPOSED TO COBALT 60 GAMMA IRRADIATION AD-682288 N69-21609

## GAS EVOLUTION

GAS VACUOLES DEVELOPMENT IN BLUE GREEN ALGAE BY CELL TRANSFER FROM DEFINED MEDIUM TO DISTILLED WATER A69-23184

MODEL OF NITROGEN FIXATION SYSTEM TO STUDY DEPENDENCE OF HYDROGEN LIBERATION ON TEMPERATURE IN CELL-FREE CULTURES OF AZOTOBACTER VINELANDII A69-80862

## GAS FLOW

THEORY OF BODY TISSUE GAS SATURATION AND DESATURATION IN LINEAR EQUATIONS DEVELOPED IN TERMS OF ELECTRICAL ANALOGS DRET-620 N69-21406

## GAS LASERS

CORNEAL INJURY PRODUCED BY CARBON DIOXIDE LASER RADIATION AD-680915 N69-20524

## GAS MIXTURES

NITROGEN CONTENT IN SPACECRAFT CABIN ATMOSPHERES N69-21663

## GASTROINTESTINAL SYSTEM

TRANSVERSE ACCELERATIONS EFFECT ON DOGS GASTROINTESTINAL TRACT SECRETORY ACTIVITY, NOTING CENTRAL NERVOUS SYSTEM ROLE A69-23498

- GEMINI SPACECRAFT**  
CORRELATION STUDY OF SIMULATION OF GEMINI  
EXTRAVEHICULAR ACTIVITY WITH FLIGHT RESULTS  
NASA-CR-1146 N69-19902
- GENETICS**  
SOMATIC CHROMOSOMES STUDY OF MONGOLIAN GERBILS  
NASA-CR-100458 N69-21149
- GERMINATION**  
STUDY OF INDUCTORS AND THEIR EFFECTS ON INDUCTION  
OF DORSIVENTRALITY IN GERMINATING BROOD BODIES

## HEART RATE

## SUBJECT INDEX

## HEART RATE

TILT-TABLE AND ACCELERATION TOLERANCE OF ATHLETES AND INACTIVE STUDENTS, COMPARING CARDIOVASCULAR RESPONSES, HEART RATE AND BLACKOUT LEVEL  
DVL-834 A69-21304

PHYSIOLOGICAL EFFECTS OF BREATHING COOL DEHUMIDIFIED AIR IN HOT HUMID ENVIRONMENT, TABULATING TOLERANCE TIME, HEART RATE, TEMPERATURE CHANGES AND SWEAT LOSS A69-22543

DOGS ORTHOSTATIC TOLERANCE AND RESISTANCE TO TRANSVERSE ACCELERATION AFTER 14-DAY HYPODYNAMIA, STUDYING TACHYCARDIA AND ARTERIAL PRESSURE A69-23499

BED REST EFFECT ON ORTHOSTATIC TOLERANCE OF PATIENTS WITH ACUTE MYOCARDIAL INFARCTION AND WITHOUT HEART FAILURE A69-24189

DIFFERENTIAL OPERANT CONDITIONING OF HEART RATE IN NORMAL SUBJECTS A69-80831

HUMAN HEART RATE RESPONSE TO DIFFERENT INTENSITIES OF SOUND AND LIGHT A69-80833

STIMULUS DETECTION DURING PERIODS OF HIGH AND LOW HEART RATE A69-80837

CHOLINERGIC DIFFERENCES AND HEART RATE IN TRAINED AND NONTRAINED HYPOPHYSECTOMIZED RATS A69-80880

CARDIAC RATE IN RELATION TO AEROBIC CAPACITY FOR WORK IN OLYMPIC ATHLETES AND NORMAL HUMANS A69-80928

## HEAT MEASUREMENT

HEAT DEVELOPMENT MEASUREMENTS ON WHITE AND GREEN FLIGHT HELMETS  
TDCK-52198-III N69-21707

## HEAT TOLERANCE

HEAT SUSCEPTIBILITY AND TOLERANCE IN ASTRONAUTS OBTAINED BY PLOT OF SKIN AND ORAL TEMPERATURES FOR SUBJECT UNDER THERMAL STRESS A69-23376

HEAT AND HUMIDITY ENDURANCE LIMITS IN MAN A69-23494

HEAT TOLERANCE OF EXERCISING OBESE AND LEAN WOMEN WHILE EXPOSED TO SIX DIFFERENT ENVIRONMENTAL TEMPERATURES A69-80771

COMPARISON OF THERMOREGULATORY FUNCTION IN HEAT ACCLIMATIZED AND NONACCLIMATIZED MEN AND WOMEN A69-80776

HEAT TOLERANCE IN MICE IN RELATION TO HEAT ACCLIMATIZATION, AGE AND PHYSICAL CHARACTERISTICS A69-80830

INCREASE OF HUMAN TOLERANCE TO HIGH TEMPERATURE ENVIRONMENTS WITH PHYSICAL TRAINING AND ADAPTATION TO HYPOXIA AT SIMULATED ALTITUDE A69-80860

SPORULATION, HEAT RESISTANCE AND METABOLIC PROPERTIES OF CLOSTRIDIUM PERFRINGENS A69-80937

## HELIUM

OXYGEN AND CARBON MONOXIDE EQUILIBRIA OF HUMAN HEMOGLOBIN AT ELEVATED PRESSURE WITH AND WITHOUT NITROGEN-SUBSTITUTED HELIUM A69-80920

## HELMETS

HEAT DEVELOPMENT MEASUREMENTS ON WHITE AND GREEN FLIGHT HELMETS  
TDCK-52198-III N69-21707

## HEMATOCRIT RATIO

REPEATED BLOOD SAMPLING EFFECT ON PLASMA CHOLINESTERASE, ACID PHOSPHATASE, ALKALINE PHOSPHATASE AND HEMATOCRIT RATIOS IN DOMESTIC CHICKENS A69-23158

## HEMATOLOGY

INCREASED CHRONIC ACCELERATION PHYSIOLOGICAL EFFECTS ON CHICKENS, COMPARING HEMATOLOGICAL OBSERVATIONS WITH EXERCISE CAPACITY, SURVIVAL AND SEXUAL DEVELOPMENT A69-23041

REPEATED BLOOD SAMPLING EFFECT ON PLASMA CHOLINESTERASE, ACID PHOSPHATASE, ALKALINE PHOSPHATASE AND HEMATOCRIT RATIOS IN DOMESTIC CHICKENS A69-23158

RADIATION EFFECTS FROM PROTON BEAMS IN RHESUS MONKEYS USING HEMATOLOGY STUDIES  
AD-681465 N69-21528

## HEMATOPOIESIS

EVALUATION OF PROLIFERATIVE AND MATURATIVE ACTIVITY ON RABBIT BONE MARROW DURING BENZENE INTOXICATION A69-80759

## HEMODYNAMIC RESPONSES

HEMODYNAMIC EFFECTS OF CHANGES IN BLOOD VOLUME DURING INTERMITTENT POSITIVE-PRESSURE VENTILATION A69-80818

EFFECT OF POSTURAL CHANGES ON TONUS IN MAIN ARTERIAL VASCULAR SYSTEM IN MAN A69-80857

## HEMOGLOBIN

OXYGEN AND CARBON MONOXIDE EQUILIBRIA OF HUMAN HEMOGLOBIN AT ELEVATED PRESSURE WITH AND WITHOUT NITROGEN-SUBSTITUTED HELIUM A69-80920

## HEMORRHAGES

OCULAR INJURIES DURING BAILOUT FROM VAMPIRE AIRCRAFT, NOTING HEMORRHAGES A69-23380

CONTINUOUS POSITIVE-PRESSURE BREATHING IN ACUTE HEMORRHAGIC EDEMA IN DOGS A69-80774

## HETEROTROPHS

EUGLENA GRACILIS GROWN HETEROTROPHICALLY, INVESTIGATING RESPIRATORY PHYSIOLOGY AS FUNCTION OF GLUCOSE, ACETATE OR ETHANOL GROWTH SUPPORTING CARBON SOURCE A69-24186

GRAPH THEORY APPLIED TO AQUATIC ORGANISM COMMUNITIES  
JPRS-47689 N69-21455

## HEURISTIC METHODS

DYNAMIC MANIPULATION OF HEURISTICS AS PRODUCTION RULES FOR COMPUTER PROGRAMS, AND PROBLEM SOLVING MACHINE LEARNING  
AD-681027 N69-20483

## HIBERNATION

GLUCOSE, LACTATE, FREE FATTY ACIDS, HEPATIC GLYCOGEN AND ENDOCRINE ACTIVITY IN FASTING HIBERNATING DORMOUSE AND RAT IN DEEP HYPOTHERMIA A69-23118

HIBERNATION SEASONALITY, PROTEIN SYNTHESIS DURING PERIODIC AWAKENINGS AND IMPORTANCE OF AWAKENINGS TO MAINTENANCE AND EVOLUTION OF THYROID ACTIVITY A69-23120

COMPUTER ANALYSIS OF CORTICAL AND SUBCORTICAL ACTIVITY IN YELLOW BELLIED MARMOT DURING SLEEP, HIBERNATION AND HYPOTHERMIA A69-23122

RADIATION RESISTANCE OF ANIMALS IN HIBERNATION AND HYPOTHERMIA, NOTING TEMPERATURE DEPENDENCE OF PROTECTIVE EFFECT A69-23126

ENDOGENOUS RESPIRATION AND UREA PRODUCTION OF LIVER TISSUE FROM HIBERNATING AND NON-HIBERNATING HEDGEHOGS AND FROM FROGS ACCLIMATED TO DIFFERENT AMBIENT TEMPERATURES A69-80764

## HIGH ALTITUDE

REDUCTION OF ENDURANCE CAPACITY DURING PHYSICAL EXERCISE AT VARIOUS ALTITUDES A69-80901

CHANGES IN BLOOD PRESSURE OF TRAINED AND UNTRAINED SUBJECTS DURING EXERCISE AT VARIOUS

## SUBJECT INDEX

## HUMAN PERFORMANCE

ALTITUDES A69-80902

COMPACT BELLOWS SPIROMETER FOR HIGH SPEED AND HIGH ALTITUDE SPACE TRAVEL NASA-CASE-XAR-01547 N69-21473

HIGH ALTITUDE ENVIRONMENTS

MONKEY BEHAVIOR IN HIGH ATMOSPHERE UNDER WEIGHTLESS CONDITIONS, DISCUSSING PROBLEMS CONNECTED WITH BIOLOGICAL MEASUREMENTS, LOGIC SYSTEMS AND VIBRATION PROTECTION A69-22722

MOISTURE LOSSES OF MEN WEARING PARTIAL PRESSURE SUIT WITH OXYGEN MASK DETERMINED BY CHANGES IN SKIN TEMPERATURE AND HEAT FLOW A69-23591

REVIEW OF CURRENT PROBLEMS IN HIGH ALTITUDE PHYSIOLOGY A69-80839

HIGH SPEED

COMPACT BELLOWS SPIROMETER FOR HIGH SPEED AND HIGH ALTITUDE SPACE TRAVEL NASA-CASE-XAR-01547 N69-21473

HIGH TEMPERATURE ENVIRONMENTS

HEAT TOLERANCE OF EXERCISING OBESE AND LEAN WOMEN WHILE EXPOSED TO SIX DIFFERENT ENVIRONMENTAL TEMPERATURES A69-80771

ADAPTATION OF CARDIOVASCULAR SYSTEM TO HOT DRY ENVIRONMENTS IN TRAINED AND UNTRAINED YOUNG SUBJECTS DURING MODERATE EXERCISE A69-80813

RELATIONSHIP OF HYPNOSIS AND MOTIVATION ON PSYCHOMOTOR PERFORMANCE IN EXTREME HEAT A69-80870

HIGH TEMPERATURE RESEARCH

PERFORMANCE AND CAVITATION DAMAGE TO AXIAL FLOW PUMP ROTOR BLADES IN HIGH TEMPERATURE LIQUID SODIUM NASA-TN-D-5138 N69-21773

HILSCH TUBES

RANQUE VORTEX TUBE AS COOLING DEVICE IN VENTILATING GARMENT MA-3 A69-22550

HISTOLOGY

STRUCTURAL AND FUNCTIONAL CHANGES IN CELLS AS RESULT OF FREEZING OF MUSCULAR TISSUE OR SUSPENSION OF ERYTHROCYTES A69-23117

HOMEOOTHERMS

HIGH TEMPERATURE ACCLIMATION, CLIMATES WITH HEAT DISSIPATION PROBLEMS AND HIBERNATION OR TORPOR EFFECTS ON METABOLIC DEPRESSION IN HOMEOOTHERMS A69-23121

HORMONE METABOLISMS

HIBERNATION SEASONALITY, PROTEIN SYNTHESIS DURING PERIODIC AWAKENINGS AND IMPORTANCE OF AWAKENINGS TO MAINTENANCE AND EVOLUTION OF THYROID ACTIVITY A69-23120

HORMONES

EFFECT OF CHICKEN AND HOG CALCITONIN ON SOME PARAMETERS OF CALCIUM, PHOSPHORUS, AND MAGNESIUM METABOLISM IN DOGS A69-80910

HOSES

NONFLAMMABLE MATERIALS CAPABLE OF FABRICATION INTO FLEXIBLE OXYGEN HOSE FOR SPACECRAFT LIFE SUPPORT SYSTEM NASA-CR-99541 N69-19700

HOVERING

HUMAN PILOT ADAPTATION IN SIMULATED MULTILOOP VTOL HOVERING TASK WITH SERIES LOOP CLOSURE MODEL A69-23878

HUMAN BEHAVIOR

HUMAN ADAPTATION TO VARIOUS ENVIRONMENTS, EMPHASIZING EXPERIMENTAL SPACE PSYCHONEUROLOGY ROLE IN HUMAN BEHAVIOR EXAMINATIONS DURING SPACE MISSIONS A69-23587

