

STRATFORD TREES

Advanced Wholesale Nursery

Eucalyptus scoparia

Common Name: '*Wallangara White Gum*'

Landscape value:

The Wallangara White Gum is a medium sized Australian native tree. It originates from the elevated areas of the Wallangarra area in Northern New South Wales.

It's an attractive gum with its smooth white bark and spreading crown that creates dappled shade effect.

This species is most suited to streetscapes and avenue plantings, or medium to large gardens.

Typical size: 11m x 8m

Growth rate: Fast to Moderate

Habit: Broad spreading crown has an open weeping habit

Foliage: Evergreen, narrow shiny green leaves

Flowers: Small white flowers appear in Spring and summer

Position: Full sun

Season of Interest: All seasons

Soil Type: Can tolerate most soils. Originates from areas of very poor gravelly soils

Tolerances/cultivation: It tolerates heat and dry conditions very well and urban compaction