HUMAN BEINGS

VISUAL BACKWARD MASKING OF SINGLE TARGET LINE BY SINGLE MASKING LINE - SIGNAL DETECTABILITY WITH CONTOUR CONTROL A69-80951

NOISE AND TOXIC AGENTS EFFECT ON INNER EAR OF ANIMALS AND HUMAN BEINGS AD-681834 N69-21860

HUMAN BODY

HUMAN BODY TEMPERATURE REGULATING FACTORS IN LOW TEMPERATURE ENVIRONMENT, STUDYING METABOLISM, LUNG VENTILATION AND ONSET OF SHUDDERING A69-23298

INDUCTION AND REJOINING OF BREAKS IN DEOXYRIBONUCLEIC ACID OF HUMAN CELLS AT VARIOUS PHASES OF CELL CYCLE MBL-1968-15 N69-21286

THEORY OF BODY TISSUE GAS SATURATION AND DESATURATION IN LINEAR EQUATIONS DEVELOPED IN TERMS OF ELECTRICAL ANALOGS DRET-620 N69-21406

HUMAN FACTORS ENGINEERING

HUMAN ENGINEERING PROGRAM AT EARLY DESIGN PHASE OF SST AIRCRAFT TO ACHIEVE MAXIMUM HUMAN EFFICIENCY AND MAN MACHINE COMPATIBILITY A69-22546

NEUROLOGICAL CHANGES IN MEN DUE TO HYPOKINESIA, ANALYZING TREMOR DATA, EEG RECORDINGS AND STABILOGRAPHY FLUCTUATIONS A69-23585

EFFECT OF HIGH CARBON DIOXIDE CONCENTRATION ON BLOOD SEROTONIN IN MAN AD-681501 N69-21551

HUMAN PATHOLOGY

PRIMATES FOR SPACE RESEARCH, DISCUSSING SELECTION, PURCHASE, HANDLING AND USE AS CONTROLS IN OBSERVATIONS OF DISORDERS EXPERIENCED BY MAN A69-22723

HUMAN PERFORMANCE

MILD HYPOXIA EFFECT ON SELECTIVE ATTENTION PERFORMANCE OF HUMAN SUBJECTS AT SIMULATED 8000 FT ALTITUDE A69-22553

SYSTOLIC MURMURS AND FLIGHT PERSONNEL EVALUATION, NOTING PHONOCARDIOGRAPHIC DEFINITION AND TRACINGS OF SPECIFIC SYSTOLIC MURMURS A69-22726

STIMULI HUMAN SUBJECTS CAN IDENTIFY ON UNIDIMENSIONAL VISUAL STIMULUS CONTINUUM, DISCUSSING APPARATUS AND LINE LENGTH INFLUENCE A69-23039

CONTROL OPERATION TIME FOUND DEPENDENT ON GLOVES, PHYSICAL CHARACTERISTICS OF CONTROL AND TYPE OF REQUIRED OPERATION A69-23180

GLOVE CHARACTERISTICS EFFECTS ON MANIPULABILITY, FINDING OPERATION TIME DIFFERENCES BETWEEN GLOVED AND BAREHANDED OPERATION DEPENDENT ON TYPE OF REQUIRED CONTROL OPERATION A69-23181

E EG, HEART BEAT, RESPIRATION RATES, BODY TEMPERATURE, MOTOR ACTIVITY, PHYSICAL AND MENTAL EFFICIENCY OF MAN DURING ANECHOIC CHAMBER CONFINEMENT A69-23510

MOISTURE LOSSES OF MEN WEARING PARTIAL PRESSURE SUIT WITH OXYGEN MASK DETERMINED BY CHANGES IN SKIN TEMPERATURE AND HEAT FLOW A69-23591

HUMAN INFORMATION PROCESSING RATES DURING ONE AND TWO AXIS COMPENSATORY TRACKING TASKS WITH SECONDARY AUDITORY TASK A69-23880

COUPLING EFFECTS AND PERFORMANCE IN AUDITORY AND VISUAL VIGILANCE TASKS AD-680912 N69-20236

FACTORS INFLUENCING FLIGHT CREW PERFORMANCE AD-681239 N69-20303

ANOMALOUS PREDICTION OF MACHINE GENERATED RANDOM NUMBERS BY HUMAN SUBJECTS

**HUMAN REACTIONS**

- IMMUNITY**  
EFFECTS OF HIGH AND LOW BAROMETRIC PRESSURES ON  
SUSCEPTIBILITY AND RESISTANCE TO INFECTION IN  
MICE  
NASA-CR-100360  
N69-20009
- IMPACT ACCELERATION**  
RATS TOLERANCE TO IMPACT ACCELERATIONS FROM BLOOD

## IN-FLIGHT MONITORING

ENZYME ACTIVITY PROVIDE SAFETY LIMITS FOR LIVING ORGANISMS A69-23500

## IN-FLIGHT MONITORING

COMPUTER PROGRAM FOR ONBOARD MEDICAL CHECKUPS OF SPACECRAFT CREWS DURING EXTENDED SPACE FLIGHTS, DISCUSSING TESTS AND INTERVALS A69-23505

## INCLINATION

PROPRIOCEPTIVE ORGAN SYSTEMS IN NECK AND TRUNK INVOLVED IN VISUAL ORIENTATION CONSTANCY DURING BODY TILT AND CENTRIFUGATION A69-80869

MODIFIED RECEPTIVE FIELDS OF CELLS IN VISUAL CORTEX OF CATS OCCURRING SPONTANEOUSLY AND ASSOCIATED WITH BODY TILT A69-80873

## INDUSTRIAL SAFETY

CARE OF AIRCREWMEN UNDER COMPANY OCCUPATIONAL HEALTH PROGRAMS A69-80752

## INFECTIOUS DISEASES

EFFECTS OF HIGH AND LOW BAROMETRIC PRESSURES ON SUSCEPTIBILITY AND RESISTANCE TO INFECTION IN MICE NASA-CR-100360 N69-20009

ALTITUDE CHAMBER FOR INFECTIOUS DISEASE RESEARCH AD-680820 N69-20519

## INFORMATION

SELECTIVITY AND RELEVANCY OF DATA IN PROBLEM SOLVING A69-80797

## INFORMATION THEORY

STATISTICAL ANALYSIS AND FORM RECOGNITION PROBLEM AD-682066 N69-21836

## INFRARED RADIATION

LIMITS OF HUMAN TOLERANCE TO LOCALIZED SKIN EXPOSURE TO IR IRRADIATION OF VARIOUS INTENSITIES FROM PAIN THRESHOLD OBSERVATIONS, NOTING SKIN TEMPERATURE ROLE A69-23589

## INJURIES

HEAD INJURIES EVALUATION IN AIRCREW, NOTING MOTOR CYCLE ACCIDENTS A69-23378

INJURIES SUFFERED FROM OVEREXPOSURE IN LOW TEMPERATURE ENVIRONMENTS A69-80852

## INSPIRATION

ENERGY REQUIRED FOR CONDITIONING INSPIRED AIR IN UPPER RESPIRATORY TRACT A69-80816

## INSTRUMENT APPROACH

PERIPHERAL VISION CUES AND EFFECT ON PILOT PERFORMANCE DURING INSTRUMENT LANDING APPROACH AND RECOVERY FROM UNUSUAL ATTITUDES AM-68-12 N69-20298

## INSTRUMENT FLIGHT RULES

INTEGRATED VFR-IFR CURRICULUM FOR TEACHING PRIVATE PILOT FLIGHT SKILLS AND FULL INSTRUMENT FLIGHT SKILLS FAA-DS-68-24 N69-20033

PILOT RESPONSE TO PERIPHERAL VISION CUES DURING INSTRUMENT FLYING TASKS FAA-AM-68-11 N69-21164

## INSTRUMENT LANDING SYSTEMS

MANUAL CONTROL DISPLAYS FOR INSTRUMENT LANDING APPROACH OF LARGE SUBSONIC JET TRANSPORT, EVALUATING CLOSED LOOP SYSTEM PERFORMANCE AND SCANNING WORKLOAD A69-23877

## INSTRUMENT PACKAGES

SIMULATED MANUAL PACKAGE TRANSFER IN WEIGHTLESS ENVIRONMENT OF SATURN ORBITAL SPACE STATION NASA-TN-D-5111 N69-21501

## INTESTINES

INTESTINAL ABSORPTION OF OLEIC ACID AND TRIOLEIN INFLUENCED BY MICROORGANISMS IN RATS A69-80841

MECHANISM OF INHIBITION OF SHIGELLA FLEXNERI BY

## SUBJECT INDEX

COLIFORM BACTERIA IN NORMAL HUMAN INTESTINE A69-80939

NITROGEN COMPOUNDS EXCRETION FROM WHOLE-BODY GAMMA IRRADIATED RAT LARGE INTESTINE IN ABSENCE OF STRESS NIJS-R-544 N69-21146

## INTRAOCULAR PRESSURE

EFFECT OF INCREASED PRESSURE ON INTRA-OCULAR PRESSURE AND AQUEOUS DYNAMICS A69-80916

## ION CONCENTRATION

IONIC AND P H TRANSITIONS TRIGGERING CHLOROPLAST POST-ILLUMINATION LUMINESCENCE A69-80923

## ION MOTION

EARLY DISTURBANCES IN ACTIVE MIGRATION OF POTASSIUM 42 IONS IN IRRADIATED ERYTHROCYTES IN RATS, SHOWING RELATION BETWEEN INFLUX AND ENERGY EXCHANGE IN CELLS A69-23966

## IONIZING RADIATION

CHEMICAL AND BIOLOGICAL MEANS OF SAFEGUARDING BODY OF ASTRONAUT AGAINST IONIZING RADIATION AND VIBRATION A69-23297

PROTECTION AGAINST IONIZING RADIATION AT CELLULAR LEVEL, ASSESSED BY VARIOUS PARAMETERS A69-80819

PROTECTION AGAINST IONIZING RADIATION - PROBLEMATICS A69-80828

EFFECTS OF PULSED IONIZING RADIATION ON MONKEYS IN EQUILIBRIUM PLATFORM TASK AD-680748 N69-20361

## IRON ISOTOPES

SIMULTANEDOUS MEASUREMENT OF BLOOD PARAMETERS USING RADIOCHROMIUM LABELED RED CELLS AND RADIOIRON LABELED PLASMA AD-682287 N69-21904

## IRRADIATION

VISUAL ACUITY TESTS ON NORMAL AND FOCAL-HEAD IRRADIATED MONKEYS AD-681070 N69-20593

DAILY FREEZING, THAWING CYCLES, AND ULTRAVIOLET IRRADIATION EFFECTS ON BACTERIA SURVIVAL NASA-CR-100503 N69-21349

DOSE RATE EFFECTS ON MICE EXPOSED TO COBALT 60 GAMMA IRRADIATION AD-682288 N69-21609

## ISOLATION

E EG, HEART BEAT, RESPIRATION RATES, BODY TEMPERATURE, MOTOR ACTIVITY, PHYSICAL AND MENTAL EFFICIENCY OF MAN DURING ANECHOIC CHAMBER CONFINEMENT A69-23510

PERCEPTUAL SERIAL-POSITION CURVES WITH FREQUENTLY ISOLATED ELEMENT A69-80787

## ISOLATORS

DESIGN AND EVALUATION OF VACUUM CLEANING SYSTEM FOR ISOLATION CHAMBERS A69-80936

## ISOTOPIIC LABELING

TRYPTIC DIGESTION OF C TERMINAL TRITIATED PEPTIDES ANALYZED WITH SCENEDESMUS FERRODOXIN, NOTING USE FOR PROTEIN STRUCTURAL STUDY A69-24190

SIMULTANEDOUS MEASUREMENT OF BLOOD PARAMETERS USING RADIOCHROMIUM LABELED RED CELLS AND RADIOIRON LABELED PLASMA AD-682287 N69-21904

## J

## JET MIXING FLOW

HORIZONTAL JET DILUTION STUDIES OF WASTE DISPOSAL BY USE OF RADIOACTIVE ISOTOPES PB-180787 N69-21896

## JET NOZZLES

HORIZONTAL JET DILUTION STUDIES OF WASTE DISPOSAL  
BY USE OF RADIOACTIVE ISOTOPES  
PB-180787 N69-21896

## JOINTS (ANATOMY)

EVOKED POTENTIALS OF CORTEX INDUCED BY JOINT  
MOVEMENT - COMPARISON TO THOSE OF ELECTRICAL  
STIMULATION AND TOUCH AND RELATION TO NORMAL  
ELECTROENCEPHALOGRAM A69-80941

## JUDGMENTS

EFFECTS OF DURATION OF SERIES AND ANCHOR-STIMULI  
ON JUDGMENTS OF PERCEIVED SIZE A69-80785

SPATIAL MODELS AND MULTIDIMENSIONAL SCALING OF  
RANDOM SHAPES IN SUBJECTS OF DIFFERENT AGES  
A69-80798

JUDGMENTS OF MINIMAL AVERSION-THRESHOLDS FOR  
BRIGHTNESS AFTER LIGHT- OR DARK-ADAPTATION  
A69-80799

## K

## KEROSENE

MICROORGANISM GROWTH WITH PETROLEUM FUELS  
AD-680804 N69-20205

## KIDNEYS

RAPID GLOBAL TRANSPORTATION EFFECT ON CIRCADIAN  
RHYTHMIC PATTERNS IN HUMAN BODY FUNCTIONS,  
DISCUSSING KIDNEY EXCRETION AND PITUITARY ADRENAL  
CORTICAL SYSTEM A69-22545

LIVER AND KIDNEY METABOLISM IN OBESE PATIENTS  
DURING PROLONGED STARVATION A69-80908

## KINESTHESIA

ROLE OF VISUAL AND KINESTHETIC CUES IN LEARNING  
NOVEL SKILL IN HUMANS A69-80904

## L

## LACTATES

VENOUS BLOOD FLOW IN ILIAC AND RELATION TO  
PHYSICAL EXERCISE AND LACTATE PRODUCTION IN  
MAN A69-80884

## LACTIC ACID

GLYCOLYSIS RATE AND LACTIC ACID CONTENT IN RATS  
MYOCARDIUM DURING ADAPTATION TO HYPOXIA, USING  
PRESSURE CHAMBER A69-23501

## LANDING SIMULATION

PERIPHERAL VISION CUES AND EFFECT ON PILOT  
PERFORMANCE DURING INSTRUMENT LANDING APPROACH  
AND RECOVERY FROM UNUSUAL ATTITUDES  
AM-68-12 N69-20298

## LANGUAGES

PHONETICS OF AFRICAN DIALECT N69-20001

## LARYNX

PHYSIOLOGICAL PARAMETERS FOR PROSODY  
AD-682242 N69-21795

## LASERS

PATHOLOGY OF MONKEY RETINAL LESIONS FOLLOWING  
IRRADIATION WITH ARGON CONTINUOUS WAVE LASER  
A69-80758

REVIEW AND EVALUATION OF INVESTIGATION OF  
LASER-INDUCED ACOUSTIC BREAKAGE OF TOBACCO  
MOSAIC VIRUS A69-80826

LASER ENERGY RADIATION EFFECTS ON TISSUE CULTURE  
CELLS  
AD-680946 N69-20260

CLINICAL AND ELECTROPHORETIC ANALYSIS OF LASER  
INDUCED CATARACTS IN IRRADIATED RABBITS EYE  
LENSES  
AD-681899 N69-21533

## LAUNCH VEHICLES

LAUNCH-MAN SEQUENCING FOR EXTENDED MISSION  
EFFECTIVENESS STUDY  
NASA-CR-100321 N69-19608

## LEAD POISONING

EXAMINATION OF SUBJECTS WORKING IN MILITARY  
GASOLINE STATION AND EXPOSED TO TETRAETHYL  
LEAD A69-80868

## LEARNING

PERCEPTUAL SERIAL-POSITION CURVES WITH FREQUENTLY  
ISOLATED ELEMENT A69-80787

ROLE OF VISUAL AND KINESTHETIC CUES IN LEARNING  
NOVEL SKILL IN HUMANS A69-80904

KNOWLEDGE OF RESULTS IN TRAINING FOR VIGILANCE  
TASKS A69-80930

## LEARNING MACHINES

DYNAMIC MANIPULATION OF HEURISTICS AS PRODUCTION  
RULES FOR COMPUTER PROGRAMS, AND PROBLEM SOLVING  
MACHINE LEARNING  
AD-681027 N69-20483

OUTPUT ESTIMATES FOR AUTOMATA AND OPTIMIZATION OF  
LEARNING MACHINES WITH UNEQUAL INPUTS  
JPRS-47617 N69-21232

PROBLEM OF TEACHING MACHINES TO IDENTIFY EXTERNAL  
SITUATIONS USING POTENTIAL AND PROBABILITY  
THEORIES  
AD-681674 N69-21711

## LEAVES

INDUCTION OF DORSIVENTRALLY IN BROOD BODY  
SEEDINGS OF MARCHANTIA AND REVERSIBILITY OF  
DORSIVENTRAL INDUCTION BY EXTRINSIC FACTORS  
NASA-TT-F-12039 N69-21255

WATER ELECTROLYSIS DURING PHOTOSYNTHESIS IN LIVE  
LEAVES N69-21664

## LENGTH

EFFECT OF LEADING CONTOUR ON RELATIVE LENGTHS OF  
MOVING LIGHT AND DARK ARCS A69-80767

## LESIONS

PATHOLOGY OF MONKEY RETINAL LESIONS FOLLOWING  
IRRADIATION WITH ARGON CONTINUOUS WAVE LASER  
A69-80758

## LETHARGY

IMPEDANCE MEASUREMENTS AT VARIOUS DEPTHS OF RAT  
CEREBRAL CORTEX DURING DEPRESSION  
AD-682239 N69-21819

## LEVEL (HORIZONTAL)

COMPARISON OF EFFECTS OF STIMULATION BY  
CENTRIPETAL FORCE ON PERCEPTION OF VISUAL  
HORIZONTAL IN PARTIALLY SIGHTED AND NORMAL  
HUMANS A69-80786

## LIFE SCIENCES

EXPERIMENTAL RESEARCH CONCERNED WITH ORIGIN OF  
LIFE, STUDYING SYNTHESIS OF PRECURSOR POLYMERS AND  
SELF ASSEMBLY INTO PROTOCELLS A69-23035

## LIFE SUPPORT SYSTEMS

LIFE SUPPORT SYSTEMS FOR FOR APPLICATION TO MANNED  
SPACE FLIGHT N69-19844

ENGINEERING DESIGN STUDY OF SPACE SUIT WITH  
INTEGRATED ENVIRONMENTAL CONTROL SYSTEM  
AD-680826 N69-20386

NITROGEN CONTENT IN SPACECRAFT CABIN ATMOSPHERES  
N69-21663

## LIGHT (VISIBLE RADIATION)

BRIGHTNESS DETERMINATION IN DARK-ADAPTED HUMANS  
VIEWING WHITE LIGHT BINOCULARLY A69-80791

DYNAMICS OF ELECTRORETINOGRAM BETA WAVE IN CATS  
DURING RHYTHMIC PHOTIC STIMULATION A69-80812

LIGHT-INDUCED CHANGES IN FLUORESCENCE YIELD OF  
CHLOROPHYLL A IN VIVO - DIP AND PEAK IN  
FLUORESCENCE TRANSIENT OF CHLORELLA PYRENOIDOSA  
A69-80911

## LINEAR EQUATIONS

LIGHT-INDUCED CHANGES IN FLUORESCENCE OF  
CHLOROPHYLL A IN VIVO - EFFECT OF  
PREILLUMINATION ON FLUORESCENCE TRANSIENT OF  
CHLORELLA PYRENOIDOSA A69-80912

EFFECT OF LOW LEVEL RED OR WHITE LIGHT ON  
DARK ADAPTATION IN HUMANS A69-80932

## LINEAR EQUATIONS

THEORY OF BODY TISSUE GAS SATURATION AND  
DESATURATION IN LINEAR EQUATIONS DEVELOPED IN  
TERMS OF ELECTRICAL ANALOGS  
DRET-620 N69-21406

## LINES (GEOMETRY)

EFFECT OF BACKGROUND PATTERN OF LINES ON  
ZOLLNER ILLUSION A69-80949

## LIPID METABOLISM

HYPOTHERMIA INDUCED ALTERATIONS IN BIOCHEMICAL  
PROCESSES STUDIED WITH ISOLATED RAT LIVER  
PERFUSED AT LOW TEMPERATURE A69-23119

EFFECT OF CHOLINE ON PHOSPHOLIPID METABOLISM IN  
LIVER BRAIN AND MUSCLES ON GUINEA PIGS AT LAST  
STAGE OF RADIATION SICKNESS A69-80755

INTESTINAL ABSORPTION OF OLEIC ACID AND  
TRIOLEIN INFLUENCED BY MICROORGANISMS IN RATS  
A69-80841

## LIPOPROTEINS

VARIATIONS IN BLOOD SERUM LIPIDS IN MAN IN  
RELATION TO MENTAL STRESS AND REGULAR PRACTICE  
OF PHYSICAL ACTIVITIES A69-80864

## LIQUID SODIUM

PERFORMANCE AND CAVITATION DAMAGE TO AXIAL FLOW  
PUMP ROTOR BLADES IN HIGH TEMPERATURE LIQUID  
SODIUM  
NASA-TN-D-5138 N69-21773

## LIVER

MEDICAL EXAMINATIONS OF MISSILE FUEL HANDLERS,  
NOTING SOME ABNORMAL RESULTS IN LIVER FUNCTION  
TESTS AND POSSIBLE HYDRAZINE TOXICITY A69-22556

MICROVILLAR BLEB FORMATION IN PROTON IRRADIATED  
PRIMATE HEPATOCYTES WITH ELECTRON MICROSCOPE,  
NOTING SINUSOIDAL LUMEN A69-23045

HYPOTHERMIA INDUCED ALTERATIONS IN BIOCHEMICAL  
PROCESSES STUDIED WITH ISOLATED RAT LIVER  
PERFUSED AT LOW TEMPERATURE A69-23119

LIVER AND KIDNEY METABOLISM IN OBESE PATIENTS  
DURING PROLONGED STARVATION A69-80908

## LOCOMOTION

JET SHOES FOR SPACE LOCOMOTION  
NASA-CASE-XLA-08491 N69-21380

## LONG TERM EFFECTS

BARBAMYL EFFECT WITH AND WITHOUT SOMATOTROPIC  
HORMONE INJECTION IN MICE DURING PROLONGED  
ISOLATION AND HYPOKINESIA, NOTING SLEEP DURATION  
A69-23576

## LOW TEMPERATURE ENVIRONMENTS

HUMAN BODY TEMPERATURE REGULATING FACTORS IN LOW  
TEMPERATURE ENVIRONMENT, STUDYING METABOLISM,  
LUNG VENTILATION AND ONSET OF SHUDDERING  
A69-23298

COLD ACCLIMATIZATION IN MEN AND ANIMALS UNDER  
ARCTIC LIVING CONDITIONS A69-80851

INJURIES SUFFERED FROM OVEREXPOSURE IN LOW  
TEMPERATURE ENVIRONMENTS A69-80852

CORRELATION BETWEEN BODY TEMPERATURE AND OXYGEN  
CONSUMPTION VARIATIONS IN NORMAL AND FURLESS  
RABBITS IN INITIAL PERIODS OF ADAPTATION TO  
MODERATELY LOW TEMPERATURE ENVIRONMENT  
A69-80859

SHORT AND EXTENDED COLD EXPOSURE EFFECTS ON  
SKELETAL METABOLISM IN RATS A69-80874

## SUBJECT INDEX

## LUMINAIRES

VISUAL SEARCH AND DETECTION UNDER SIMULATED FLARE  
LIGHT  
AD-681129 N69-20509

## LUMINANCE

SPATIAL AND LUMINANCE FACTORS DETERMINING  
VISUAL EXCITABILITY IN HUMANS A69-80765

LUMINANCE REQUIREMENTS FOR HUE IDENTIFICATION  
IN SMALL TARGETS A69-80823

REVIEW OF THEORETICAL AND EXPERIMENTAL RESEARCH  
ON REVERSAL OF SIMULTANEOUS LIGHTNESS-CONTRAST  
A69-80848

## LUMINOUS INTENSITY

DARK ADAPTATION MECHANISMS STUDIED FROM LIGHT  
INTENSITY RECOVERY AFTER EXPERIMENTAL FLASH, USING  
ELECTRORETINOGRAPHY METHODS A69-23588

CHROMATICITY AND LUMINANCE EFFECTS ON VISUAL  
DETECTION OF COLORS  
AD-680938 N69-20384

## LUNGS

CONTINUOUS POSITIVE-PRESSURE BREATHING IN ACUTE  
HEMORRHAGIC EDEMA IN DOGS A69-80774

## M

## MACHINE ORIENTED LANGUAGES

LITERATURE SURVEY CONCERNING COMPUTER-ASSISTED  
INSTRUCTION APPLICATIONS, SYSTEMS, PROGRAMMING  
LANGUAGES, THEORIES, AND ADMINISTRATION  
AD-681079 N69-21031

## MAGNESIUM

VEGETABLE DIET INCLUDING 210 G OF DRY CHLORELLA  
BIOMASS DECREASES EFFECT ON CALCIUM AND MAGNESIUM  
ASSIMILATION TO PRODUCE INSIGNIFICANT NEGATIVE  
BALANCE OF K AND MN A69-23590

EFFECT OF CHICKEN AND HOG CALCITONIN ON SOME  
PARAMETERS OF CALCIUM, PHOSPHORUS, AND  
MAGNESIUM METABOLISM IN DOGS A69-80910

## MAGNETIC FIELDS

BIOLOGICAL EFFECTS OF MAGNETIC FIELDS  
N69-19845

## MALES

SPACE FLIGHT HYPOKINESIA SIMULATION EXPERIMENTS TO  
STUDY OXYGEN BALANCE IN MAN A69-23507

## MAMMALS

ENDOGENOUS RESPIRATION AND UREA PRODUCTION OF  
LIVER TISSUE FROM HIBERNATING AND  
NON-HIBERNATING HEDGEHOGS AND FROM FROGS  
ACCLIMATED TO DIFFERENT AMBIENT TEMPERATURES  
A69-80764

## MAN MACHINE SYSTEMS

HUMAN ENGINEERING PROGRAM AT EARLY DESIGN PHASE OF  
SST AIRCRAFT TO ACHIEVE MAXIMUM HUMAN EFFICIENCY  
AND MAN MACHINE COMPATIBILITY A69-22546

ROLL-MOTION CUES FOR MAN-VEHICLE CONTROL IN  
COMPENSATORY TRACKING TASK WITH DISTURBANCE INPUT  
A69-23879

ENGINEERING PROBLEMS SURVEY ON TELEOPERATOR  
CONTROL SYSTEMS  
NASA-SP-5070 N69-21478

## MANGABEYS

LASER-INDUCED CHANGES IN ELECTRORETINOGRAPHY OF  
MANGABEY  
AD-680913 N69-20360

## MANNED SPACE FLIGHT

SYSTEM ANALYSIS OF REGENERATIVE CABIN ATMOSPHERE  
CONTROL SYSTEM  
NASA-TM-X-61517 N69-19642

LIFE SUPPORT SYSTEMS FOR FOR APPLICATION TO MANNED  
SPACE FLIGHT N69-19844

BIOTELEMETRY SYSTEM FOR ONBOARD MEDICAL

## SUBJECT INDEX

## METABOLISM

- INFORMATION PROCESSING DURING MANNED SPACE FLIGHT  
JPRS-47607 N69-20912
- ABSORBED RADIATION DOSES OF ASTRONAUTS DURING SPACE FLIGHT  
NASA-TT-F-12162 N69-20924
- MANNED SPACECRAFT  
STORAGE-DISPENSER DEVICE FOR FOOD CUBES ABOARD SPACE VEHICLE  
AD-680840 N69-20546
- MANUAL CONTROL  
CONTROL OPERATION TIME FOUND DEPENDENT ON GLOVES, PHYSICAL CHARACTERISTICS OF CONTROL AND TYPE OF REQUIRED OPERATION A69-23180
- GLOVE CHARACTERISTICS EFFECTS ON MANIPULABILITY, FINDING OPERATION TIME DIFFERENCES BETWEEN GLOVED AND BAREHANDED OPERATION DEPENDENT ON TYPE OF REQUIRED CONTROL OPERATION A69-23181
- MANUAL CONTROL DISPLAYS FOR INSTRUMENT LANDING APPROACH OF LARGE SUBSONIC JET TRANSPORT, EVALUATING CLOSED LOOP SYSTEM PERFORMANCE AND SCANNING WORKLOAD A69-23877
- ROLL-MOTION CUES FOR MAN-VEHICLE CONTROL IN COMPENSATORY TRACKING TASK WITH DISTURBANCE INPUT A69-23879
- MARINE BIOLOGY  
SUMMARIZED SURVEYS OF PAPERS PRESENTED AT SECOND INTERNATIONAL DIVING- MEDICAL SYMPOSIUM, KIEL, GERMANY  
MBL-1968-10 N69-21309
- MASKING  
REVIEW OF METHODS, FINDINGS, AND THEORIES IN STUDIES OF VISUAL MASKING A69-80845
- MATHEMATICAL LOGIC  
AXIOMATIC EXPLANATION OF COMPLETE SELF REPRODUCTION, NOTING LOGICAL MATHEMATICAL BIOLOGICAL REASONING AND EVOLUTION THEORIES A69-23385
- MATHEMATICAL MODELS  
MATHEMATICAL, PHYSICAL AND PHYSIOLOGICAL MODELING FOR ANALYSIS OF FUNCTIONAL CHANGES DURING VARYING GRAVITY CONDITIONS A69-22541
- MATHEMATICAL MODEL OF CLOSED BIOLOGICAL CYCLE REGENERATING PART OF LIFE SUPPORT PRODUCTS, INCORPORATING ASTRONAUT, STORAGE AND REGENERATING WASTE DISPOSAL UNITS A69-23580
- HUMAN PILOT ADAPTATION IN SIMULATED MULTILOOP VTOL HOVERING TASK WITH SERIES LOOP CLOSURE MODEL A69-23878
- PROGRAMMED SEARCH AND GRADIENT SEARCH METHODS FOR DETERMINATION OF SAMPLING INTERVALS IN SYNTHESIS OF SAMPLED DATA MODELS OF HUMAN OPERATORS A69-23881
- PROBABILITY MODEL FOR FLIGHT CREW DEPLOYMENT  
AD-680763 N69-20134
- MATHEMATICAL MODEL OF TRANSFORMATIONAL GRAMMARS  
AD-680784 N69-20512
- PREREQUISITES FOR CHEMICAL THERMODYNAMIC MODELS OF LIVING SYSTEMS  
AD-680760 N69-20585
- MATHEMATICAL THEORY OF BLOOD CLOTTING  
AD-681517 N69-21636
- PATTERN AND SPEECH RECOGNITION PROBLEMS USING MATHEMATICAL MODELS  
AD-681809 N69-21749
- MEASURING INSTRUMENTS  
VENTILATION-PERFUSION RELATIONSHIPS IN OBESE HUMANS OF BOTH SEXES A69-80773
- CARDIAC OUTPUT DETERMINATION FROM PRECORDIAL
- ISOTOPE-DILUTION CURVES DURING EXERCISE A69-80777
- CONTINUOUS MEASUREMENTS OF ARTERIAL FLOW IN HUMANS WITH AND WITHOUT HEART DISEASE DURING ATRIAL AND VENTRICULAR ARRHYTHMIAS A69-80803
- BLOOD OXYGEN MEASUREMENT BY OXYGEN TENSION MEASURED AFTER CARBON MONOXIDE RELEASE A69-80889
- MEASUREMENT OF TRACKING PROFICIENCY A69-80919
- MECHANICAL PROPERTIES  
MODIFICATION OF SKIN MECHANICAL PROPERTIES BY SWEAT GLAND ACTIVITY OF ANESTHETIZED CATS CONTROLLED BY ELECTRICAL STIMULATION OF MEDIAL PLANTAR NERVE A69-80772
- MEDICAL SCIENCE  
SCIENTIFIC RESEARCH IN MEDICINE, COMPUTERS, ETC. IN EASTERN EUROPE  
JPRS-47526 N69-20319
- BIOMEDICAL APPLICATIONS TEAM FOR TRANSFERRING AEROSPACE GENERATED TECHNOLOGY TO NONAEROSPACE BIOMEDICAL FIELD  
NASA-CR-100499 N69-21682
- MEMBRANE STRUCTURES  
ACCELERATION EFFECTS ON CELLULAR AND SUBCELLULAR STRUCTURES ENZYME ACTIVITY IN HUMANS AND ANIMALS, NOTING CHANGES RESULTING FROM CHANGED PERMEABILITY OF MEMBRANES A69-23496
- MENTAL PERFORMANCE  
EFFECTS OF D-AMPHETAMINE ON MENTAL-TASK-ALTERNATION AND UTILITY OF DELAYED REWARD A69-80790
- TIME ESTIMATION AS AFFECTED BY DISTRACTION TASK OF PERFORMING ARITHMETICAL OPERATIONS OF VARYING COMPLEXITY A69-80805
- INFLUENCE OF EVENING ACTIVITY INCLUDING PHYSICAL EXERCISE, MENTAL TASKS AND RELAXATION ON ONSET OF SLEEP A69-80836
- RELATIONSHIP BETWEEN EFFICIENCY DURING MENTAL TASKS AND CIRCADIAN RHYTHM OF BODY TEMPERATURE AFFECTED BY CHANGE IN WORK-REST CYCLE A69-80929
- METABOLIC WASTES  
DISCHARGE RATES OF METABOLIC PRODUCTS IN MEN CONFINED IN PRESSURE CHAMBER WEARING AIRTIGHT SUITS AND GAS MASKS A69-23508
- METABOLISM  
DEPRESSED METABOLISM - CONFERENCE, WASHINGTON, AUGUST 1968 A69-23116
- HIGH TEMPERATURE ACCLIMATION, CLIMATES WITH HEAT DISSIPATION PROBLEMS AND HIBERNATION OR TORPOR EFFECTS ON METABOLIC DEPRESSION IN HOMEOTHERMS A69-23121
- ELECTROCARDIOGRAMS OF HOMEOTHERMIC ANIMAL, HIBERNATOR, WARM AND COOL CLIMATE POIKILOHERMIC ANIMALS COMPARED FOR HYPOTHERMIA, CONSIDERING METABOLIC CHANGES CONTRIBUTING TO EKG CHANGES A69-23123
- PHYSIOLOGIC AND METABOLIC EFFECTS IN HUMANS UNDERGOING THERAPEUTIC HYPOTHERMIA A69-23125
- RADIATION RESISTANCE OF ANIMALS IN HIBERNATION AND HYPOTHERMIA, NOTING TEMPERATURE DEPENDENCE OF PROTECTIVE EFFECT A69-23126
- HYPOKINESIA EFFECT ON DYNAMICS OF METABOLIC PROCESSES IN ATHLETES MUSCULAR SYSTEM BY COMPARISON OF DIURESIS, CREATININE EXCRETION AND CUTANEOUS FAT LAYER INDICES A69-23582
- EFFECT OF GLUTAMIC ACID ON RATE OF BASAL

METHOD OF CHARACTERISTICS

SUBJECT INDEX

METABOLISM AND OXIDATIVE PHOSPHORYLATION  
IN LIVER MITOCHONDRIA OF HYPOXIC AND  
THYROIDECTOMIZED RATS A69-80754

CONTINUOUS AUTOMATED SAMPLING TECHNIQUE FOR  
DETERMINING METABOLIC STATE OF LEFT VENTRICLE  
A69-80781

ALTERNATING DIETS OF HIGHER AND LOWER ENERGIES  
OR PROTEIN IN RATS ON METABOLIC ASPECTS  
A69-80842

EFFECT OF INCREASING AMINO ACID INTAKE ON  
NITROGEN RETENTION IN ADULT MEN  
A69-80843

LIVER AND KIDNEY METABOLISM IN OBESE PATIENTS  
DURING PROLONGED STARVATION A69-80908

AMINO ACID METABOLISM DURING PROLONGED  
STARVATION IN OBESE PATIENTS A69-80909

SPORULATION, HEAT RESISTANCE AND METABOLIC  
PROPERTIES OF CLOSTRIDIUM PERFRINGENS

## SUBJECT INDEX

## PHYSIOLOGICAL RESPONSES

- EXAMINATION OF SUBJECTS WORKING IN MILITARY GASOLINE STATION AND EXPOSED TO TETRAETHYL LEAD A69-80868
- PHYSICAL EXERCISE  
LONG TERM HYPOKINESIA EFFECT ON CARDIOVASCULAR SYSTEM OF ATHLETES INDICATING HUMAN ORTHOSTATIC RESISTANCE INCREASE DUE TO PHYSICAL EXERCISES A69-23581
- CIRCULATION AND RESPIRATION DURING PHYSICAL WORK WHILE USING PROTECTIVE OXYGEN MASK A69-80753
- HUMAN METABOLIC RESPONSES TO HYPERTHERMIA DURING MILD TO MAXIMAL EXERCISE A69-80770
- HEAT TOLERANCE OF EXERCISING OBESE AND LEAN WOMEN WHILE EXPOSED TO SIX DIFFERENT ENVIRONMENTAL TEMPERATURES A69-80771
- CARDIAC OUTPUT DETERMINATION FROM PRECORDIAL ISOTOPE-DILUTION CURVES DURING EXERCISE A69-80777
- DESCRIPTION OF ERGOMETER FOR EXERCISING HUMANS DURING CALDRIMETRIC STUDIES IN CLIMATIC CHAMBER A69-80783
- ADAPTATION OF CARDIOVASCULAR SYSTEM TO HOT DRY ENVIRONMENTS IN TRAINED AND UNTRAINED YOUNG SUBJECTS DURING MODERATE EXERCISE A69-80813
- CORRELATION BETWEEN VARIATIONS OF BLOOD AND PSEUDACHOLINESTERASE IN SKIERS AND PHYSICAL WORKLOAD PERFORMED A69-80814
- INFLUENCE OF EVENING ACTIVITY INCLUDING PHYSICAL EXERCISE, MENTAL TASKS AND RELAXATION ON ONSET OF SLEEP A69-80836
- ELABORATION OF PHYSIOLOGICAL PARAMETER COMPLEX TO DIAGNOSE FATIGUE DURING STATIC MUSCULAR ACTIVITY IN MAN A69-80856
- VARIATIONS IN FUNCTIONAL STATE OF ARTERIES IN DIFFERENT PARTS OF HUMAN BODY DURING PHYSICAL EXERCISE AT SEA LEVEL AND AT HIGH ALTITUDES A69-80858
- INCREASE OF HUMAN TOLERANCE TO HIGH TEMPERATURE ENVIRONMENTS WITH PHYSICAL TRAINING AND ADAPTATION TO HYPOXIA AT SIMULATED ALTITUDE A69-80860
- EFFECT OF STATIC AND DYNAMIC PHYSICAL EXERCISES ON AMINO ACID CONCENTRATIONS IN DOG URINE A69-80861
- VARIATIONS IN BLOOD SERUM LIPIDS IN MAN IN RELATION TO MENTAL STRESS AND REGULAR PRACTICE OF PHYSICAL ACTIVITIES A69-80864
- USE OF CRAMPTON TEST TO EVALUATE EFFECT OF PHYSICAL TRAINING ON CARDIOVASCULAR CAPACITY IN ARMY RECRUITS A69-80867
- RELATIONSHIP OF SIX WEEKS OF STRENUOUS PHYSICAL EXERCISE IN COOL ENVIRONMENT TO TOLERANCE OF STANDARD WORK-HEAT STRESS A69-80875
- CHOLINERGIC DIFFERENCES AND HEART RATE IN TRAINED AND NONTRAINED HYPOPHYSECTOMIZED RATS A69-80880
- PHYSIOLOGICAL RESPONSES IN MEN DURING PHYSICAL EXERCISE IN SHORTS. IN FOOTBALL UNIFORM AND WITH BACKPACK A69-80883
- VENOUS BLOOD FLOW IN ILIAC AND RELATION TO PHYSICAL EXERCISE AND LACTATE PRODUCTION IN MAN A69-80884
- EFFECT OF ALTITUDE ACCLIMATIZATION ON WORK CAPACITY IN RATS A69-80894
- REDUCTION OF ENDURANCE CAPACITY DURING PHYSICAL EXERCISE AT VARIOUS ALTITUDES A69-80901
- CHANGES IN BLOOD PRESSURE OF TRAINED AND UNTRAINED SUBJECTS DURING EXERCISE AT VARIOUS ALTITUDES A69-80902
- VENTILATORY MECHANICS AND EXPIRATORY FLOW LIMITATION DURING EXERCISE IN NORMAL SUBJECTS A69-80907
- CARDIAC RATE IN RELATION TO AEROBIC CAPACITY FOR WORK IN OLYMPIC ATHLETES AND NORMAL HUMANS A69-80928
- PHYSICAL FITNESS  
TILT-TABLE AND ACCELERATION TOLERANCE OF ATHLETES AND INACTIVE STUDENTS, COMPARING CARDIOVASCULAR RESPONSES, HEART RATE AND BLACKOUT LEVEL DVL-834 A69-21304
- USE OF CRAMPTON TEST TO EVALUATE EFFECT OF PHYSICAL TRAINING ON CARDIOVASCULAR CAPACITY IN ARMY RECRUITS A69-80867
- USE OF PHONOCARDIOGRAPHY FOR DETECTION OF ABNORMAL SYSTOLIC MURMURS IN AEROMEDICAL EVALUATION OF FLYING PERSONNEL A69-80895
- PHYSIOLOGICAL EFFECTS  
PHYSIOLOGICAL EFFECTS OF BREATHING COOL DEHUMIDIFIED AIR IN HOT HUMID ENVIRONMENT, TABULATING TOLERANCE TIME, HEART RATE, TEMPERATURE CHANGES AND SWEAT LOSS A69-22543
- INCREASED CHRONIC ACCELERATION PHYSIOLOGICAL EFFECTS ON CHICKENS, COMPARING HEMATOLOGICAL OBSERVATIONS WITH EXERCISE CAPACITY, SURVIVAL AND SEXUAL DEVELOPMENT A69-23041
- PHYSIOLOGIC AND METABOLIC EFFECTS IN HUMANS UNDERGOING THERAPEUTIC HYPOTHERMIA A69-23125
- OCULAR INJURIES DURING BAILOUT FROM VAMPIRE AIRCRAFT, NOTING HEMORRHAGES A69-23380
- HYPOKINESIA EFFECTS ON HUMAN NEUROLOGY ON EXTENDED SPACE FLIGHTS SIMULATED BY 72-DAY BED REST A69-23506
- AUTOMATIC COMPUTER PROCESSING OF PHYSIOLOGICAL DATA DURING SPACE FLIGHTS, DISCUSSING CHOICE OF COMPUTERS AND COMPUTER PROGRAMS A69-23509
- PROLONGED BED REST EFFECT ON HUMAN MYOGENIC TONUS AND PROPRIOCEPTIVE REFLEXES, COMPARING TEST SUBJECTS WITH AND WITHOUT PHYSICAL EXERCISES A69-23583
- COMBINED EFFECT OF PROLONGED BED REST AND ACCELERATION EXPOSURE ON HUMAN BLOOD CIRCULATION, NOTING INCREASED HEART RATE AND ARTERIAL BLOOD PRESSURE A69-23584

PHYSIOLOGICAL TESTS

SUBJECT INDEX

TO DETERMINE THERMOREGULATORY ABILITY A69-22548

RESPONSE RATES OF RATS TO PERIODIC SHOCKING FOR FOOD REINFORCEMENT WITH ADDED CLOCK CUE STIMULI A69-23304

HEAT AND HUMIDITY ENDURANCE LIMITS IN MAN A69-23494

E EG, HEART BEAT, RESPIRATION RATES, BODY TEMPERATURE, MOTOR ACTIVITY, PHYSICAL AND MENTAL EFFICIENCY OF MAN DURING ANECHOIC CHAMBER CONFINEMENT A69-23510

HAMSTERS RESPONSES TO HELIUM-OXYGEN AND NITROGEN-OXYGEN AT AMBIENT TEMPERATURES, COMPARING RESPIRATION RATES, WEIGHTS AND BODY TEMPERATURES A69-23564

VEGETABLE DIET INCLUDING 210 G OF DRY CHLORELLA BIOMASS DECREASES EFFECT ON CALCIUM AND MAGNESIUM ASSIMILATION TO PRODUCE INSIGNIFICANT NEGATIVE BALANCE OF K AND MN A69-23590

HUMAN PHYSIOLOGY FOR EXPOSURE TO ACUTE HYPOXIA STUDIED WITH VARIATION PULSOGRAMS AND INDICES OF EXTERNAL RESPIRATION AND PULMONARY GAS EXCHANGE A69-23592

E EG, EKG, RESPIRATORY MOTIONS AND PULMONARY VENTILATION RECORDINGS IN STUDY OF CARBON DIOXIDE ADDITIONS EFFECT ON HUMAN TOLERANCE TO HYPOXIC CONDITIONS A69-23898

PORTABLE, MULTIUNIT LOW-PRESSURE CHAMBER WITH LOCKS FACILITATING INTRODUCTION AND REMOVAL OF FOOD DISHES AND REPLENISHING DRINKING WATER DURING LONG-TERM ANIMAL EXPOSURE A69-80778

EFFECT OF ACUTE HYPOXIA AND HYPERCAPNIA ON ULTRASTRUCTURE OF CENTRAL NERVOUS SYSTEM OF CATS A69-80806

ADAPTATION OF CARDIOVASCULAR SYSTEM TO HOT DRY ENVIRONMENTS IN TRAINED AND UNTRAINED YOUNG SUBJECTS DURING MODERATE EXERCISE A69-80813

REVIEW OF CURRENT PROBLEMS IN HIGH ALTITUDE PHYSIOLOGY A69-80839

ELABORATION OF PHYSIOLOGICAL PARAMETER COMPLEX TO DIAGNOSE FATIGUE DURING STATIC MUSCULAR ACTIVITY IN MAN A69-80856

RENAL FUNCTIONAL DISTURBANCES IN MAN EXPOSED TO PROLONGED POISONING BY CHLOROORGANIC COMPOUNDS A69-80866

EXAMINATION OF SUBJECTS WORKING IN MILITARY GASOLINE STATION AND EXPOSED TO TETRAETHYL LEAD A69-80868

PHYSIOLOGICAL RESPONSES IN MEN DURING PHYSICAL EXERCISE IN SHORTS, IN FOOTBALL UNIFORM AND WITH BACKPACK A69-80883

STATUS OF RESEARCH IN BIOASTRONAUTICS IN 1967 - REVIEW A69-80890

EFFECT OF WEIGHTLESSNESS ON MACAQUE PHYSIOLOGICAL PARAMETERS AND PSYCHOMOTOR PERFORMANCE IN ROCKET FLIGHT A69-80893

EFFECT OF ALTITUDE ACCLIMATIZATION ON WORK CAPACITY IN RATS A69-80894

AUTOKINESIS AND PERCEPTION OF MOVEMENT - PHYSIOLOGY OF ECCENTRIC FIXATION A69-80943

AUDITORY SENSITIVITY OF RHESUS AND WHITE THROATED CAPUCHIN MONKEYS DETERMINED BY COMPARISON OF CONDITIONED SUPPRESSION, GALVANIC SKIN, AND EVOKED CORTICAL RESPONSES AD-681135 N69-20679

SERIAL ACCURACY OF SEQUENTIAL RESPONSES IN PSYCHOPHYSIOLOGICAL THRESHOLD MEASUREMENTS IZF-1968-21 N69-21474

DETERMINANTS OF TACTUAL PERCEPTION OF FINGER-DRAWN SYMBOLS - REAPPRAISAL AD-681666 N69-21689

PHYSIOLOGICAL TESTS

TILT-TABLE AND ACCELERATION TOLERANCE OF ATHLETES AND INACTIVE STUDENTS, COMPARING CARDIOVASCULAR RESPONSES, HEART RATE AND BLACKOUT LEVEL DVL-834 A69-21304

COMPUTER PROGRAM FOR ONBOARD MEDICAL CHECKUPS OF SPACECRAFT CREWS DURING EXTENDED SPACE FLIGHTS, DISCUSSING TESTS AND INTERVALS A69-23505

PIGEONS

MONOCULAR EYE MOVEMENTS OF RESTRAINED AND PARTIALLY RESTRAINED PIGEONS A69-80946

PILOT PERFORMANCE

AVIATION COMBAT PERFORMANCE CRITERION BY ANALYZING QUESTIONNAIRES SENT TO COMBAT DEPLOYED FLIGHT SURGEONS, NOTING POSSIBLE VALUE OF PEER RATING A69-22549

JET FIGHTER PILOT SPATIAL DISORIENTATION DURING FLIGHT AND ON GROUND, EMPHASIZING VESTIBULAR NEURONITIS DIAGNOSIS A69-23382

HUMAN PILOT ADAPTATION IN SIMULATED MULTILoop VTOL HOVERING TASK WITH SERIES LOOP CLOSURE MODEL A69-23878

PERIPHERAL VISION CUES AND EFFECT ON PILOT PERFORMANCE DURING INSTRUMENT LANDING APPROACH AND RECOVERY FROM UNUSUAL ATTITUDES AM-68-12 N69-20298

PILOT RESPONSE TO PERIPHERAL VISION CUES DURING INSTRUMENT FLYING TASKS FAA-AM-68-11 N69-21164

PILOT TRAINING

INTEGRATED VFR-IFR CURRICULUM FOR TEACHING PRIVATE PILOT FLIGHT SKILLS AND FULL INSTRUMENT FLIGHT SKILLS FAA-DS-68-24 N69-20033

PILOTS (PERSONNEL)

CARE OF AIRCREWMEN UNDER COMPANY OCCUPATIONAL HEALTH PROGRAMS A69-80752

CASE STUDY OF ACQUIRED EPILEPSY IN FIGHTER PILOT A69-80897

PITUITARY GLAND

CHOLINERGIC DIFFERENCES AND HEART RATE IN TRAINED AND NONTRAINED HYPOPHYSECTOMIZED RATS A69-80880

BRAIN 5-HYDROXYTRYPTAMINE AND ANTERIOR PITUITARY ACTIVATION BY STRESS IN RATS A69-80906

PITUITARY HORMONES

RAPID GLOBAL TRANSPORTATION EFFECT ON CIRCADIAN RHYTHMIC PATTERNS IN HUMAN BODY FUNCTIONS, DISCUSSING KIDNEY EXCRETION AND PITUITARY ADRENAL CORTICAL SYSTEM A69-22545

PLANTS (BOTANY)

CHANGE IN CONTENT OF DRY MATTER, SUGARS AND ASCORBIC ACID IN PLANTS AFTER ACTION OF SPACE FLIGHT FACTORS ON SEEDS OF THESE PLANTS A69-23495

TEMPERATURE EFFECT ON VOLATILE ACID CONTENT IN SEEDS AND LEAVES OF OIL-BEARING PLANTS NASA-TT-F-12125 N69-19646

ORIGIN OF NYCTITROPIC MOVEMENTS OF LEAF ORGANS NASA-TT-F-11949 N69-20318

NYCTITROPIC AND AUTONOMOUS CIRCADIAN MOVEMENTS IN PLANTS NASA-TT-F-11940 N69-21222

SUBJECT INDEX

PROTEIN METABOLISM

INDUCTION OF DORSIVENTRALLY IN BROOD BODY SEEDINGS OF MARCHANTIA AND REVERSIBILITY OF DORSIVENTRAL INDUCTION BY EXTRINSIC FACTORS NASA-TT-F-12039 N69-21255

STUDY OF INDUCTORS AND THEIR EFFECTS ON INDUCTION OF DORSIVENTRALITY IN GERMINATING BROOD BODIES OF MARCHANTIA AND LUNULARIA NASA-TT-F-12038 N69-21669

GRAVITY AS INDUCTOR OF DORSIVENTRALITY IN MARCHANTIA BROOD BODIES NASA-TT-F-12037 N69-21670

EFFECTS OF PROLONGED REDUCED PRESSURE ON GROWTH AND NITROGEN CONTENT OF TURNIP PLANTS AD-681499 N69-21901

**POLAROGRAPHY**  
POLAROGRAPHIC DETERMINATION OF TISSUE OXYGEN TENSION BY MEASURING FLUID IN IMPLANTED CAPSULE IN DOGS A69-80888

**POLYMER CHEMISTRY**  
EXPERIMENTAL RESEARCH CONCERNED WITH ORIGIN OF LIFE, STUDYING SYNTHESIS OF PRECURSOR POLYMERS AND SELF ASSEMBLY INTO PROTOCELLS A69-23035

POLY A-POLY U SYNTHESIZED BY AZOTOBACTER VINELANDI RNA POLYMERASE IN UNPRIMED REACTION CONTAINING ATP AND UTP, FOLLOWING SHORT LAG PERIOD A69-24185

**POPULATIONS**  
GRAPH THEORY APPLIED TO AQUATIC ORGANISM COMMUNITIES JPRS-47689 N69-21455

**PORTABLE EQUIPMENT**  
PORTABLE BATTERY OF TESTS TO ASSESS HUMAN MOBILITY IN FULL PRESSURE SUITS AD-680825 N69-20385

**POSITION (LOCATION)**  
TECHNIQUE FOR MAPPING INTRAMUSCULAR INNERVATION IN ADULT ALBINO RATS A69-80782

PERCEPTUAL SERIAL-POSITION CURVES WITH FREQUENTLY ISOLATED ELEMENT A69-80787

**POSTFLIGHT ANALYSIS**  
CORRELATION STUDY OF SIMULATION OF GEMINI EXTRAVEHICULAR ACTIVITY WITH FLIGHT RESULTS NASA-CR-1146 N69-19902

**POSTURE**  
EFFECT OF POSTURAL CHANGES ON TONUS IN MAIN ARTERIAL VASCULAR SYSTEM IN MAN A69-80857

PROPRIOCEPTIVE ORGAN SYSTEMS IN NECK AND TRUNK INVOLVED IN VISUAL ORIENTATION CONSTANCY DURING BODY TILT AND CENTRIFUGATION A69-80869

**POTASSIUM ISOTOPES**  
EARLY DISTURBANCES IN ACTIVE MIGRATION OF POTASSIUM 42 IONS IN IRRADIATED ERYTHROCYTES IN RATS, SHOWING RELATION BETWEEN INFLUX AND ENERGY EXCHANGE IN CELLS A69-23966

**POTENTIAL THEORY**  
PROBLEM OF TEACHING MACHINES TO IDENTIFY EXTERNAL SITUATIONS USING POTENTIAL AND PROBABILITY THEORIES AD-681674 N69-21711

**PREDICTIONS**  
ANOMALOUS PREDICTION OF MACHINE GENERATED RANDOM NUMBERS BY HUMAN SUBJECTS D1-82-0821 N69-21390

**PRESSURE BREATHING**  
CONTINUOUS POSITIVE-PRESSURE BREATHING IN ACUTE HEMORRHAGIC EDEMA IN DOGS A69-80774

**PRESSURE CHAMBERS**  
DISCHARGE RATES OF METABOLIC PRODUCTS IN MEN CONFINED IN PRESSURE CHAMBER WEARING AIRTIGHT SUITS AND GAS MASKS A69-23508

**PRESSURE EFFECTS**  
OXYGEN AND CARBON MONOXIDE EQUILIBRIA OF HUMAN HEMOGLOBIN AT ELEVATED PRESSURE WITH AND WITHOUT NITROGEN-SUBSTITUTED HELIUM A69-80920

EFFECTS OF HIGH AND LOW BAROMETRIC PRESSURES ON SUSCEPTIBILITY AND RESISTANCE TO INFECTION IN MICE NASA-CR-100360 N69-20009

**PRESSURE SUITS**  
MOISTURE LOSSES OF MEN WEARING PARTIAL PRESSURE SUIT WITH OXYGEN MASK DETERMINED BY CHANGES IN SKIN TEMPERATURE AND HEAT FLOW A69-23591

PORTABLE BATTERY OF TESTS TO ASSESS HUMAN MOBILITY IN FULL PRESSURE SUITS AD-680825 N69-20385

ENGINEERING DESIGN STUDY OF SPACE SUIT WITH INTEGRATED ENVIRONMENTAL CONTROL SYSTEM AD-680826 N69-20386

CLEARANCE, STRENGTH, AND PERFORMANCE DATA FOR BARE-HANDED AND PRESSURE-GLOVED OPERATORS AD-681457 N69-21843

**PRIMATES**  
PRIMATES FOR SPACE RESEARCH, DISCUSSING SELECTION, PURCHASE, HANDLING AND USE AS CONTROLS IN OBSERVATIONS OF DISORDERS EXPERIENCED BY MAN A69-22723

DISCUSSION ON ADVANTAGES OFFERED BY UTILIZATION OF PRIMATES IN SPACE RESEARCH A69-80892

**PROBABILITY DISTRIBUTION FUNCTIONS**  
PROBABILITY MODEL FOR FLIGHT CREW DEPLOYMENT AD-680763 N69-20134

**PROBABILITY THEORY**  
PROBLEM OF TEACHING MACHINES TO IDENTIFY EXTERNAL SITUATIONS USING POTENTIAL AND PROBABILITY THEORIES AD-681674 N69-21711

**PROBLEM SOLVING**  
SELECTIVITY AND RELEVANCY OF DATA IN PROBLEM SOLVING A69-80797

DYNAMIC MANIPULATION OF HEURISTICS AS PRODUCTION RULES FOR COMPUTER PROGRAMS, AND PROBLEM SOLVING MACHINE LEARNING AD-681027 N69-20483

**PROCEDURES**  
EVALUATION OF TWO ATRAUMATIC METHODS OF DETERMINATION OF CARDIAC OUTPUT IN MAN - SIMULTANEOUS RECORDING OF CAROTID AND FEMORAL PULSE AND IMPEDANCE PLETHYSMOGRAPHY A69-80899

MEASUREMENT OF TRACKING PROFICIENCY A69-80919

SIMPLE PROCEDURE FOR UNDERWATER HARDWARE ELECTROCARDIOGRAM RECORDING A69-80938

**PROPRIOCEPTION**  
PROPRIOCEPTION VARIABLE AS DETERMINANTS OF LAPSED TIME ESTIMATION A69-80931

**PROSTHETIC DEVICES**  
DESIGN ASPECTS OF EXPERIMENTAL FLUIDIC CONTROL SYSTEM PB-180954 N69-21174

**PROTECTIVE CLOTHING**  
RANQUE VORTEX TUBE AS COOLING DEVICE IN VENTILATING GARMENT MA-3 A69-22550

**PROTEIN METABOLISM**  
NITROGEN COMPOUNDS EXCRETION FROM WHOLE-BODY GAMMA IRRADIATED RAT LARGE INTESTINE IN ABSENCE OF STRESS NIJS-R-544 N69-21146

PROTEINS

SUBJECT INDEX

PROTEINS

HYDROGENOMONAS EUTROPHA AS MEANS OF PROTEIN FOOD SOURCE INDEPENDENT OF CONVENTIONAL AGRICULTURE FOR ANIMAL FEED SUPPLEMENT A69-23306

TRYPTIC DIGESTION OF C TERMINAL TRITIATED PEPTIDES ANALYZED WITH SCENEDESMUS FERRODOXIN, NOTING USE FOR PROTEIN STRUCTURAL STUDY A69-24190

ALTERNATING DIETS OF HIGHER AND LOWER ENERGIES OR PROTEIN IN RATS ON METABOLIC ASPECTS A69-80842

STRUCTURE AND FUNCTION OF CHLOROPLAST PROTEINS - RIBULOSE-1,5-DIPHOSPHATE CARBOXYLASE OF CHLORELLA ELLIPSOIDEA A69-80922

PROTON BEAMS

RADIATION EFFECTS FROM PROTON BEAMS IN RHESUS MONKEYS USING HEMATOLOGY STUDIES AD-681465 N69-21528

PROTON IRRADIATION

MICROVILLAR BLEB FORMATION IN PROTON IRRADIATED PRIMATE HEPATOCYTES WITH ELECTRON MICROSCOPE, NOTING SINUSOIDAL LUMEN A69-23045

PSYCHOLOGICAL EFFECTS

MACAQUE MONKEYS IN WEIGHTLESS STATE ON SOUNDING ROCKET, NOTING VIGILANCE LEVEL AND CHARACTERISTICS A69-22724

STATUS OF RESEARCH IN BIOASTRONAUTICS IN 1967 - REVIEW A69-80890

PSYCHOLOGICAL FACTORS

SERIAL ACCURACY OF SEQUENTIAL RESPONSES IN PSYCHOPHYSIOLOGICAL THRESHOLD MEASUREMENTS IZF-1968-21 N69-21474

PSYCHOMOTOR PERFORMANCE

MILD HYPOXIA EFFECT ON SELECTIVE ATTENTION PERFORMANCE OF HUMAN SUBJECTS AT SIMULATED 8000 FT ALTITUDE A69-22553

PSYCHOMOTOR REACTION TIME AND MOTIONS, MYOGENIC TONUS AT REST AND PRECISION OF MONKEYS DURING ROCKET FLIGHTS ALONG BALLISTIC CURVE, NOTING WEIGHTLESSNESS EFFECT A69-23575

REVIEW AND ANALYSIS OF MOVEMENT CONTROL IN SKILLED MOTOR PERFORMANCE A69-80844

REVIEW OF RECENT EVIDENCE CONCERNING ROLE OF ANTICIPATION AND TIMING IN HUMAN MOTOR PERFORMANCE A69-80847

RELATIONSHIP OF HYPNOSIS AND MOTIVATION ON PSYCHOMOTOR PERFORMANCE IN EXTREME HEAT A69-80870

EFFECT OF WEIGHTLESSNESS ON MACAQUE PHYSIOLOGICAL PARAMETERS AND PSYCHOMOTOR PERFORMANCE IN ROCKET FLIGHT A69-80893

OBSERVATIONS SUGGESTING PRESERVATION OF SKILLED MOTOR ACTS DESPITE DRUG-INDUCED STRESS A69-80925

PULMONARY CIRCULATION

DIRECT EFFECT OF NOREPINEPHRINE AND ANGIOTENSIN ON PULMONARY VEINS OF INTACT DOGS A69-80761

THEORY OF BLOOD FLOW IN CAPILLARIES OF CAT LUNG ALVEOLI A69-80779

PULMONARY FUNCTIONS

VENTILATION-PERFUSION RELATIONSHIPS IN OBESE HUMANS OF BOTH SEXES A69-80773

HEMODYNAMIC EFFECTS OF CHANGES IN BLOOD VOLUME DURING INTERMITTENT POSITIVE-PRESSURE VENTILATION A69-80818

VENTILATORY MECHANICS AND EXPIRATORY FLOW LIMITATION DURING EXERCISE IN NORMAL SUBJECTS A69-80907

PULMONARY LESIONS

PATHOGENESIS AND REVERSIBILITY OF PULMONARY LESIONS OF OXYGEN TOXICITY IN MONKEYS - CLINICAL AND LIGHT MICROSCOPIC STUDIES A69-80801

PATHOGENESIS AND REVERSIBILITY OF PULMONARY LESIONS OF OXYGEN TOXICITY IN MONKEYS A69-80802

PULSE DURATION

IMPULSE DURATION AND TEMPORARY THRESHOLD SHIFT IN RELATION TO HEARING LOSSES AD-680916 N69-20259

PULSE RATE

HUMAN PHYSIOLOGY FOR EXPOSURE TO ACUTE HYPOXIA STUDIED WITH VARIATION PULSOGRAMS AND INDICES OF EXTERNAL RESPIRATION AND PULMONARY GAS EXCHANGE A69-23592

EFFECT OF POSTURAL CHANGES ON TONUS IN MAIN ARTERIAL VASCULAR SYSTEM IN MAN A69-80857

PULSED LASERS

LASER-INDUCED CHANGES IN ELECTRORETINOGRAPHY OF MANGABEY AD-680913 N69-20360

EYE SAFETY NOMOGRAPHS OF PULSED LASER RETINAL DAMAGE PROBABILITIES AD-681906 N69-21690

PULSED RADIATION

EFFECTS OF PULSED IONIZING RADIATION ON MONKEYS IN EQUILIBRIUM PLATFORM TASK AD-680748 N69-20361

PUPIL SIZE

LATENCY VARIATION IN HUMAN PUPIL CONTRACTION DUE TO STIMULUS LUMINANCE AND/OR ADAPTATION LEVEL A69-80824

PURSUIT TRACKING

SIGNAL DETECTION AFFECTED BY SACCADIC EYE MOVEMENT IN PURSUIT TRACKING TASK A69-80950

Q

QUANTITATIVE ANALYSIS

METHODS AND APPLICATIONS OF QUANTITATIVE COMPUTER ANALYZED SCANNING USING VARIOUS RADIOISOTOPES NYO-910-76-APP-1 N69-19819

R

RABBITS

PULSED AND CW MICROWAVE POWER EFFECTS ON RABBIT EYES, NOTING LENS OPACITIES PRODUCED A69-23185

EVALUATION OF PROLIFERATIVE AND MATURATIVE ACTIVITY ON RABBIT BONE MARROW DURING BENZENE INTOXICATION A69-80759

CORRELATION BETWEEN BODY TEMPERATURE AND OXYGEN CONSUMPTION VARIATIONS IN NORMAL AND FURLESS RABBITS IN INITIAL PERIODS OF ADAPTATION TO MODERATELY LOW TEMPERATURE ENVIRONMENT A69-80859

EFFECT OF INCREASED PRESSURE ON INTRA-OCULAR PRESSURE AND AQUEOUS DYNAMICS A69-80916

INPUT-OUTPUT RELATIONS OF OPTOKINETIC EYE MOVEMENTS IN RABBITS SUBJECTED TO CONSTANT ROTATION OR SINUSOIDAL MOVEMENT OF SURROUNDINGS A69-80945

CLINICAL AND ELECTROPHORETIC ANALYSIS OF LASER INDUCED CATARACTS IN IRRADIATED RABBITS EYE LENSES AD-681899 N69-21533

RADIATION DOSAGE

ABSORBED RADIATION DOSES OF ASTRONAUTS DURING SPACE FLIGHT

## SUBJECT INDEX

RATS

REVIEWING

SUBJECT INDEX

MONOCULAR ESTIMATES OF DISTANCE AND DIRECTION WITH STABILIZED AND NON-STABILIZED RETINAL IMAGES A69-80944

**REVIEWING**  
 REVIEW AND EVALUATION OF INVESTIGATION OF LASER-INDUCED ACOUSTIC BREAKAGE OF TOBACCO MOSAIC VIRUS A69-80826  
 REVIEW OF CURRENT PROBLEMS IN HIGH ALTITUDE PHYSIOLOGY A69-80839  
 REVIEW AND ANALYSIS OF MOVEMENT CONTROL IN SKILLED MOTOR PERFORMANCE A69-80844  
 REVIEW OF METHODS, FINDINGS, AND THEORIES IN STUDIES OF VISUAL MASKING A69-80845  
 REVIEW OF EXPLANATIONS OF GEOMETRICAL ILLUSIONS A69-80846  
 REVIEW OF RECENT EVIDENCE CONCERNING ROLE OF ANTICIPATION AND TIMING IN HUMAN MOTOR PERFORMANCE A69-80847  
 REVIEW OF THEORETICAL AND EXPERIMENTAL RESEARCH ON REVERSAL OF SIMULTANEOUS LIGHTNESS-CONTRAST A69-80848

**REWARD (PSYCHOLOGY)**  
 EFFECTS OF D-AMPHETAMINE ON MENTAL-TASK-ALTERNATION AND UTILITY OF DELAYED REWARD A69-80790

**RHYTHM (BIOLOGY)**  
 DEVELOPMENT AND PERFORMANCE OF RESPIROMETERS FOR BIORHYTHMIC STUDIES OF GRAVITY EFFECTS NASA-CR-100413 N69-20909

**RIBONUCLEIC ACIDS**  
 POLY A-POLY U SYNTHESIZED BY AZOTOBACTER VINELANDI RNA POLYMERASE IN UNPRIMED REACTION CONTAINING ATP AND UTP, FOLLOWING SHORT LAG PERIOD A69-24185  
 DETERMINATION OF FREE PHOSPHATE GROUPS IN E. COLI RIBOSOMES BY OPTICAL METHODS NASA-TT-F-12118 N69-21080

**ROCKET FLIGHT**  
 PSYCHOMOTOR REACTION TIME AND MOTIONS, MYOGENIC TONUS AT REST AND PRECISION OF MONKEYS DURING ROCKET FLIGHTS ALONG BALLISTIC CURVE, NOTING WEIGHTLESSNESS EFFECT A69-23575  
 EFFECT OF WEIGHTLESSNESS ON MACAQUE PHYSIOLOGICAL PARAMETERS AND PSYCHOMOTOR PERFORMANCE IN ROCKET FLIGHT A69-80893

**ROCKET NOSE CONES**  
 PLANNING AND DEVELOPMENT OF SCIENTIFIC PAYLOAD OF NOSE CONES DESIGNED TO STUDY WEIGHTLESSNESS AND HIGH ALTITUDE ENVIRONMENTS EFFECT IN MONKEYS A69-80891

**ROCKET PROPELLANTS**  
 MEDICAL EXAMINATIONS OF MISSILE FUEL HANDLERS, NOTING SOME ABNORMAL RESULTS IN LIVER FUNCTION TESTS AND POSSIBLE HYDRAZINE TOXICITY A69-22556

**RODENTS**  
 COMPUTER ANALYSIS OF CORTICAL AND SUBCORTICAL ACTIVITY IN YELLOW BELLIED HARMOT DURING SLEEP, HIBERNATION AND HYPOTHERMIA A69-23122  
 LEARNED BEHAVIOR PERFORMANCE FAILURE IN HYPOTHERMIA AS TEMPERATURE DEPENDENT PHENOMENON USING RAT, GUINEA PIG, CHINCHILLA, MOUSE, GERBIL AND HAMSTER A69-23124  
 CHANGES IN VENTRICULAR CONTRACTILITY IN NUTRIAS DURING ASPHYXIA WHILE SUBMERGED IN WATER A69-80879  
 SOMATIC CHROMOSOMES STUDY OF MONGOLIAN GERBILS NASA-CR-100458 N69-21149

**ROTATION**  
 INPUT-OUTPUT RELATIONS OF OPTOKINETIC EYE MOVEMENTS IN RABBITS SUBJECTED TO CONSTANT ROTATION OR SINUSOIDAL MOVEMENT OF SURROUNDINGS A69-80945

**ROTOR BLADES (TURBOMACHINERY)**  
 PERFORMANCE AND CAVITATION DAMAGE TO AXIAL FLOW PUMP ROTOR BLADES IN HIGH TEMPERATURE LIQUID SODIUM NASA-TN-D-5138 N69-21773

**RUBIDIUM 86**  
 VALIDATION OF METHOD FOR BLOOD FLOW IN ADIPOSE TISSUE OF RATS BY CLEARANCE OF RUBIDIUM 86 A69-80784

S

**SAFETY**  
 EYE SAFETY NOMOGRAPHS OF PULSED LASER RETINAL DAMAGE PROBABILITIES AD-681906 N69-21690

**SAFETY FACTORS**  
 CALCULATION OF SAFE SEPARATION DISTANCES FOR HUMAN FROM NUCLEAR EXPLOSION TO PREVENT FLASH BLINDNESS AND RETINAL BURN AD-680842 N69-20288

**SAMPLING**  
 CONTINUOUS AUTOMATED SAMPLING TECHNIQUE FOR DETERMINING METABOLIC STATE OF LEFT VENTRICLE A69-80781

**SATELLITE OBSERVATION**  
 VISUAL OBSERVATION OF AEROSPACECRAFT, DISCUSSING OBJECT LUMINANCE, EYE CONTRAST SENSITIVITY, ATMOSPHERIC CONTRAST TRANSMISSION FUNCTION AND PSYCHOPHYSIOLOGICAL AND ATMOSPHERIC EFFECTS A69-23872

**SATURATION**  
 THEORY OF BODY TISSUE GAS SATURATION AND DESATURATION IN LINEAR EQUATIONS DEVELOPED IN TERMS OF ELECTRICAL ANALOGS DRET-620 N69-21406

**SCANNERS**  
 TRANSMISSION SCANNING WITH TECHNETIUM 99 AND CESIUM 137 COO-1422-24 N69-19635

**SCANNING**  
 METHODS AND APPLICATIONS OF QUANTITATIVE COMPUTER ANALYZED SCANNING USING VARIOUS RADIOISOTOPES NYO-910-76-APP-1 N69-19819

**SCENEDESMUS**  
 TRYPTIC DIGESTION OF C TERMINAL TRITIATED PEPTIDES ANALYZED WITH SCENEDESMUS FERRODOXIN, NOTING USE FOR PROTEIN STRUCTURAL STUDY A69-24190

**SEDATIVES**  
 SLEEP PATTERNS IN HUMANS AFTER SINGLE DOSE OF SECOBARBITAL A69-80924

**SEEDS**  
 CHANGE IN CONTENT OF DRY MATTER, SUGARS AND ASCORBIC ACID IN PLANTS AFTER ACTION OF SPACE FLIGHT FACTORS ON SEEDS OF THESE PLANTS A69-23495

**SENSITIVITY**  
 RADIATION SENSITIVITY OF DROSOPHILA EMBRYOS IN RELATION TO AGE, IRRADIATION IN AIR, AND IN NITROGEN A69-80820  
 FOURIER TRANSFORMATIONS APPLICATIONS ON CONTRAST SENSITIVITY FUNCTIONS OF HUMAN EYES IZF-1968-20 N69-21343

**SENSORIMOTOR PERFORMANCE**  
 COUPLING EFFECTS AND PERFORMANCE IN AUDITORY AND VISUAL VIGILANCE TASKS AD-680912 N69-20236

## SUBJECT INDEX

## SOCIAL ISOLATION

TASKS A69-80930

COUPLING EFFECTS AND PERFORMANCE IN AUDITORY AND  
VISUAL VIGILANCE TASKS  
AD-680912 N69-20236

## VORTICES

RANQUE VORTEX TUBE AS COOLING DEVICE IN MA-3  
VENTILATING GARMENT A69-22550

## VOWELS

VOWEL RECOGNITION THRESHOLD AS FUNCTION OF  
TEMPORAL SEGMENTATION N69-20826

## W

## WAKEFULNESS

SLEEP AND WAKEFULNESS IN SHIFT WORKERS AND  
NON-SHIFT WORKERS A69-80821

## WASTE DISPOSAL

REACTORS TECHNICAL CHARACTERISTICS FOR HIGH  
TEMPERATURE MINERALIZATION OF CLOSED LIFE SYSTEMS  
BIOLOGICAL WASTES, DERIVING EQUATIONS TO ESTIMATE  
ENERGY BALANCE A69-23504

MINIATURIZED ACTIVATED SLUDGE PROCESS FOR  
TREATING CONCENTRATED HUMAN WASTES IN CLOSED  
ECOLOGICAL SYSTEM  
AD-681127 N69-20651

METABOLIC CHARACTERISTICS OF BACTERIA PRESENT IN  
ACTIVATED SLUDGE OF CLOSED ECOLOGICAL SYSTEMS  
AD-681126 N69-20667

HORIZONTAL JET DILUTION STUDIES OF WASTE DISPOSAL  
BY USE OF RADIOACTIVE ISOTOPES  
PB-180787 N69-21896

## WATER

GAS VACUOLES DEVELOPMENT IN BLUE GREEN ALGAE BY  
CELL TRANSFER FROM DEFINED MEDIUM TO DISTILLED  
WATER A69-23184

## WATER LOSS

MOISTURE LOSSES OF MEN WEARING PARTIAL PRESSURE  
SUIT WITH OXYGEN MASK DETERMINED BY CHANGES IN  
SKIN TEMPERATURE AND HEAT FLOW A69-23591

## WATER VAPOR

WATER VAPOR REMOVAL SYSTEM FOR MANNED SPACECRAFT  
CABIN ENVIRONMENT CONTROL USING SILICA GLASS  
AD-681164 N69-20536

## WAVE DISPERSION

HEAT DEVELOPMENT MEASUREMENTS ON WHITE AND GREEN  
FLIGHT HELMETS  
TOCK-52198-III N69-21707

## WEIGHT MEASUREMENT

UNDERWATER WEIGHING SYSTEM USING TRANSDUCERS IN  
DETERMINING BODY COMPOSITION A69-80887

## WEIGHTING FUNCTIONS

COMPARISON OF WEIGHTING FORMULAS FOR CALCULATING  
MEAN SKIN TEMPERATURE IN MAN A69-80885

OUTPUT ESTIMATES FOR AUTOMATA AND OPTIMIZATION OF  
LEARNING MACHINES WITH UNEQUAL INPUTS  
JPRS-47617 N69-21232

## WEIGHTLESSNESS

ANIMALS IN WEIGHTLESS STATE, NOTING VIGILANCE,  
ATTENTION, SENSORIAL AND MOTOR REACTION TIME,  
MUSCULAR TONE AT REST AND MUSCLES ELECTRICAL  
ACTIVITY IN MOVEMENT A69-22721

## SUBJECT INDEX

MONKEY BEHAVIOR IN HIGH ATMOSPHERE UNDER  
WEIGHTLESS CONDITIONS, DISCUSSING PROBLEMS  
CONNECTED WITH BIOLOGICAL MEASUREMENTS, LOGIC  
SYSTEMS AND VIBRATION PROTECTION A69-22722

MACAQUE MONKEYS IN WEIGHTLESS STATE ON SOUNDING  
ROCKET, NOTING VIGILANCE LEVEL AND CHARACTERISTICS  
A69-22724

EFFECT OF GRAVITATION AND WEIGHTLESSNESS ON BONE  
MARROW STRUCTURE IN VERTEBRATES A69-80865

STATUS OF RESEARCH IN BIOASTRONAUTICS IN 1967 -  
REVIEW A69-80890

EFFECT OF WEIGHTLESSNESS ON MACAQUE PHYSIOLOGICAL  
PARAMETERS AND PSYCHOMOTOR PERFORMANCE IN  
ROCKET FLIGHT A69-80893

PHYSIOLOGICAL PROBLEMS DURING PROLONGED  
WEIGHTLESSNESS  
NASA-TT-F-12100 N69-20169

MUSCLE FUNCTION AND SPACE FLIGHT ENVIRONMENTS OF  
WEIGHTLESSNESS AND ACCELERATION  
AD-680801 N69-20371

MOTION SICKNESS SUSCEPTIBILITY UNDER WEIGHTLESS  
AND HYPERGRAVITY CONDITIONS GENERATED BY  
PARABOLIC FLIGHT  
NASA-CR-100462 N69-21200

HUMAN MOTION SICKNESS SUSCEPTIBILITY WHEN EXPOSED  
TO CORIOLIS ACCELERATIONS DURING PARABOLIC  
FLIGHT WEIGHTLESSNESS  
NASA-CR-100502 N69-21386

## WEIGHTLESSNESS SIMULATION

SIMULATED WEIGHTLESSNESS USED IN DETERMINING  
ONTOGENESIS OF OTOLITH ORGAN IN TADPOLES AND EGGS  
AS FUNCTION OF ACCELERATION FORCES  
DVL-855 A69-24021

CORRELATION STUDY OF SIMULATION OF GEMINI  
EXTRAVEHICULAR ACTIVITY WITH FLIGHT RESULTS  
NASA-CR-1146 N69-19902

SIMULATED MANUAL PACKAGE TRANSFER IN WEIGHTLESS  
ENVIRONMENT OF SATURN ORBITAL SPACE STATION  
NASA-TN-D-5111 N69-21501

## WORDS (LANGUAGE)

PHONETICS OF AFRICAN DIALECT N69-20001

## WORK CAPACITY

ACCLIMATION TO ALTITUDE HYPOXIA AND DURATION OF  
RESISTANCE TO MUSCULAR EFFORT IN WHITE WISTAR  
RATS ON TREADMILL A69-22725

## WORK-REST CYCLE

RELATIONSHIP BETWEEN EFFICIENCY DURING MENTAL  
TASKS AND CIRCADIAN RHYTHM OF BODY TEMPERATURE  
AFFECTED BY CHANGE IN WORK-REST CYCLE A69-80929

## X

## X RAY IRRADIATION

X RAY IRRADIATED DOGS SUBJECTED TO HEAT STRESSES  
TO DETERMINE THERMOREGULATORY ABILITY A69-22548

RADIATION SENSITIVITY OF DROSOPHILA EMBRYOS  
IN RELATION TO AGE, IRRADIATION IN AIR, AND  
IN NITROGEN A69-80820

BEHAVIORAL AND CIRCULATORY RESPONSE TO X RAY  
IRRADIATION IN MONKEYS  
AD-680843 N69-20138

## XENON 133

EFFECT OF INSPIRATORY FLOW RATE ON REGIONAL  
DISTRIBUTION OF INSPIRED GAS IN HUMANS AS  
MEASURED BY XENON 133 A69-80775

Y

YTTRIUM

USE OF CERENKOV EFFECT IN DETECTION AND ASSAY OF  
BETA-EMITTING RADIONUCLIDES IN BIOLOGICAL  
SPECIMENS  
EUR-4084.F N69-21079

Z

ZIRCONIUM 95

METABOLISM AND INTERNAL DECONTAMINATION OF  
RADIOACTIVE ZIRCONIUM-NIOBIUM SALTS  
CEA-R-3703 N69-19760

# Corporate Source Index

AEROSPACE MEDICINE AND BIOLOGY / a continuing bibliography

JUNE 1969

## Typical Corporate Source Index Listing

AEROSPACE MEDICAL DIV. AEROSPACE MEDICAL RESEARCH LABS. /6570TH/, WRIGHT-PATTERSON AFB, OHIO.

A Notation of Content rather than the title of the document appears under each corporate source. The accession number is located beneath and to the right of the Notation of Content e.g. N69-12345. Under any one corporate source the accession numbers are arranged in sequence.

## A

AEROSPACE MEDICAL DIV. AEROMEDICAL RESEARCH LAB. /6571ST/, HOLLOMAN AFB, N. MEX.

AUDITORY SENSITIVITY OF RHESUS AND WHITE THROATED CAPUCHIN MONKEYS DETERMINED BY COMPARISON OF CONDITIONED SUPPRESSION, GALVANIC SKIN, AND EVOKED CORTICAL RESPONSES  
AD-681135 N69-20679

AEROSPACE MEDICAL DIV. AEROSPACE MEDICAL RESEARCH LABS. /6570TH/, WRIGHT-PATTERSON AFB, OHIO.

CLEARANCE, STRENGTH, AND PERFORMANCE DATA FOR BARE-HANDED AND PRESSURE-GLOVED OPERATORS  
AD-681457 N69-21843

AEROSPACE MEDICAL RESEARCH LABS., WRIGHT-PATTERSON AFB, OHIO.

MUSCLE FUNCTION AND SPACE FLIGHT ENVIRONMENTS OF WEIGHTLESSNESS AND ACCELERATION  
AD-680801 N69-20371

VISUAL SEARCH AND DETECTION UNDER SIMULATED FLARE LIGHT  
AD-681129 N69-20509

AIR FORCE SYSTEMS COMMAND, WRIGHT-PATTERSON AFB, OHIO.

FLOW CALCULATION AROUND BLUNTED CONES FOR SUPERSONIC STREAM OF AIR USING METHOD OF CHARACTERISTICS  
AD-681268 N69-20441

TRANSFORMATION ALGORITHM FOR VISUAL AND AUDIO SPACES IN IMAGE TO SOUND CONVERSION  
AD-681260 N69-20447

PROBLEM OF TEACHING MACHINES TO IDENTIFY EXTERNAL SITUATIONS USING POTENTIAL AND PROBABILITY THEORIES  
AD-681674 N69-21711

PATTERN AND SPEECH RECOGNITION PROBLEMS USING MATHEMATICAL MODELS  
AD-681809 N69-21749

STATISTICAL ANALYSIS AND FORM RECOGNITION PROBLEM  
AD-682066 N69-21836

AKTIEBOLAGET ATOMENERGI, STOCKHOLM /SWEDEN/. DOSIMETRY OF GAMMA RADIATION EXPOSURE OF PERSONNEL

AE-342

N69-21310

APPLIED PSYCHOLOGICAL SERVICES, WAYNE, PA. PORTABLE BATTERY OF TESTS TO ASSESS HUMAN MOBILITY IN FULL PRESSURE SUITS  
AD-680825 N69-20385

ARMED FORCES RADIOBIOLOGY RESEARCH INST., BETHESDA, MD.

EFFECT OF MIXED GAMMA-NEUTRON RADIATIONS ON SPECTRAL ABSORPTION OF INDOCYANINE GREEN  
AD-681372 N69-20703

ARMY FOREIGN SCIENCE AND TECHNOLOGY CENTER, WASHINGTON, D. C.

MICROORGANISM GROWTH WITH PETROLEUM FUELS  
AD-680804 N69-20205

ARMY MEDICAL RESEARCH LAB., FORT KNOX, KY.

COUPLING EFFECTS AND PERFORMANCE IN AUDITORY AND VISUAL VIGILANCE TASKS  
AD-680912 N69-20236

IMPULSE DURATION AND TEMPORARY THRESHOLD SHIFT IN RELATION TO HEARING LOSSES  
AD-680916 N69-20259

LASER-INDUCED CHANGES IN ELECTRORETINOGRAPHY OF MANGABEY  
AD-680913 N69-20360

CORNEAL INJURY PRODUCED BY CARBON DIOXIDE LASER RADIATION  
AD-680915 N69-20524

CLINICAL AND ELECTROPHORETIC ANALYSIS OF LASER INDUCED CATARACTS IN IRRADIATED RABBITS EYE LENSES

# Personal Author Index

## Typical Personal Author Index Listing

A Notation of Content rather than the title of the document appears under each author's name. The accession number is located beneath and to the right of the Notation of Content e.g. N69-12345. Under any one author's name the accession numbers are arranged in sequence.

## A

- ABELMANN, W. H.**  
 BED REST EFFECT ON ORTHOSTATIC TOLERANCE OF PATIENTS WITH ACUTE MYOCARDIAL INFARCTION AND WITHOUT HEART FAILURE  
 A69-24189
- ABRIKOSOVA, M. A.**  
 LONG TERM HYPOKINESIA EFFECT ON CARDIOVASCULAR SYSTEM OF ATHLETES INDICATING HUMAN ORTHOSTATIC RESISTANCE INCREASE DUE TO PHYSICAL EXERCISES  
 A69-23581
- EFFECT OF POSTURAL CHANGES ON TONUS IN MAIN ARTERIAL VASCULAR SYSTEM IN MAN  
 A69-80857
- ADAMS, C. K.**  
 LASER-INDUCED CHANGES IN ELECTRORETINOGRAPHY OF MANGABEY  
 AD-680913  
 N69-20360
- ADAMS, T.**  
 MODIFICATION OF SKIN MECHANICAL PROPERTIES BY SWEAT GLAND ACTIVITY OF ANESTHETIZED CATS CONTROLLED BY ELECTRICAL STIMULATION OF MEDIAL PLANTAR NERVE  
 A69-80772
- ADER, R.**  
 PLASMA CORTICOSTERONE RESPONSE TO ENVIRONMENTAL STIMULATION - EFFECT OF DURATION OF STIMULATION OF 24 HOUR ADRENOCORTICAL RHYTHM IN RATS  
 A69-80822
- AGID, R.**  
 GLUCOSE, LACTATE, FREE FATTY ACIDS, HEPATIC GLYCOGEN AND ENDOCRINE ACTIVITY IN FASTING HIBERNATING DORMOUSE AND RAT IN DEEP HYPOTHERMIA  
 A69-23118
- AGREST, A.**  
 ACETYLCHOLINE CONTENT IN CENTRAL NERVOUS SYSTEM OF RATS WITH CHRONIC HYPERCAPNIA  
 A69-80756
- AKAZAWA, T.**  
 STRUCTURE AND FUNCTION OF CHLOROPLAST PROTEINS - RIBULOSE-1,5-DIPHOSPHATE CARBOXYLASE OF CHLORELLA ELLIPSOIDEA  
 A69-80922
- AKERS, R.**  
 UNDERWATER WEIGHING SYSTEM USING TRANSDUCERS IN DETERMINING BODY COMPOSITION  
 A69-80887
- ALBRIGHT, M. L.**  
 HYPOTHERMIA INDUCED ALTERATIONS IN BIOCHEMICAL PROCESSES STUDIED WITH ISOLATED RAT LIVER PERFUSED AT LOW TEMPERATURE  
 A69-23119
- ALEKSANDROV, S. N.**  
 EFFECT OF MEDULLARY AUTOTRANSPLANTATION ON SURVIVAL OF MICE EXPOSED TO VARIOUS DOSAGE OF IONIZING RADIATION  
 A69-80863
- ALEKSANDROVA, I. V.**  
 MINERAL NUTRITION ELEMENTS CONCENTRATION STABILIZATION BY CORRECTING SOLUTION ADDITIONS DURING PROLONGED CHLORELLA CULTIVATION WITH MEDIUM RECYCLING  
 A69-23579
- ALEKSEENKO, N. IU.**  
 EVOKED POTENTIALS TO SOUNDS OF DIFFERENT DIRECTIONS IN AUDITORY CORTEX OF CATS  
 A69-80810
- ALFIMOVA, E. IA.**  
 MODEL OF NITROGEN FIXATION SYSTEM TO STUDY DEPENDENCE OF HYDROGEN LIBERATION ON TEMPERATURE IN CELL-FREE CULTURES OF AZOTOBACTER VINELANDII  
 A69-80862
- ALIUKHIN, IU. S.**  
 CORRELATION BETWEEN BRAIN ELECTRICAL ACTIVITY AND CHANGES IN ENVIRONMENTAL OXYGEN TENSIONS IN RATS DURING HYPOTHERMIA  
 A69-80854
- ALLEN, R. G.**  
 CALCULATION OF SAFE SEPARATION DISTANCES FOR HUMAN FROM NUCLEAR EXPLOSION TO PREVENT FLASH BLINDNESS AND RETINAL BURN  
 AD-680842  
 N69-20288
- ALSIP, J. E.**  
 STIMULUS DETECTION DURING PERIODS OF HIGH AND LOW HEART RATE  
 A69-80837
- AMBID, L.**  
 GLUCOSE, LACTATE, FREE FATTY ACIDS, HEPATIC GLYCOGEN AND ENDOCRINE ACTIVITY IN FASTING HIBERNATING DORMOUSE AND RAT IN DEEP HYPOTHERMIA  
 A69-23118
- ANGEL, R.**  
 SIGNAL DETECTION AFFECTED BY SACCADIC EYE MOVEMENT IN PURSUIT TRACKING TASK  
 A69-80950
- ANTHONISEN, N. R.**  
 EFFECT OF INSPIRATORY FLOW RATE ON REGIONAL DISTRIBUTION OF INSPIRED GAS IN HUMANS AS MEASURED BY XENON 133  
 A69-80775
- ANTON-TAY, F.**  
 REGIONAL UPTAKE OF MELATONIN FROM BLOOD OR CEREBROSPINAL FLUID BY RAT BRAIN  
 A69-21466
- ARNOLD, M. D.**  
 FRACTIONATION OF DISTANCE IN SPACE ENVIRONMENT SIMULATION  
 NASA-CR-73306  
 N69-20224
- ARP, H.**  
 DESIGN ASPECTS OF EXPERIMENTAL FLUIDIC CONTROL SYSTEM  
 PB-180954  
 N69-21174

## Collections of NASA Documents

NASA deposits its technical documents and bibliographic tools in eleven Federal Regional Technical Report Centers. Each center, located in one of the organizations listed below, is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service and assistance in obtaining copies of NASA documents for retention.

**California:** University of California,  
Berkeley

**Colorado:** University of Colorado,  
Boulder

**District of Columbia:** Library of Congress

**Georgia:** Georgia Institute of Technology,  
Atlanta

**Illinois:** The John Crerar Library, Chicago

**Massachusetts:** Massachusetts Institute  
of Technology, Cambridge

**Missouri:** Linda Hall Library, Kansas City

**New York:** Columbia University, New York

**Pennsylvania:** Carnegie Library of  
Pittsburgh

**Texas:** Southern Methodist University,  
Dallas

**Washington:** University of Washington,  
Seattle

NASA publications are currently being forwarded to the public libraries in the cities listed below:

**California:** Los Angeles and San Diego

**Colorado:** Denver

**Connecticut:** Hartford

**Massachusetts:** Boston

**Michigan:** Detroit

**Minnesota:** St. Paul and Minneapolis

**Missouri:** Kansas City and St. Louis

**New Jersey:** Trenton

**New York:** Brooklyn, Buffalo, Rochester, and  
New York

**Ohio:** Cleveland, Cincinnati, Dayton, Toledo,  
and Akron

**Oklahoma:** Oklahoma City

**Tennessee:** Memphis

**Texas:** Fort Worth and Dallas

**Washington:** Seattle

**Wisconsin:** Milwaukee

In addition, NASA regularly sends its publications to the Enoch Pratt Free Library in Baltimore, Maryland, and the Wilmington Institute Free Library, Wilmington, Delaware.

An extensive collection of NASA and NASA-sponsored scientific and technical publications available to the public for reference purposes is maintained at the Technical Information Service, American Institute of Aeronautics and Astronautics, 750 Third Avenue, New York, New York 10017.

*'The aeronautical and space activities of the United States shall be conducted so as to contribute to the expansion of human knowledge of phenomena in the atmosphere and space. The Administration shall provide for the widest practicable and appropriate dissemination of information concerning its activities and the results thereof.'*

— NATIONAL AERONAUTICS AND SPACE ACT OF 1958

## NASA SCIENTIFIC AND TECHNICAL PUBLICATIONS

**TECHNICAL REPORTS** Scientific and technical information considered important, complete, and a lasting contribution to existing knowledge

**TECHNICAL NOTES** Information less broad in scope but nevertheless of importance as a contribution to existing knowledge

**TECHNICAL MEMORANDUMS** Information receiving limited distribution because of preliminary data, security classification, or other reasons

**CONTRACTOR REPORTS** Scientific and technical information generated under a NASA contract or grant and considered an important contribution to existing knowledge

**TECHNICAL TRANSLATIONS** Information published in a foreign language considered to merit NASA distribution in English

**SPECIAL PUBLICATIONS** Information derived from or of value to NASA activities. Publications include conference proceedings, monographs, data compilations, handbooks, sourcebooks, and special bibliographies

**TECHNOLOGY UTILIZATION PUBLICATIONS** Information on technology used by NASA that may be of particular interest in commercial and other non-aerospace applications. Publications include Tech Briefs, Technology Utilization Reports and Notes, and Technology Surveys

*Details on the availability of these publications may be obtained from*
